Tools and Services Activity Summary

BNLBox
- Evaluation (transfer time using curl from farm nodes) of ClamAV virus scanning software to determine effect on performance. Results will be presented at a future meeting.

ELK
- globus01 transfer logs are going to new elastic stack
- All bnlbox monitoring is sent to new elastic stack
- syslog from log01 - working on logstash parsing by service (squid, named, ns-slapd etc.)
- Evaluating additional services (dCache? Tape system?) for monitoring

Digital Repositories

- Ongoing InvenioRDM testing (latest alpha release)

Belle2 CDB
- Ongoing Json Web Token testing for access to CDB test infrastructure

Jira
- Creation of account to track NSLS-II activities
