Thoughts about the EIC computing work plan as a user

Xuan Li on behalf of the LANL team

- Computing resources:
  - We are in the simulation stage and need dedicated user space on the centralized computing (e.g., 5 TB user disk space on RACF facility).
  - Identified software team on the general computing libraries and user support.

- Computing organization.
  - Besides the BNL/Jlab computing teams, will there be a collaboration computing team after the EIC collaboration is formed.

- Computing user feedback forum.
  - Keep the user feedback forum to communicate the issues and request.

- Implementation on detector R&D tests.
  - Possibility to access high computing facility (e.g., FPGA, GPU developments) for detector R&D work?
