

# Simulation Statistics

By Sagar and Siddhant  
Under the guidance of Dr. Ankhi Roy

April 23, 2021

IIT Indore

# Contents

Histograms for verification of energy conservation (energy resolution, variation of aggregate cluster energy and aggregate tower energy with generated energy) for the following detector-particle pairs:

- FEMC: pion and electron
- FHCAL: pion
- FEMC + FHCAL: pion

# Simulation Parameters

- Particle:  $e^-$ ,  $\pi^-$
- Events: 100,000 per particle
- momentum ( $p$ ): 0 to 30 GeV/c
- Pseudorapidity ( $\eta$ ): -4 to 4
- Azimuth ( $\Phi$ ):  $-\pi$  to  $\pi$

## Cuts:

- detector-wise  $\eta$  cuts (intersection of  $\eta$  ranges in case of detector combinations)
- energy cuts in some plots

A teal-colored geometric graphic consisting of several overlapping triangles and quadrilaterals, creating a faceted, crystalline appearance. It is positioned on the left side of the slide.

**FEMC ( $e^-$ )**

energy cut:  $ce > 0.2$  GeV

# FEMC ( $e^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3

no energy cut

# FEMC ( $e^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3

no energy cut

# FEMC ( $e^-$ )

(ce-ge)/ge vs ge  
Explicit  $\eta$  cut: 1.3 to 3.3  
no energy cut

# FEMC ( $e^-$ )

( $ce-ge$ )/ $ge$  vs  $ge$   
Explicit  $\eta$  cut: 1.3 to 3.3

$\sigma_e$  refers to the standard deviation of the Gaussian fitted to a slice of the ( $ce-ge$ )/ $ge$  vs  $ge$  plot. (shown on the previous slide)

Number of bins = 20  
Bin Width = 1.5 GeV

Fit Parameters:

$$p_0 = (0.00989952 \pm 0.000836325)$$

$$p_1 = (0.0241553 \pm 0.00462100) \text{ GeV}^{0.5}$$

$$p_2 = (0.0268757 \pm 0.00559569) \text{ GeV}$$

# FEMC ( $e^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3

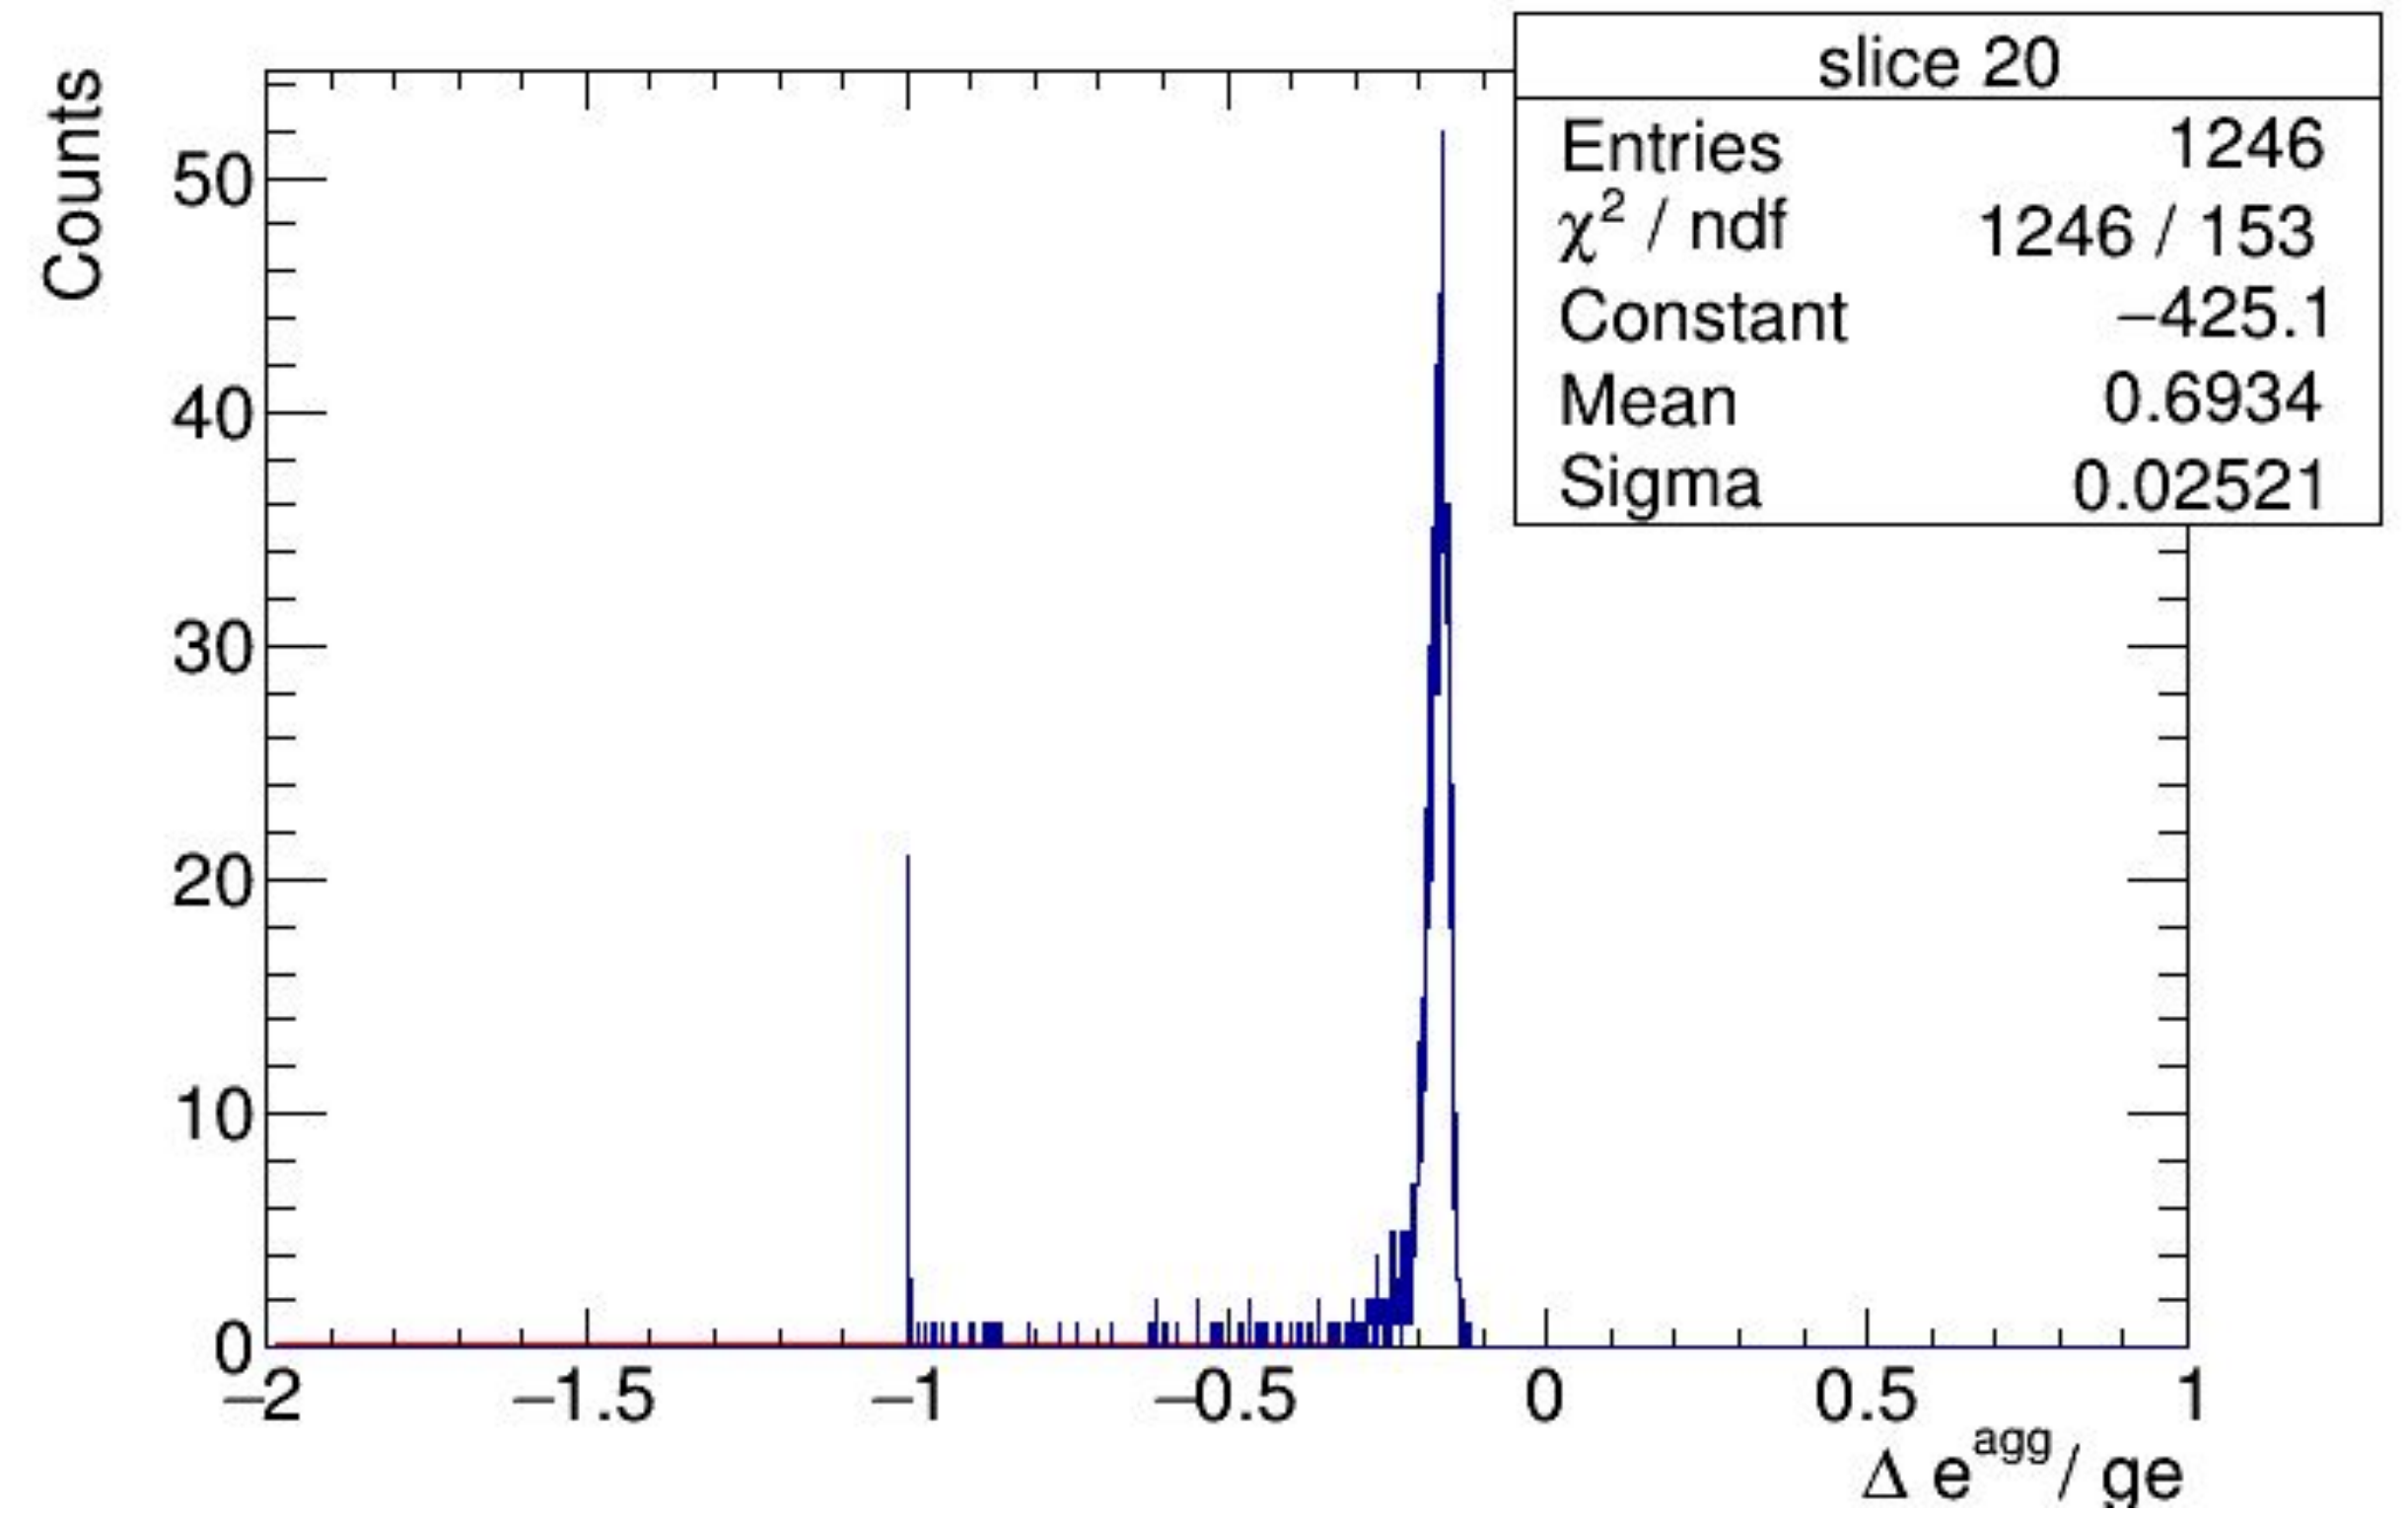

Mean of the Gaussians fitted to the slices of the  $(ce-ge)/ge$  vs  $ge$  plot.

reduced\_ $\chi^2$  of the Gaussians fitted to the slices of the  $(ce-ge)/ge$  vs  $ge$  plot.

# FEMC ( $e^-$ )

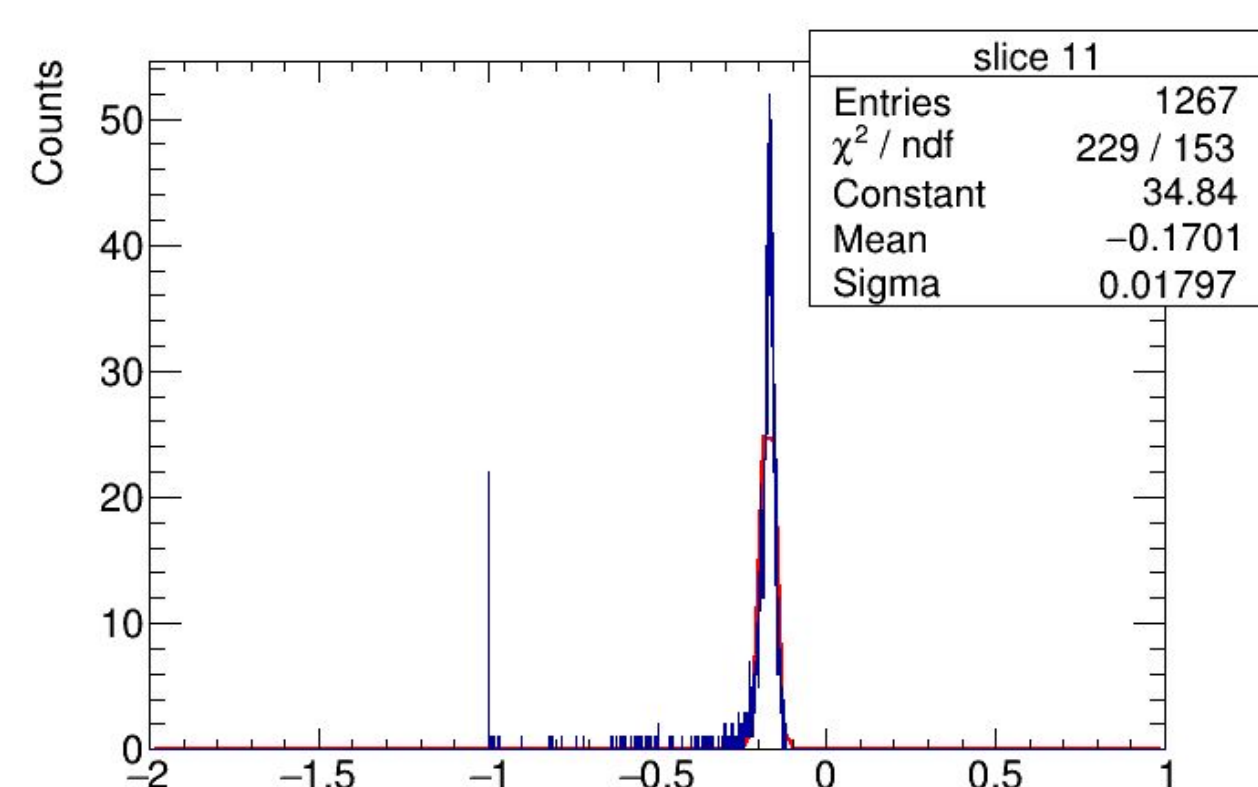

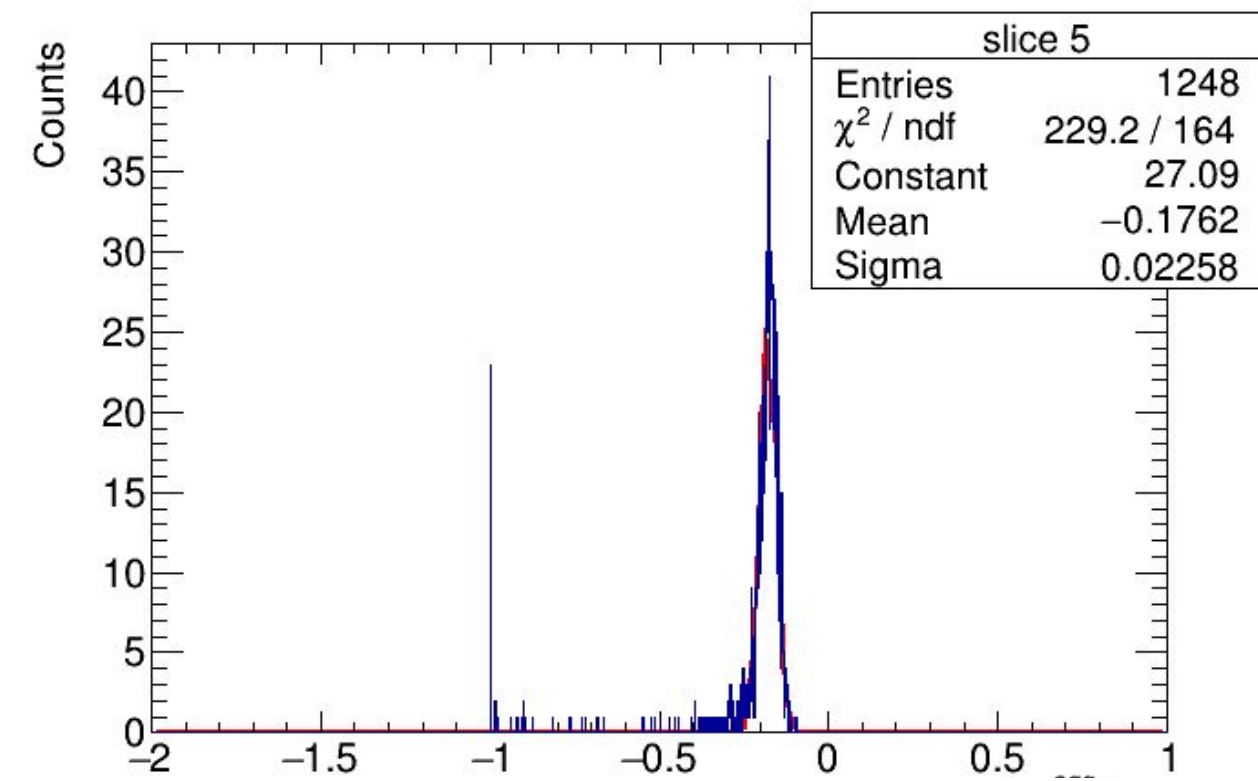

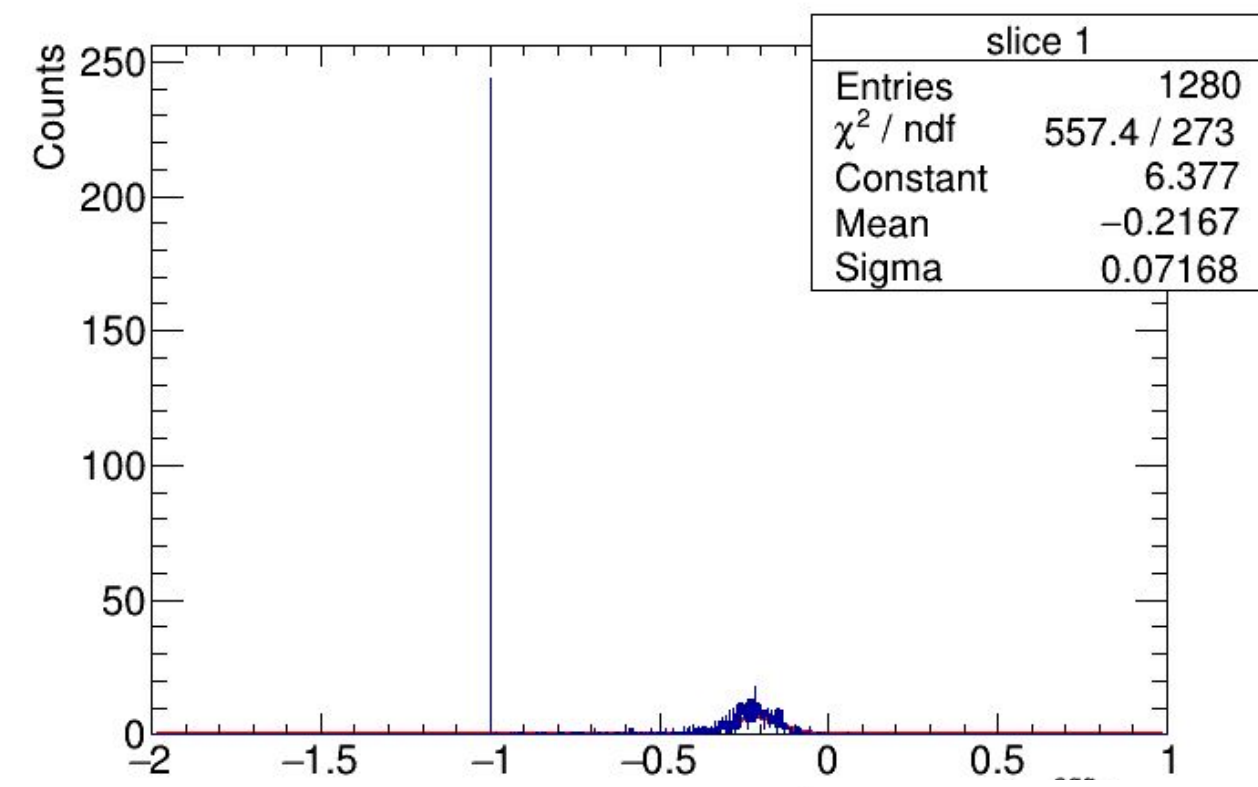

Some of the fitted Gaussians

Number of bins = 2000 from -2 to +1

# FEMC (e<sup>-</sup>)

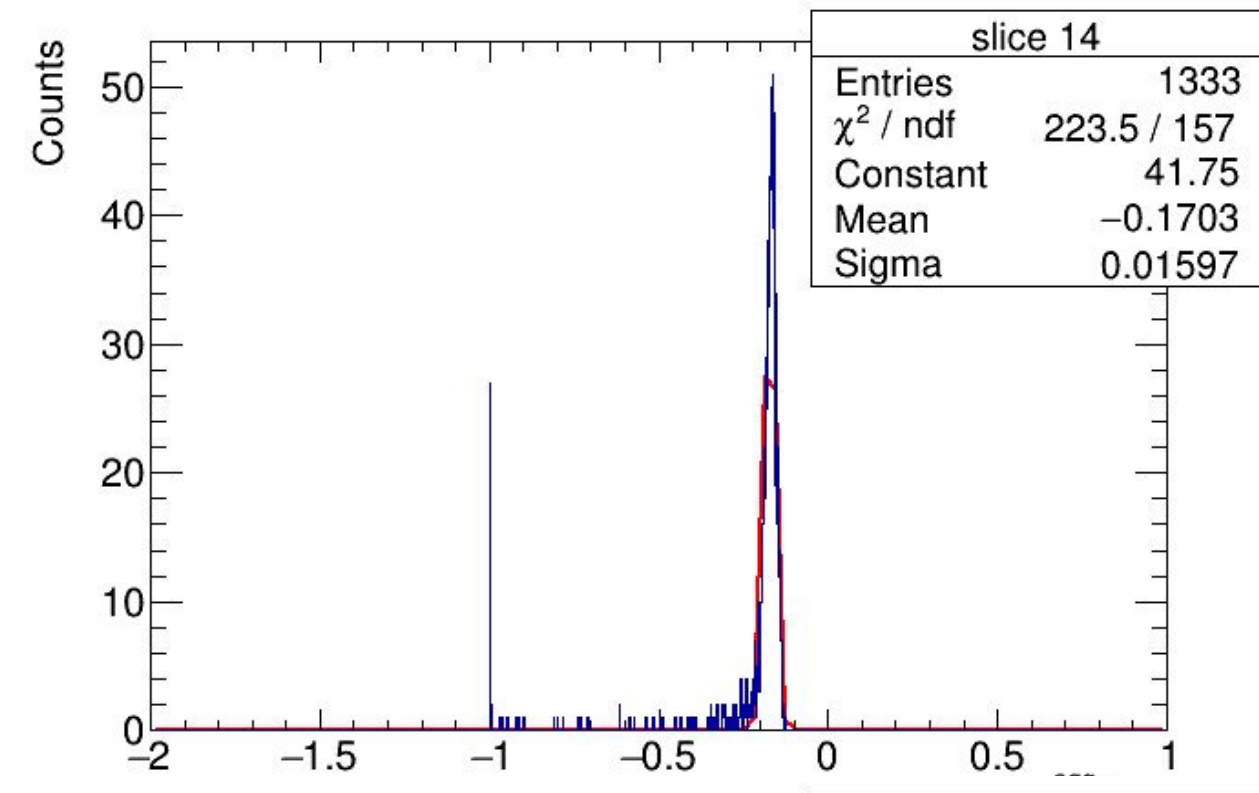

## Fitted Gaussians

The x-axes denote  $\Delta e_{\text{agg}}/ge$

# FEMC (e<sup>-</sup>)

## Fitted Gaussians

The x-axes denote  $\Delta e_{\text{agg}}/ge$

A teal geometric graphic consisting of several overlapping triangles and quadrilaterals, creating a faceted, crystalline appearance. It is positioned on the left side of the slide.

**FEMC ( $\pi^-$ )**

energy cut:  $ce > 0.2$  GeV

# FEMC ( $\pi^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3

no energy cut

# FEMC ( $\pi^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3

no energy cut

A teal geometric graphic consisting of several overlapping triangles and quadrilaterals, creating a faceted, crystalline appearance. It is located on the left side of the slide.

**FHCAL ( $\pi^-$ )**

energy cut:  $ce > 0.2$  GeV

# FHCAL ( $\pi^-$ )

Explicit  $\eta$  cut: 1.2 to 3.5

no energy cut

# FHCAL ( $\pi^-$ )

Explicit  $\eta$  cut: 1.2 to 3.5

no energy cut

**FEMC + FHCAL ( $\pi^-$ )**

# FEMC + FHCAL ( $\pi^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3  
no energy cut

# FEMC + FHCAL ( $\pi^-$ )

(ce-ge)/ge vs ge  
Explicit  $\eta$  cut: 1.3 to 3.3  
no energy cut

# FEMC + FHCAL ( $\pi^-$ )

(ce-ge)/ge vs ge  
Explicit  $\eta$  cut: 1.3 to 3.3

$\sigma_e$  refers to the standard deviation of the Gaussian fitted to a slice of the (ce-ge)/ge vs ge plot. (shown on the previous slide)

Number of bins = 15  
Bin Width = 2 GeV

Fit Parameters:

$p_0 = (0.0972296 \pm 0.00668992)$   
 $p_1 = (0.211140 \pm 0.0222952) \text{ GeV}^{0.5}$

# FEMC + FHCAL ( $\pi^-$ )

Explicit  $\eta$  cut: 1.3 to 3.3

Mean of the Gaussians fitted to the slices of the  $(ce-ge)/ge$  vs  $ge$  plot.

reduced\_chi2 of the Gaussians fitted to the slices of the  $(ce-ge)/ge$  vs  $ge$  plot.

# FEMC + FHCAL ( $\pi^-$ )

Some of the fitted Gaussians

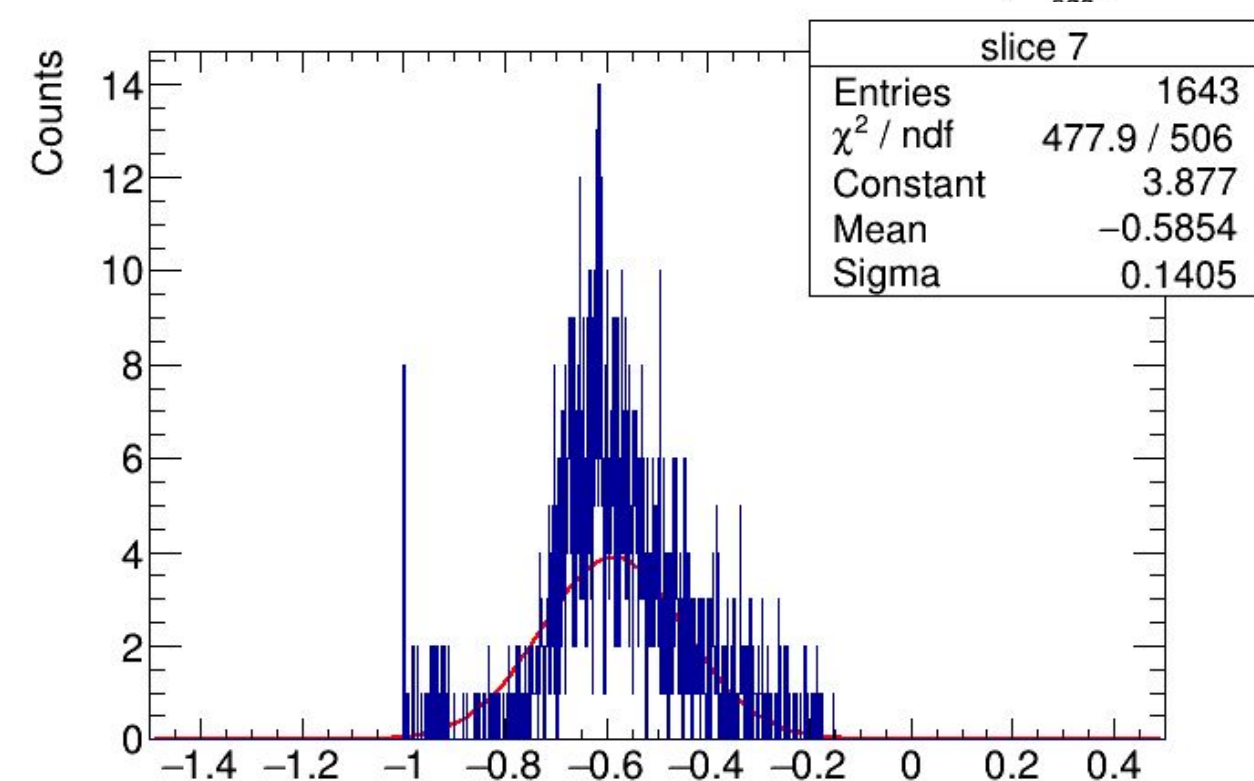

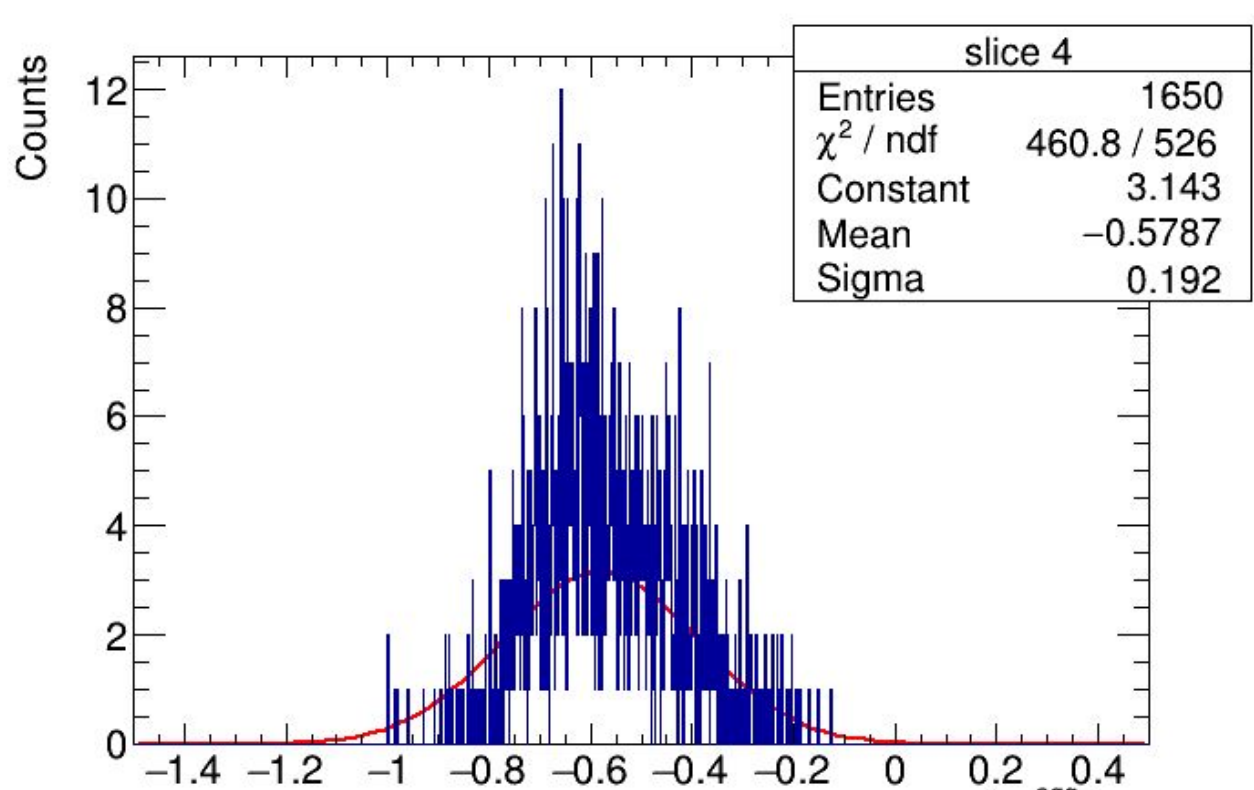

Number of bins = 2000 from -1.5 to +0.5

# FEMC + FHCAL ( $\pi^-$ )

## Fitted Gaussians

The x-axes denote  $\Delta e_{\text{agg}}/ge$

# FEMC + FHCAL ( $\pi^-$ )

## Fitted Gaussians

The x-axes denote  $\Delta e_{\text{agg}}/g_e$
