Panjab University, Chandigarh, INDIA

Fun4All QA Biweekly Meeting
July 21, 2021

Details:

- Particle: e-
- Statistics: 100000 (0-30 GeV) + 50000 (0-10 GeV)
- geta range: -4 to 4
- gphi range: $-\pi$ to π
- Cuts employed:
 - Detector-wise geta cuts
 - CEMC: $\eta = -1.5$ to 1.2
 - FEMC: $\eta = 1.3$ to 3.3
 - EEMC: $\eta = -3.5$ to -1.7
 - Circular cuts on dphi and dtheta: for manual clustering
 - **Two types of energy cut on towers:**
 - **Aggregated tower energy cut: 100 MeV**
 - **Individual tower energy cut: 100 MeV**
- Photon digitization: turned off
- All sampling fractions updated

Electron

(CEMC, FEMC, EEMC)

Calibration procedure:

1. Obtain Tprofile plots for the calorimeters' te/ge vs ge plots.
2. Get a good fit function for that calorimeter.
3. Use this fit function to recalibrate the tower energy of the respective calorimeter ($te/calibration\ factor$).

Comparison of all different types of cuts used and their effect on energy plot

Example: EEMC

Without any cut (raw data)

Circular cut on dtheta and dphi

100 MeV cut on aggregated tower energy for each event + Circular cut

100MeV cut on each tower for an event + 100 MeV cut on aggregated tower energy for each event + Circular cut

Comparison of aggregate tower energy cuts

Example: EEMC

Agg tower energy cut > 0

Agg tower energy cut > 50MeV

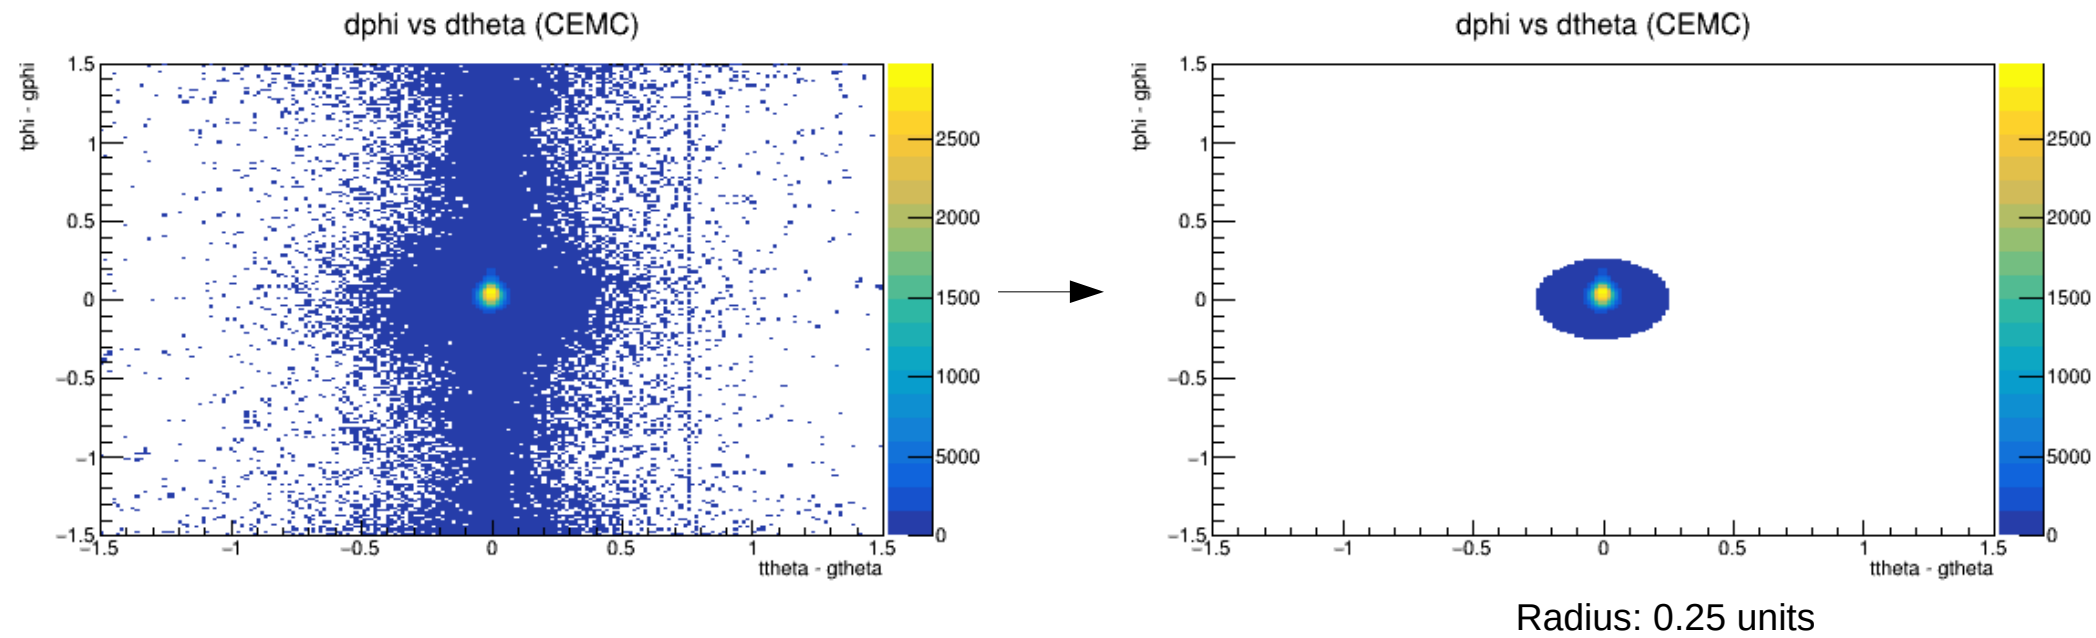

Agg tower energy cut > 100MeV

For this study, 100MeV energy cut is used on the aggregated tower energy for each event

CEMC

Manual Clustering: Circular cut on dtheta and dphi:

**100 MeV Energy cut on
aggregated tower energy
for each event**

Before recalibration: CEMC

$\eta = -1.5$ to 1.2

P0=0.0205302; p1=0.10534; p2=0.02

(pol0 fit)

p0 = 0.991468

Recalibration using pol0 fit:

P0=0.0205302; p1=0.10534; p2=0.02

CEMC Gaussian fits (after calibration):

8

CEMC gaussian fits (after calibration):

**100 MeV Energy cut on the
individual towers for each
event**

+

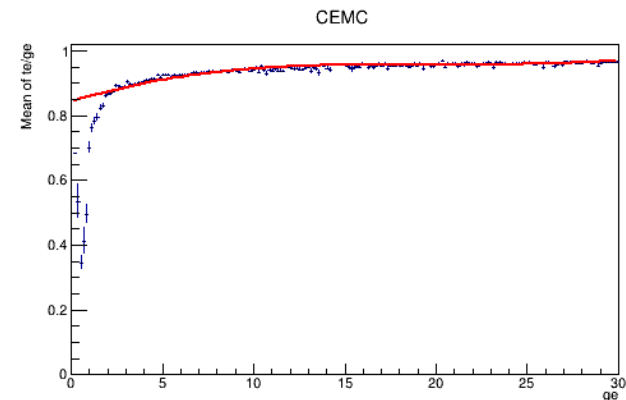

100 MeV energy cut on the aggregated tower energy for each
event

Before recalibration: CEMC

$\eta = -1.5$ to 1.2

$p_0=0.0164032$; $p_1=0.114193$; $p_2=0.02$

(pol3 fit)

Recalibration using pol3 fit:

$p_0=0.0142342$; $p_1=0.128812$; $p_2=0.02$

(pol3 fit)

CEMC Gaussian fits (after calibration):

8

CEMC gaussian fits (after calibration):

FEMC

Manual Clustering: Circular cut on dtheta and dphi:

**100 MeV Energy cut on
aggregated tower energy
for each event**

Before recalibration: FEMC

$\eta = 1.3$ to 3.3

$p_0=0.00850391$; $p_1=0.049664$; $p_2=-0.00370873$

(pol0 fit)

$p_0 = 0.830733$

Recalibration using pol0 fit:

$p_0=0.0115892$; $p_1=0.0484642$; $p_2=0.0108484$

FEMC Gaussian fits (after calibration):

8

FEMC gaussian fits (after calibration):

**100 MeV Energy cut on the
individual towers for each
event**

+

100 MeV energy cut on the aggregated tower energy for each
event

Before recalibration: FEMC

$\eta = 1.3$ to 3.3

$p_0=0.014103$; $p_1=0.00499252$; $p_2=0.0790424$

(pol3 fit)

Recalibration using pol0 fit:

$p_0=0.0051807$; $p_1=0.0770019$; $p_2=0.00836012$

(pol3 fit)

FEMC Gaussian fits (after calibration):

8

FEMC gaussian fits (after calibration):

EEMC

Manual Clustering: Circular cut on dtheta and dphi:

**100 MeV Energy cut on
aggregated tower energy
for each event**

Before recalibration: EEMC

$\eta = -3.5$ to -1.7

$p0=0.00586027$; $p1=0.00355051$; $p2=-0.000994373$

(pol0 fit)

$p0 = 0.939041$

Recalibration using pol0 fit : Crystal ball fitting for slices

$p0=0.00493094$; $p1=-0.00162239$; $p2=0.00117333$

EEMC Crystal ball fits (after calibration):

EEMC Crystal ball fits (after calibration):

**100 MeV Energy cut on the
individual towers for each
event**

+

100 MeV energy cut on the aggregated tower energy for each
event

Before recalibration: EEMC

$\eta = -3.5$ to -1.7

$p_0=0.00233752$; $p_1=0.0330123$; $p_2=0.0104012$

(pol3 fit)

Recalibration using pol0 fit : Crystal ball fitting for slices

$p_0=0.000224497$; $p_1=0.0293039$; $p_2=0.0311775$

(pol3 fit)

EEMC Crystal ball fits (after calibration):
