

Fun4All Calorimeter Plots: Investigating MIPs in Calorimeters

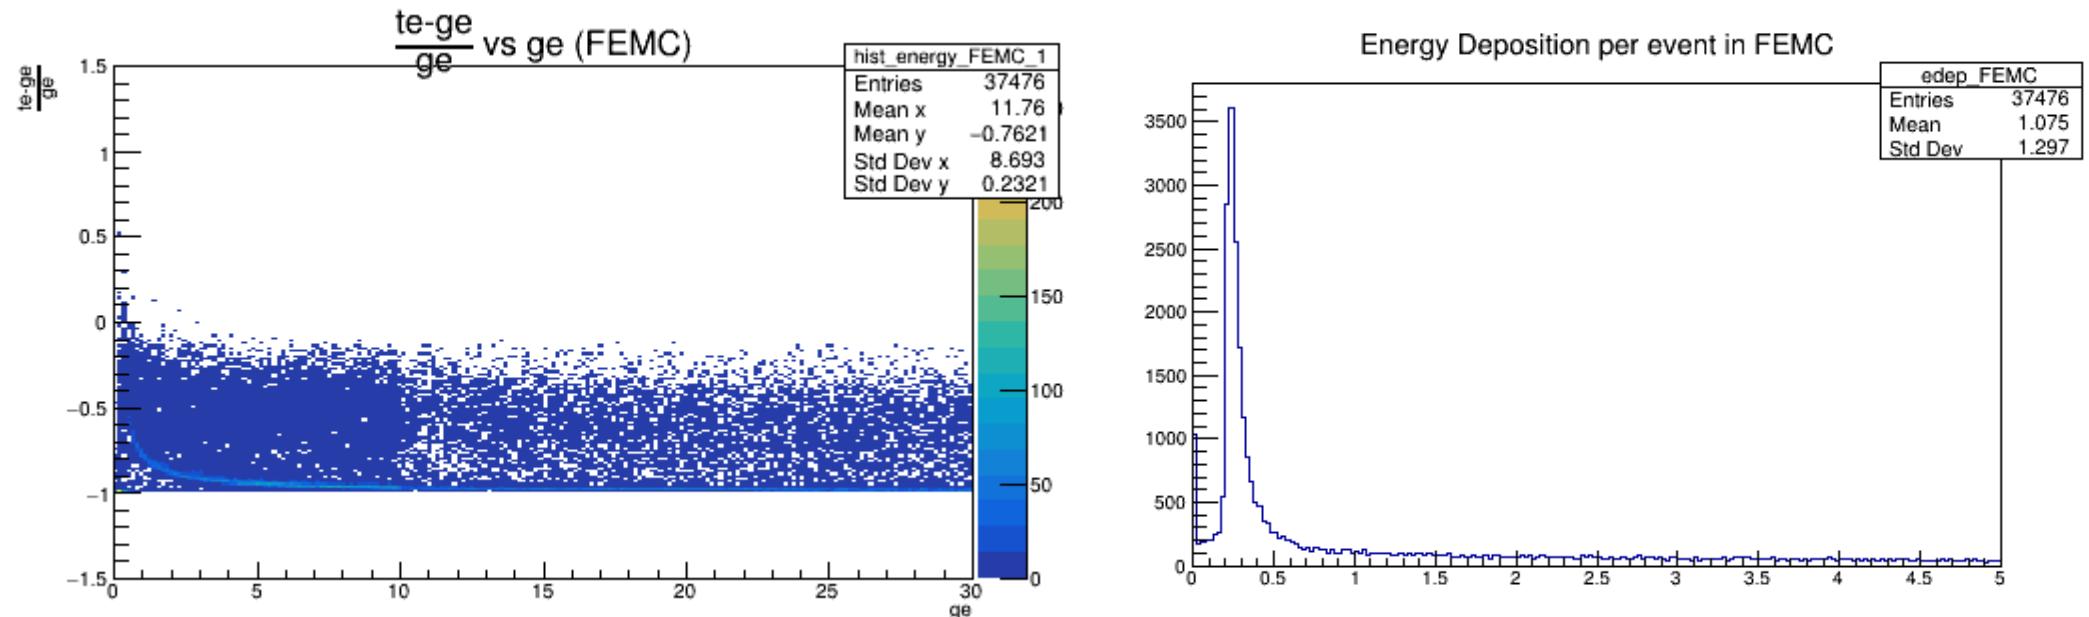

Simran
Lokesh Kumar
Panjab University, Chandigarh, INDIA

Fun4All QA Biweekly Meeting
October 22, 2021

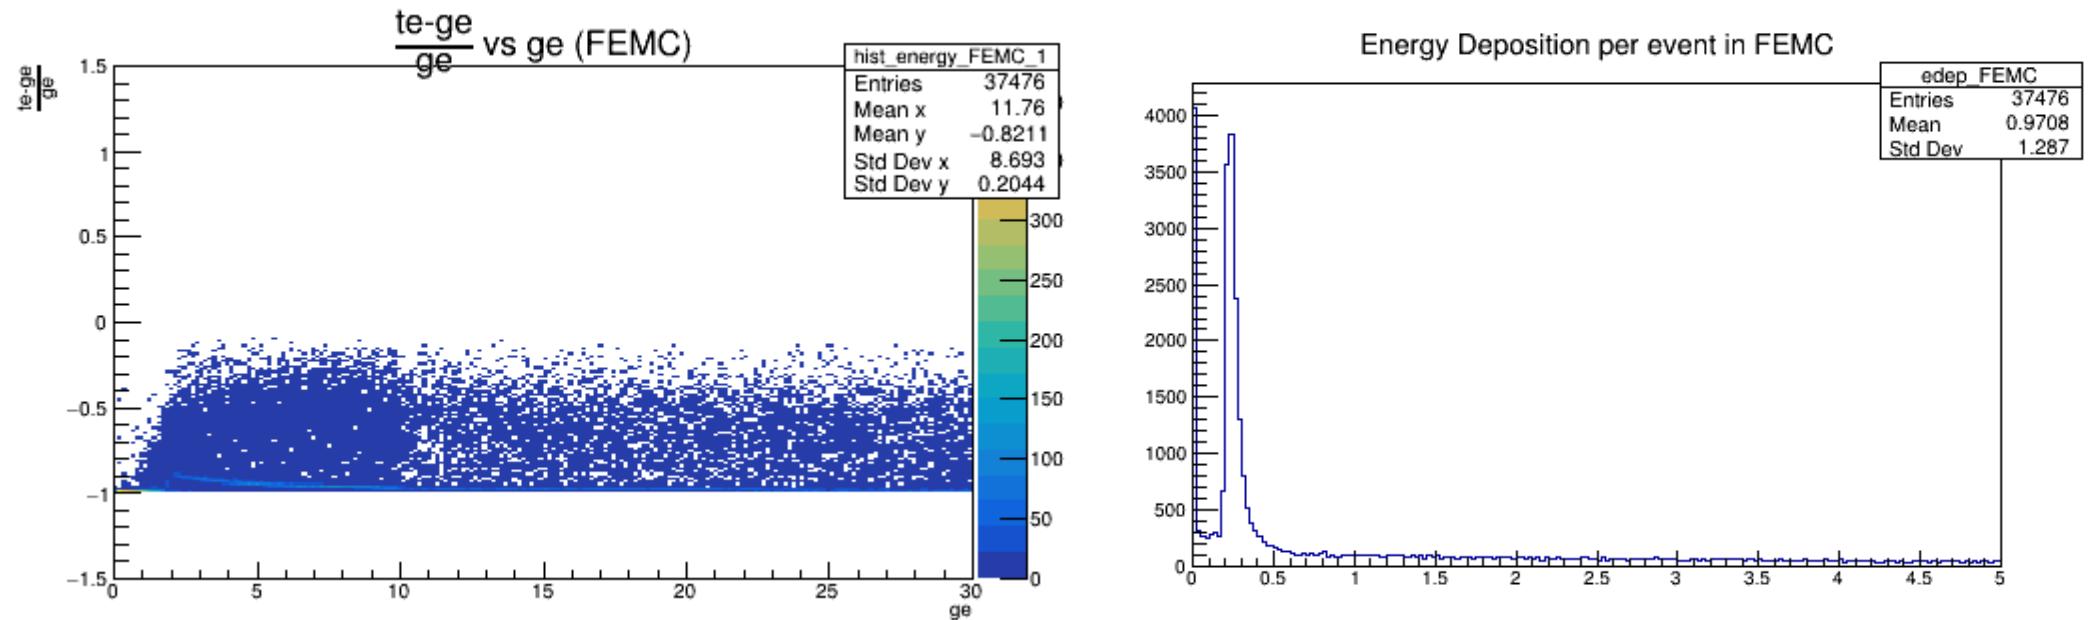

Contents:

- FEMC(pi-) plots: Comparison between cuts
- Muon (μ -) Energy Deposition

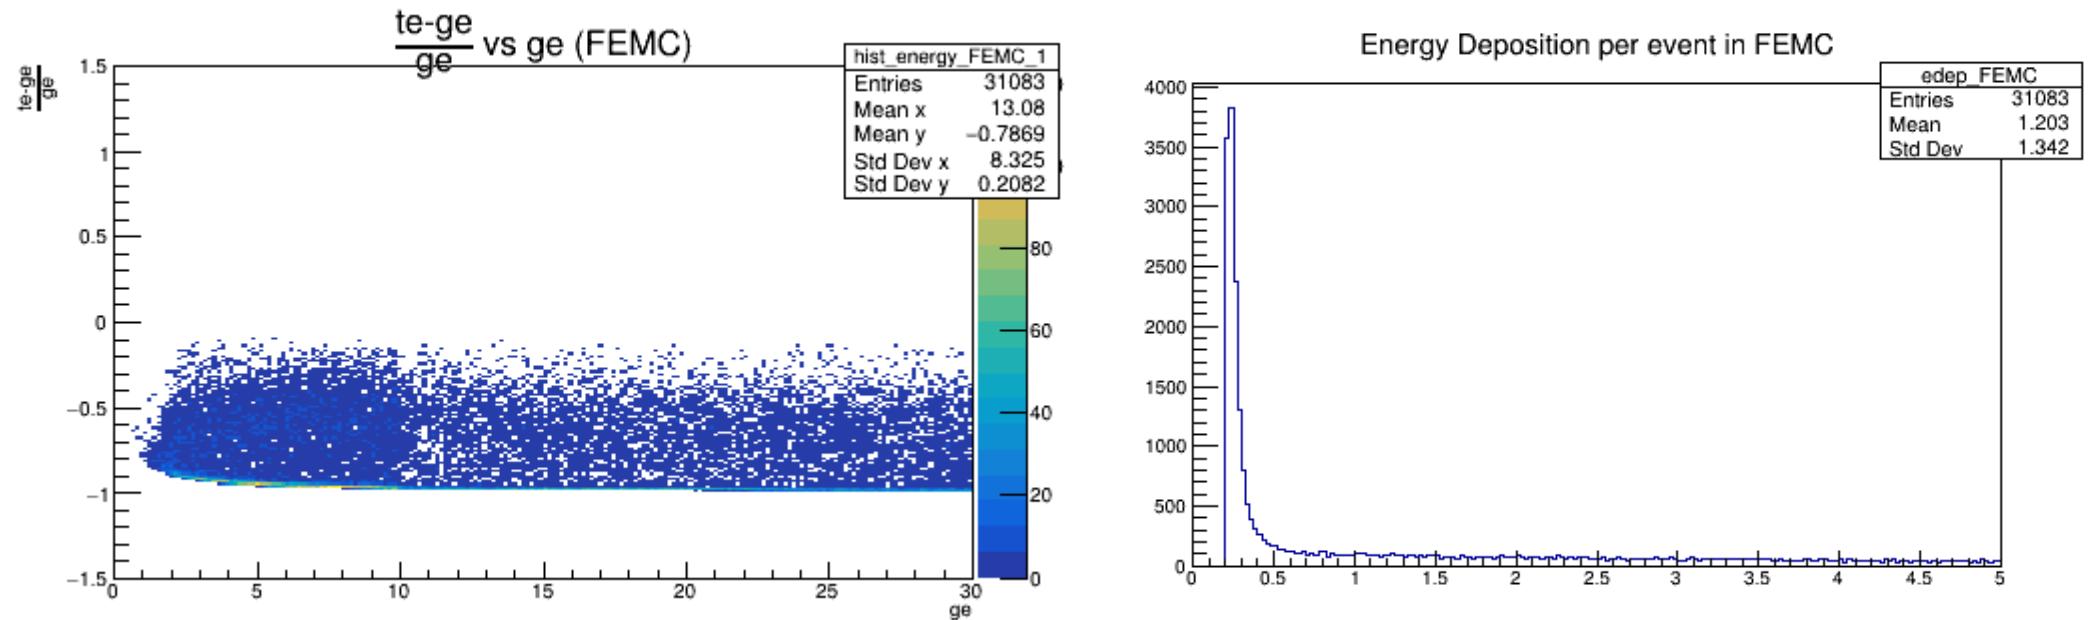

Raw energies: No cut applied

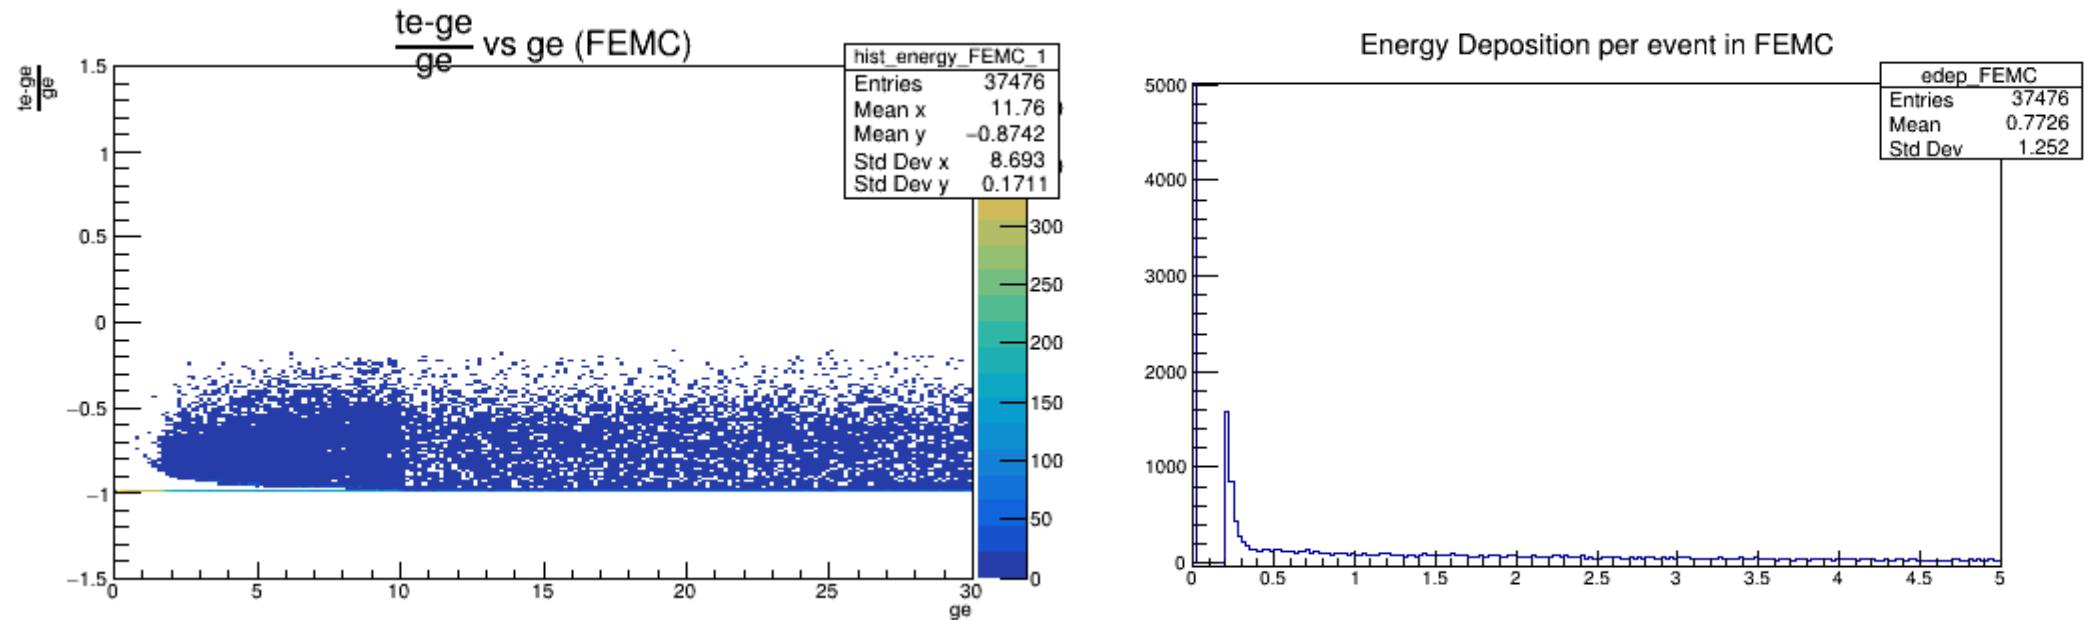

Case 1: Only circular cut applied

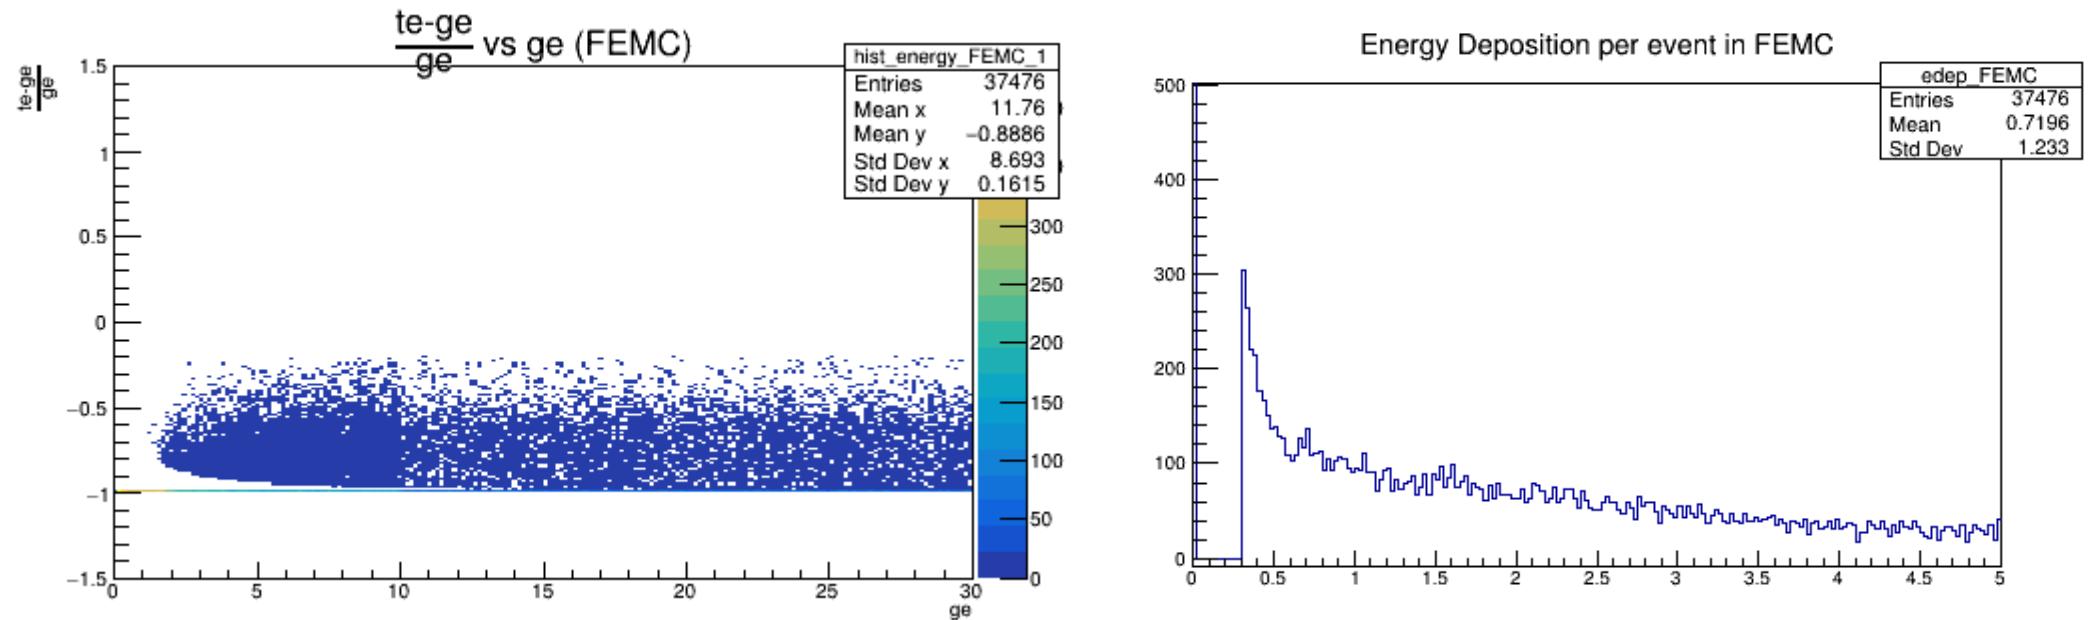

Case 2: Circular cut + aggregate tower cut(200MeV)

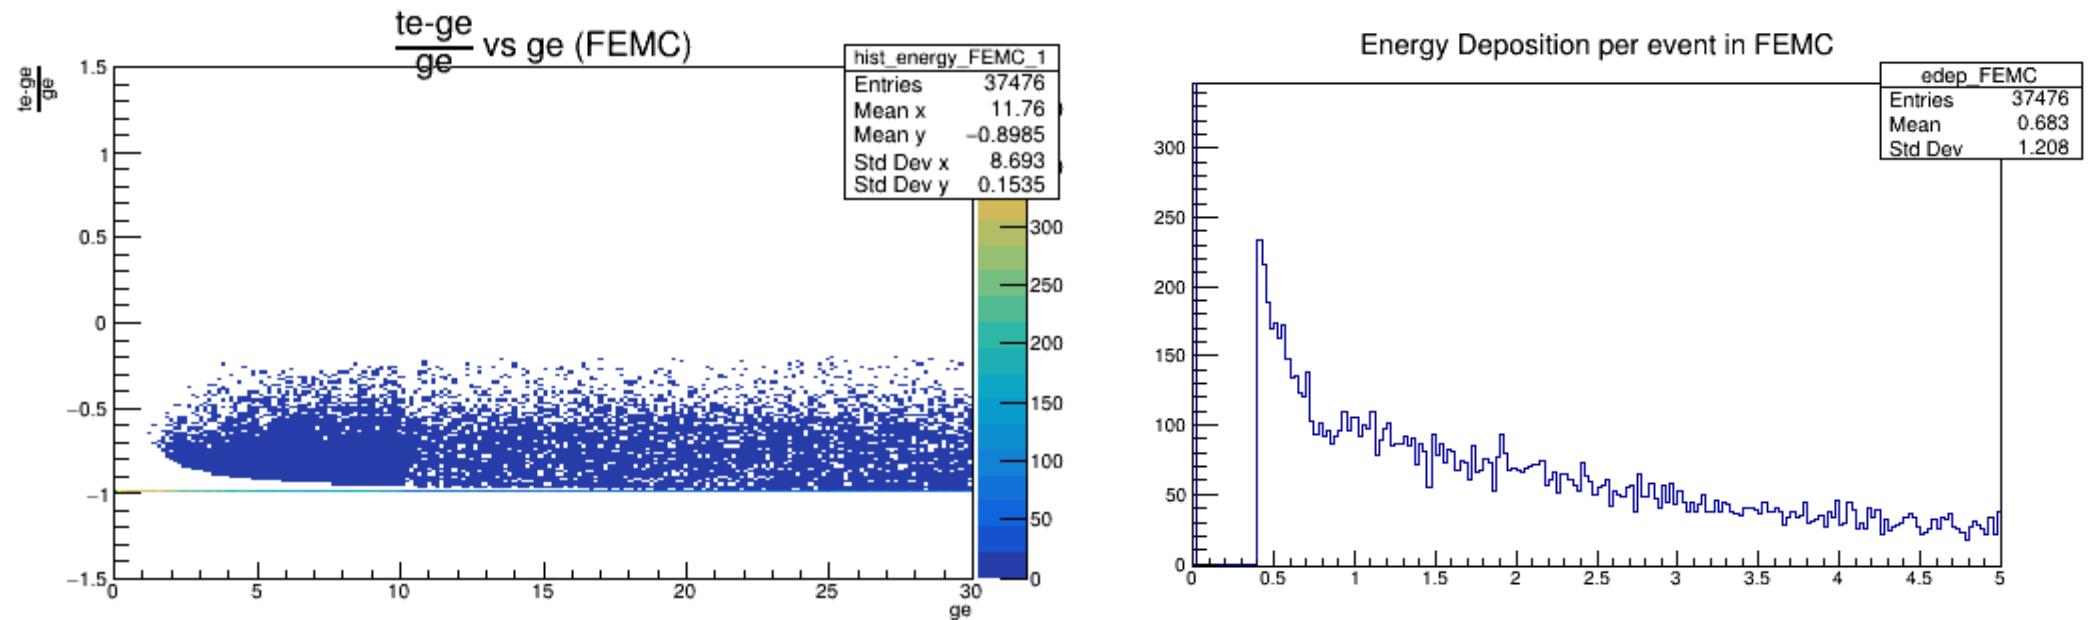

Case 3: Circular cut + individual tower cut (200MeV)

Case 4: Circular cut + individual tower cut (300MeV)

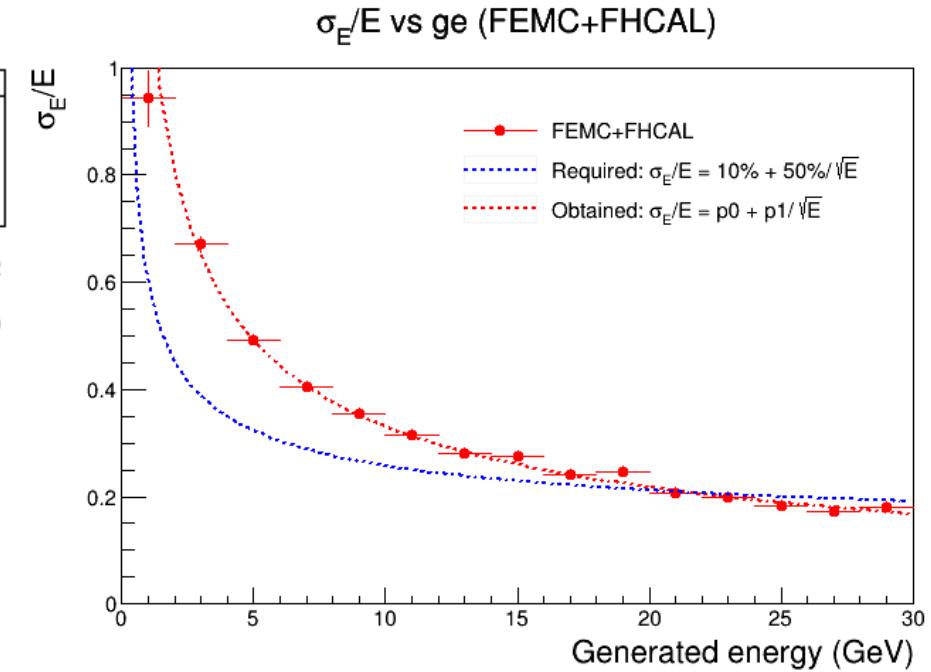

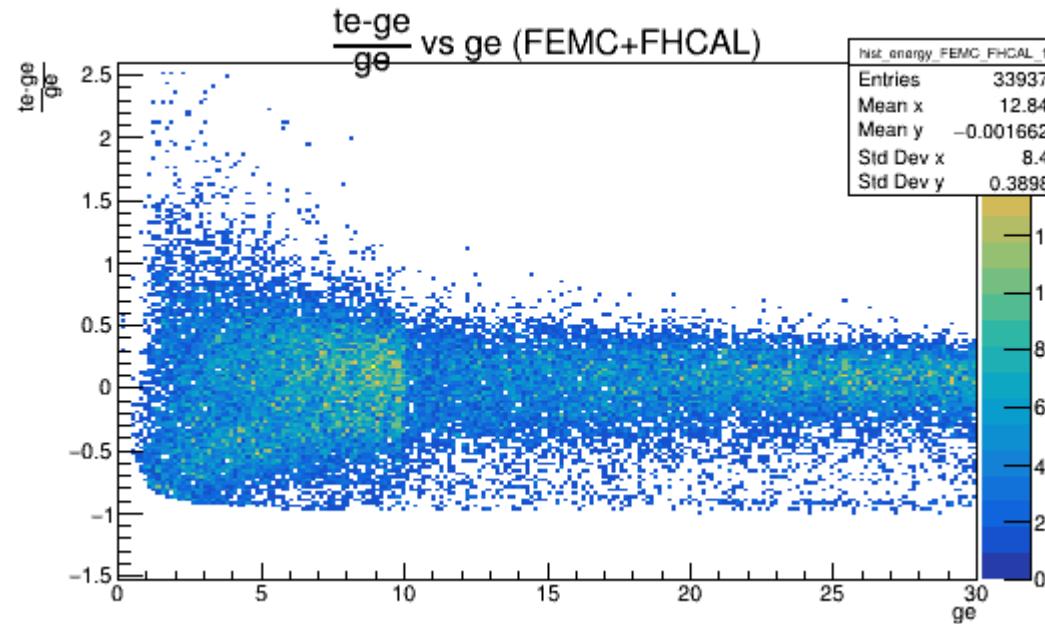

Case 5: Circular cut + individual tower cut (400MeV)

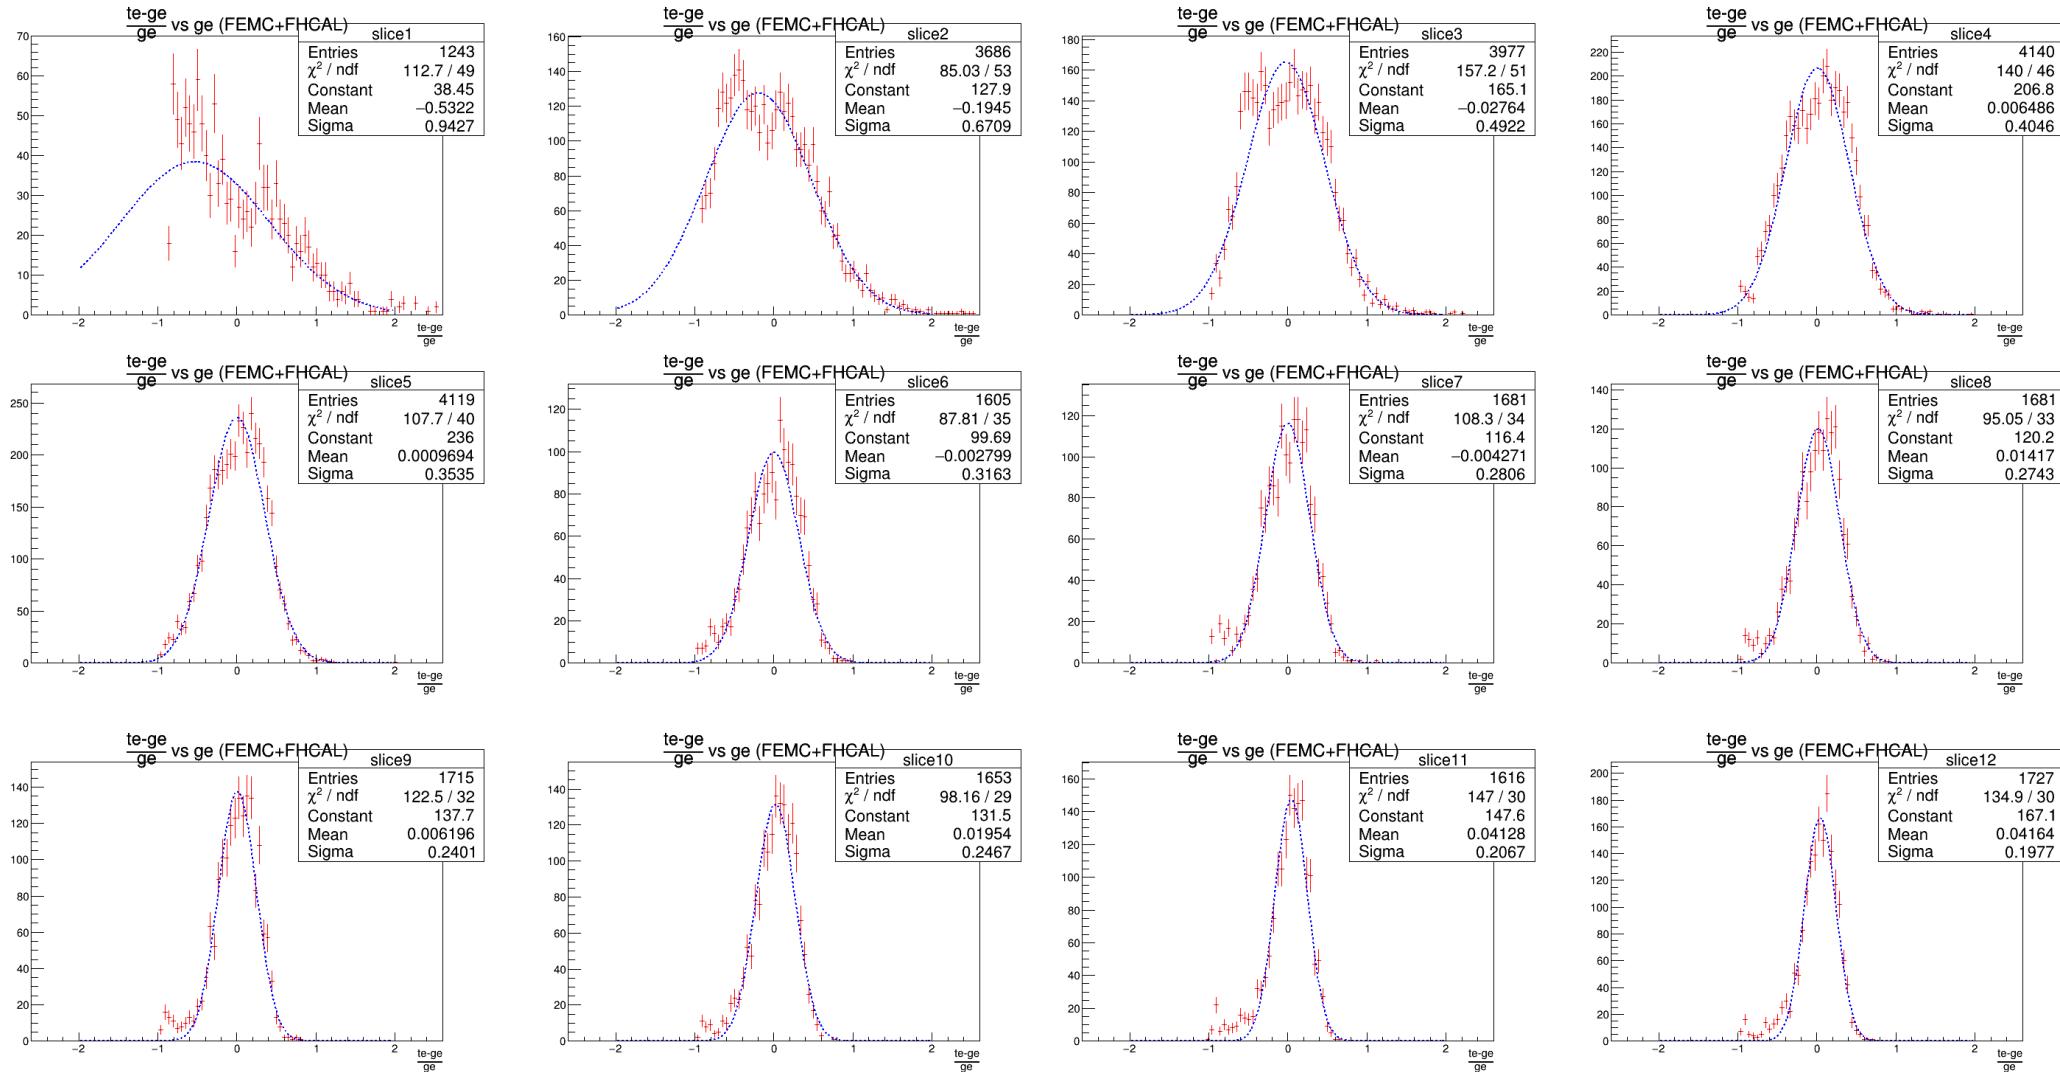

FEMC+FHCAL After Calibration

Using 400MeV individual tower cut & 200MeV aggregate cut

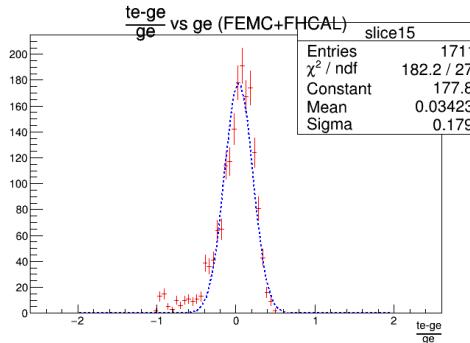

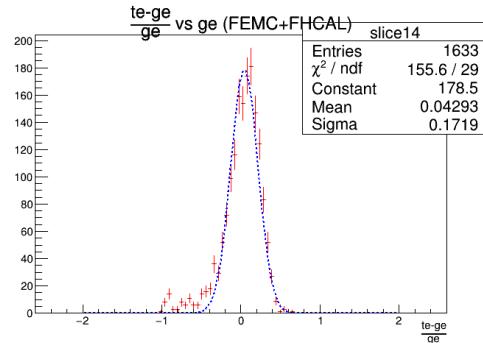

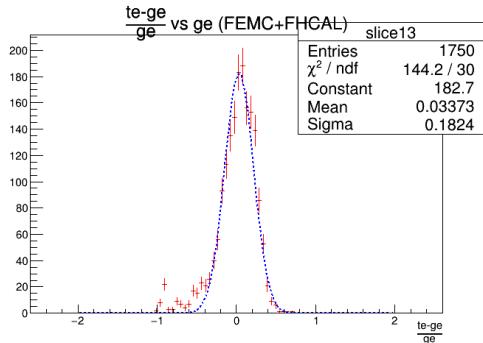

$$\sigma_E/E = -5.6\% + 122.5\%/\sqrt{E}$$

FEMC+FHCAL: Gaussian fits (after calibration):

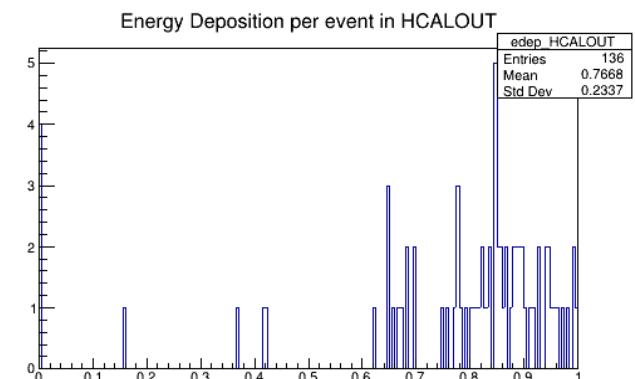

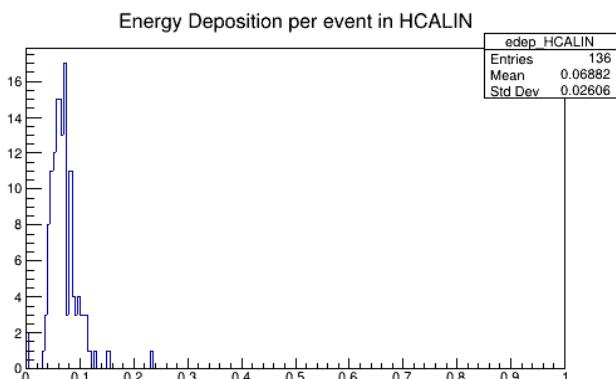

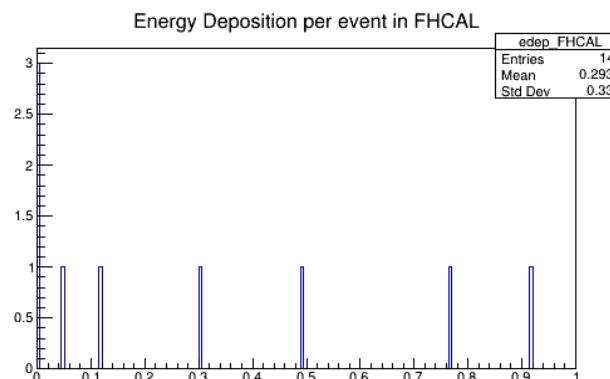

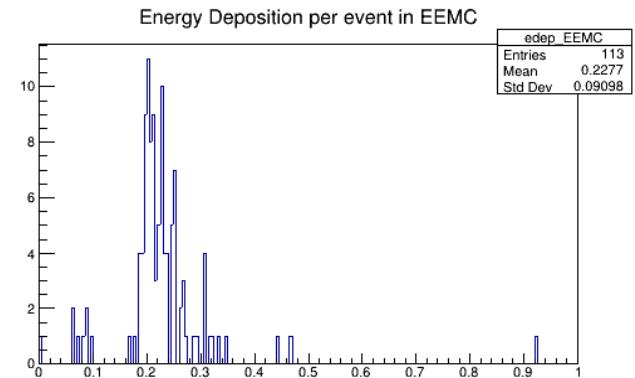

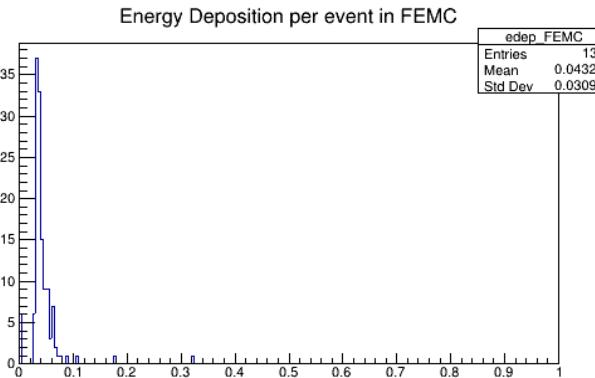

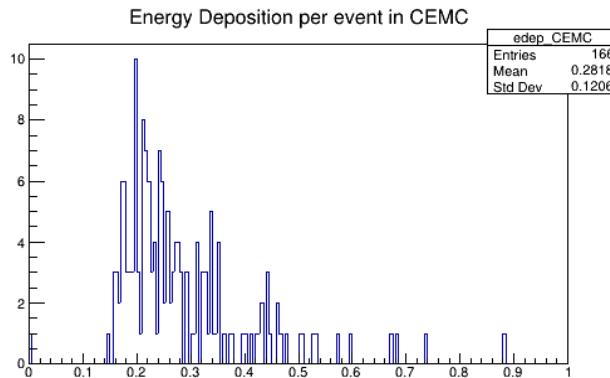

FEMC+FHCAL: gaussian fits (after calibration):

Muon Energy Deposition in calorimeters per event

Events : 1000 ; Generated energies: 0-30 GeV

THE END
