

Monte Carlo generator

Paweł Sznajder
National Centre for Nuclear Research, Poland

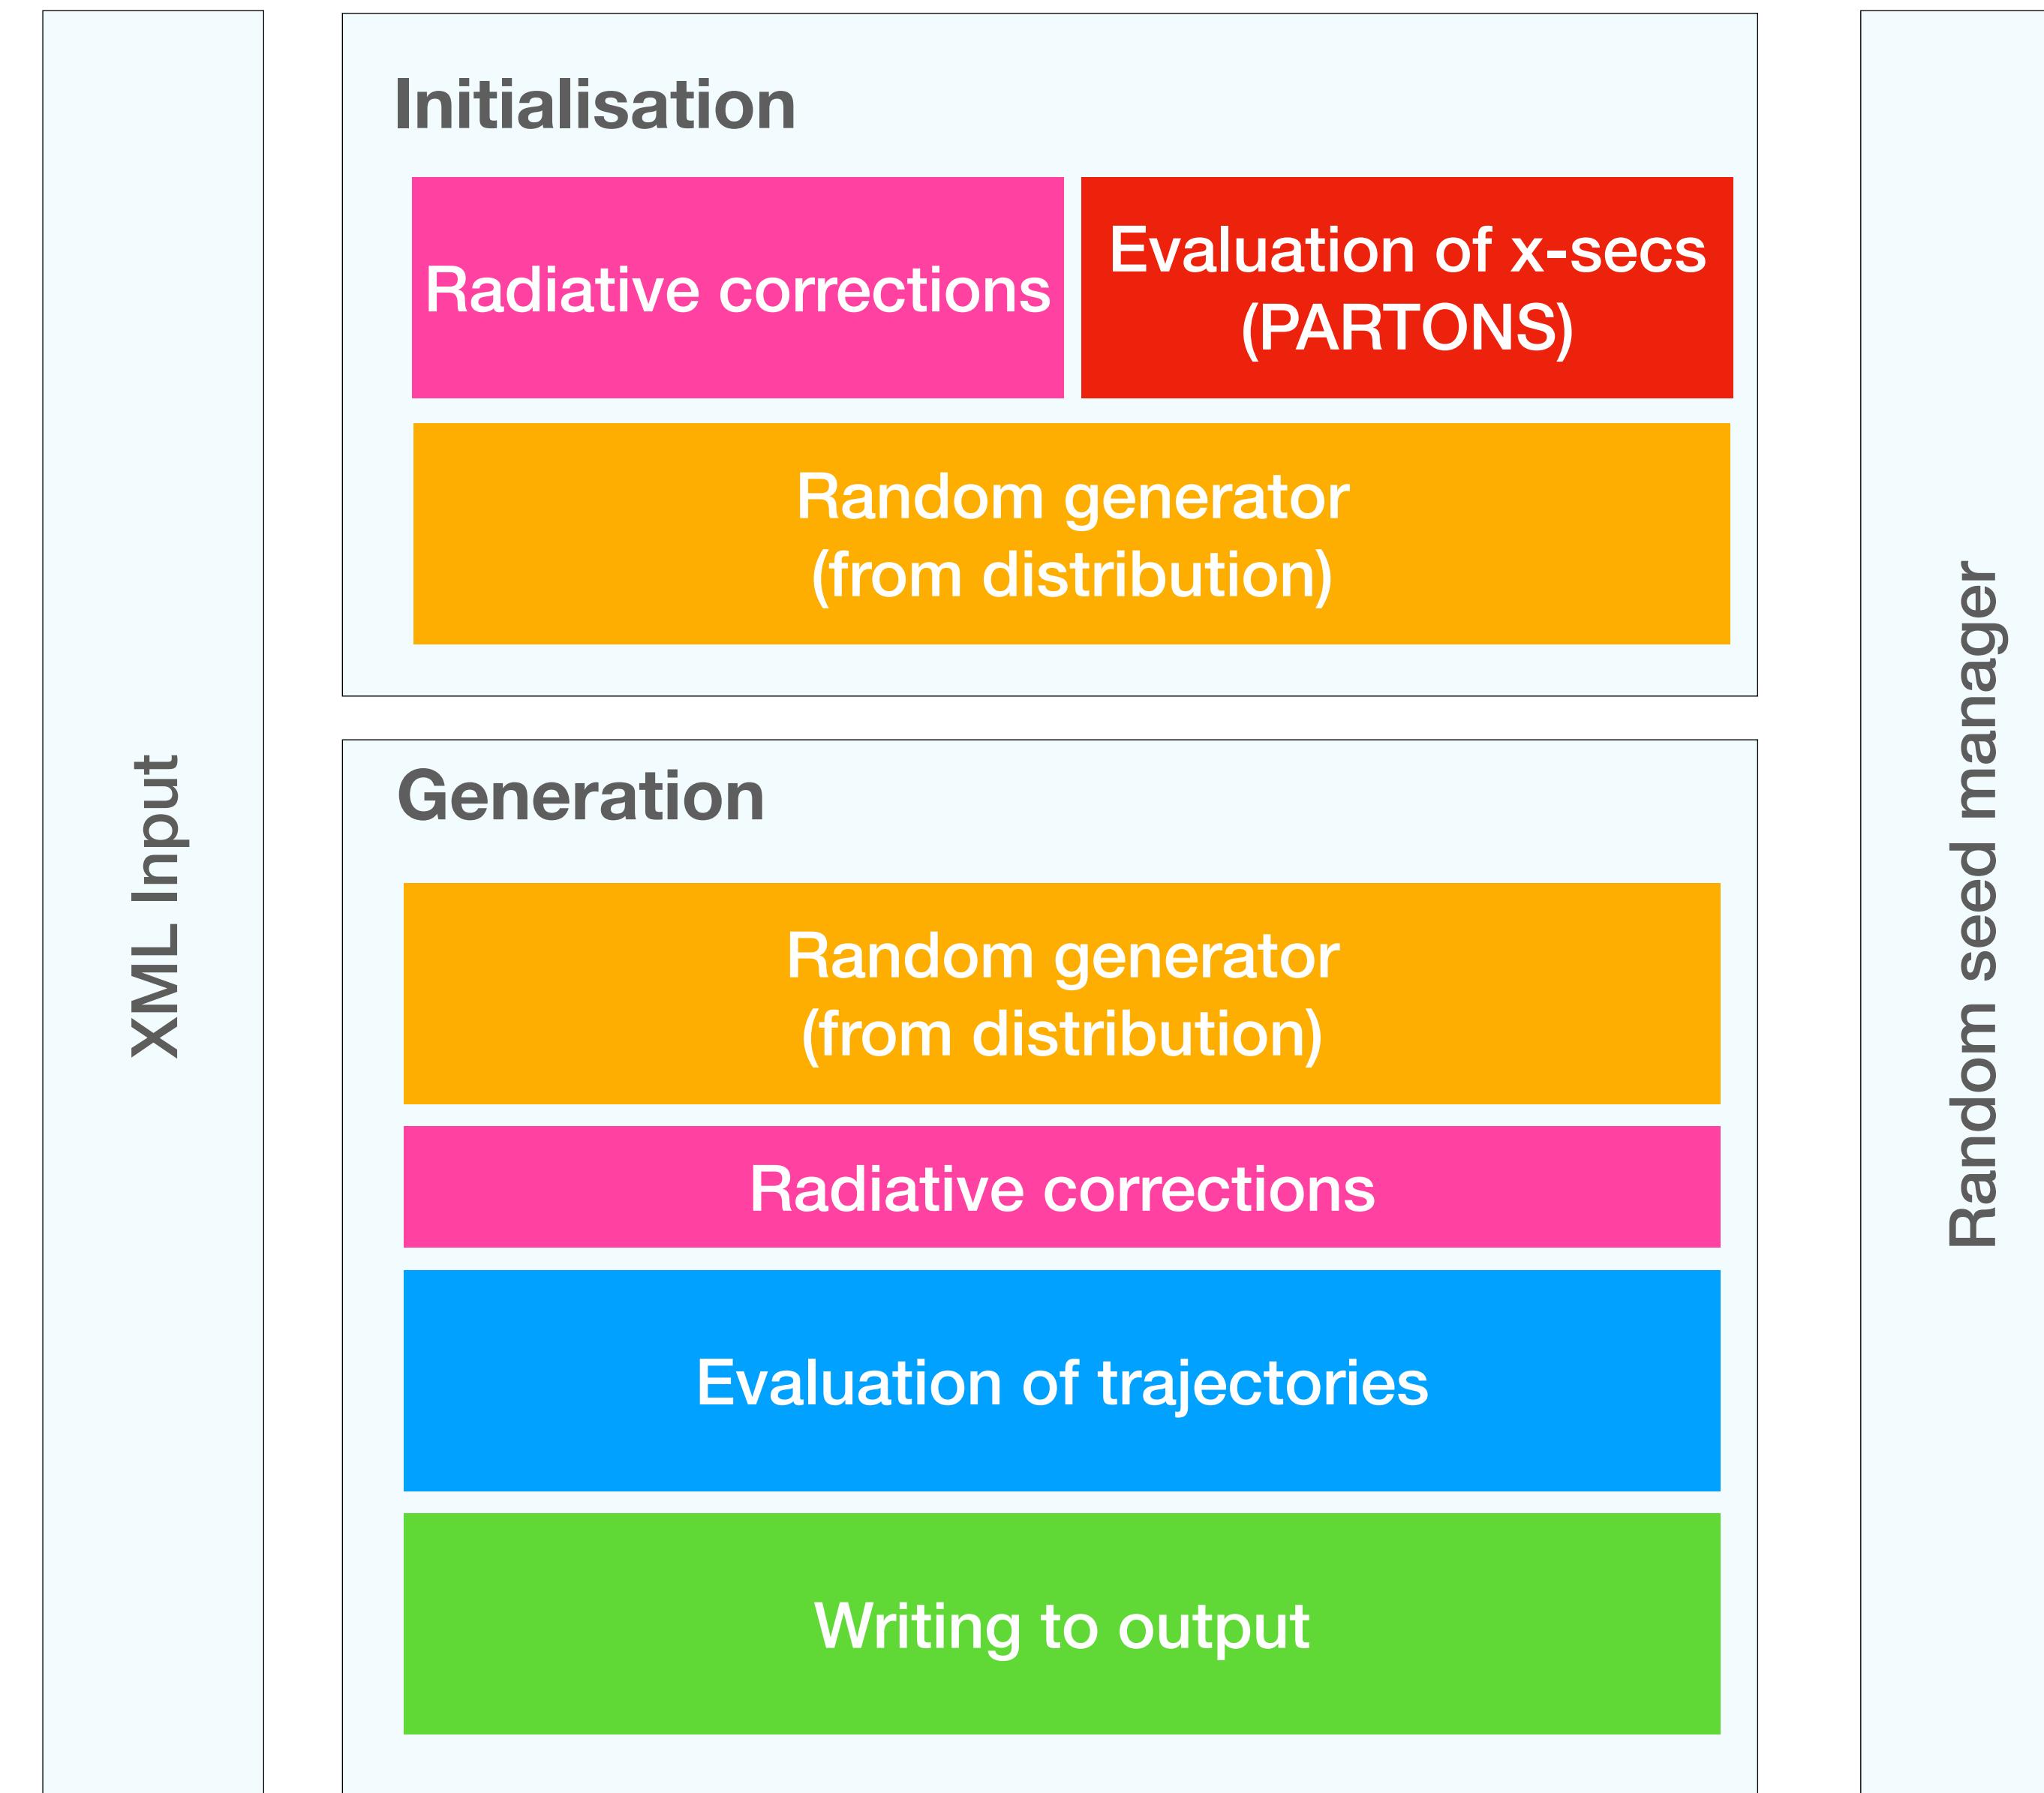

February 22nd, 2021

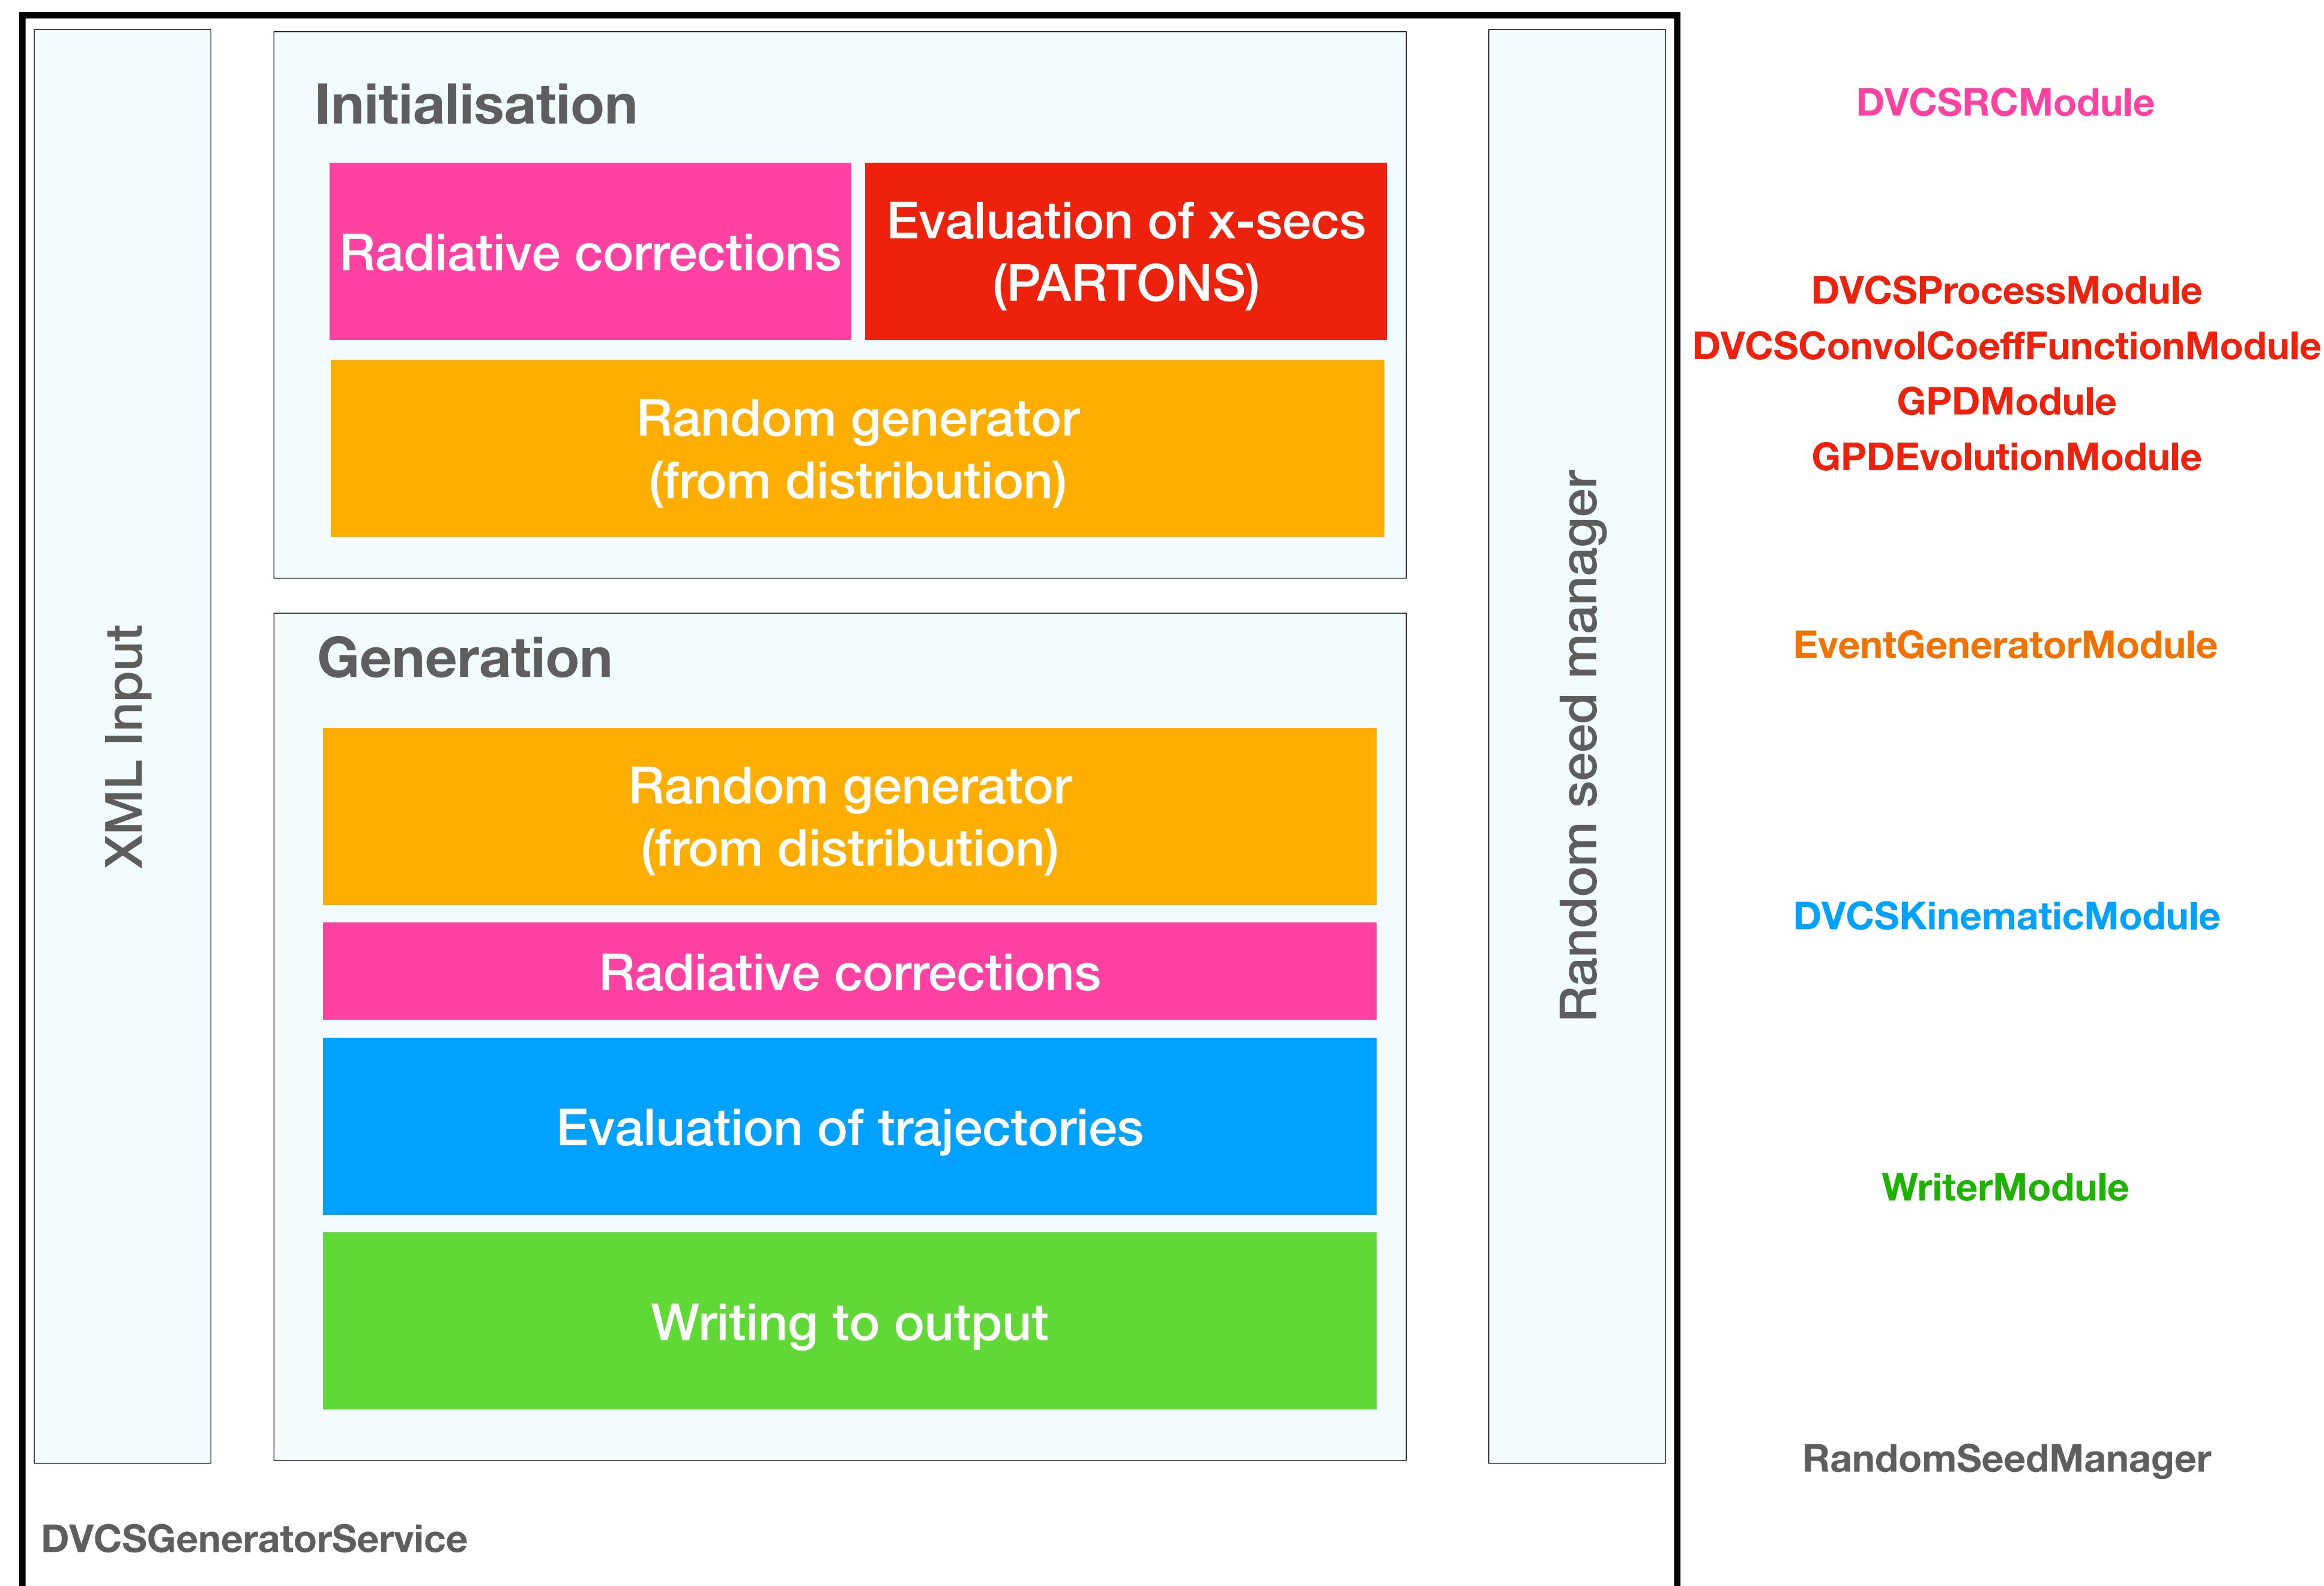

Introduction

- **Generic**
 - to be used at CERN, JLab, EIC, ... (no more “home-made” generators)
- **Multichannel (DVCS, TCS, DVMP, ...)** capability
 - what is available in PARTONS will be available in new MC generator
- **Modularity**
 - for flexibility and simplicity
- **Well developed**
 - good coding practices, use modern programming language (c++) and paradigms
- **Easy to maintain**
 - we expect at least 20 years of lifetime, project must be well designed and properly established, must have useful documentation
- **Robust**
- **Multithreaded**

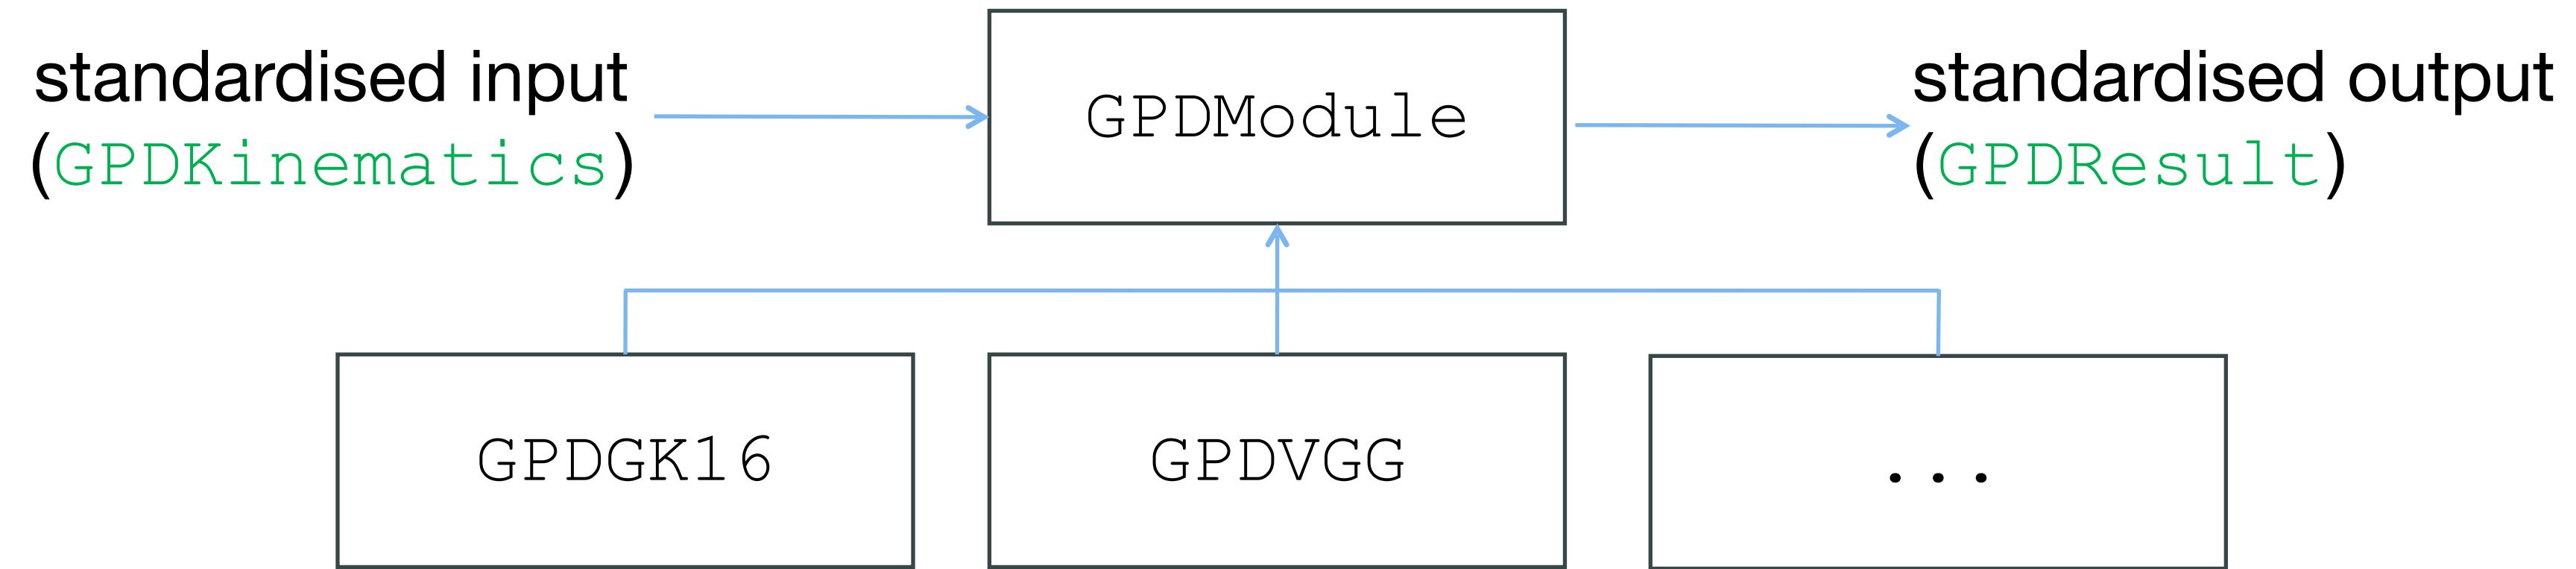

Scheme

Scheme

Module

- benefiting from C++ inheritance and polymorphism mechanisms
- reduction of mistake probability
- part of registry-factory mechanism
- adding new modules as easy as possible

Summary

- Generator name: EpIC (or ePic), needs logo
- Set up at CEA GitLab → we can move it or mirror if necessary
- Written in modern C++
- CI
- First version ready

Outlook

- Testing
- Implementation of RCs
- Modules CFFs from tables
- Problems to solve:
 - multithreading
 - propagation of random seed
- Documentation:
 - technical documentation (Doxygen)
 - examples
 - reference paper
- Dissemination:
 - licence
 - source code via GitLab
 - installation at computing farms
 - containers
