

Dear all,

Here are the minutes of the INTT meeting today.

- **Itaru** find out a way to let Asuka to do the split delivery as soon as they receive the transportation fixtures from Taiwan and BNL. Note **Itaru** needs to know the weight and the size of the package in order to pursue the paper work for the export, which takes two weeks. This paper works can be processed within March though, the delivery date to BNL/Taiwan cannot be arranged before April, due to the end of fiscal year in Japan. In the meantime, BNL and Taiwan should find out class-1 staves from batch-1 by 20-30 psi high pressure test and/or twist test (by 45 degrees) and proceed the assembly work. Please let Itaru know how many class-1 staves are selected in Taiwan and BNL. This counts will be reflected to the number of staves to be fabricated in batch-3.
- **Rachid** tries to get plastic tubes via BNL which may be quicker than purchasing via RBRC. **Rachid** should tell Maureen to stop the order once he gets approval from Ed for this purchase.
- We don't make a new contract to perform the high pressure test for the batch-2 staves, since we cannot wait to establish new contract.
- **Itaru** will go through Asuka's assembly process once again if there is any process which possibly damages the glued joint.
- **Rachid** and **Milan** come up with bias line configuration for 1008 setup in the next meeting, since many of the team members are not catching up the latest config.
- **Itaru** find out the mapping table between the packet number and ROC location/ID. We should better avoid reusing ROC's which is suffered from packet drop off issue during FVTX operation.
- The collaboration decision was made to execute the ROC test in RIKEN. **Rachid** and **Milan** will proceed separate ROC's shipping.
- **Itaru** will try to send 4 HDI's to Taiwan from Batch-2.
- **Itaru** and **Takashi** schedule the regulator optimization in March.

Regards,

-itaru
