

# U.S. ATLAS

## Education and Outreach Event

### Motivation

The ATLAS Experiment is a worldwide effort with over 3000 physicists and engineers - with a strong participation from 45 US universities and national labs (US-ATLAS) - at the CERN international laboratory located in Geneva, Switzerland. The project aims to improve our understanding of the Universe - its birth, evolution, current state, and future. The research offers a wide range of practical applications and educational opportunities. This event will serve as an informal introduction to ATLAS research and discuss US-ATLAS programs that new students and university groups can get involved in.

## June 2, 2021

### Virtual Event

#### Panel Discussion Moderators:

Kathryn Grimm (California State University, East Bay)  
Aleida Perez (Brookhaven National Laboratory)

#### Panelists:

Noel Blackburn (Brookhaven National Laboratory)  
Anna Goussiou (University of Washington, Seattle)  
Mark Kruse (Duke University)  
Chilufya Mwewa (Brookhaven National Laboratory)  
Sahal Yacoob (University of Cape Town)  
Blanca Nino (California State University, Fresno)

#### Organizing Committee:

Kétévi A. Assamagan (Brookhaven National Laboratory)  
Dhiman Chakraborty (Northern Illinois University)  
Kathryn Grimm (California State University, East Bay)  
Anna Goussiou (University of Washington, Seattle)

#### Invited Speakers:

Oliver Keith Baker (Yale University)  
Young-Kee Kim (University of Chicago)  
Peter Onyisi (University of Texas, Austin)  
Sriní Rajagopalan (Brookhaven National Laboratory)  
Reina Camacho Toro (Sorbonne Université, France)  
Mayda Velasco (Northwestern University)
