CMCF Software Architecture

MxLIVE

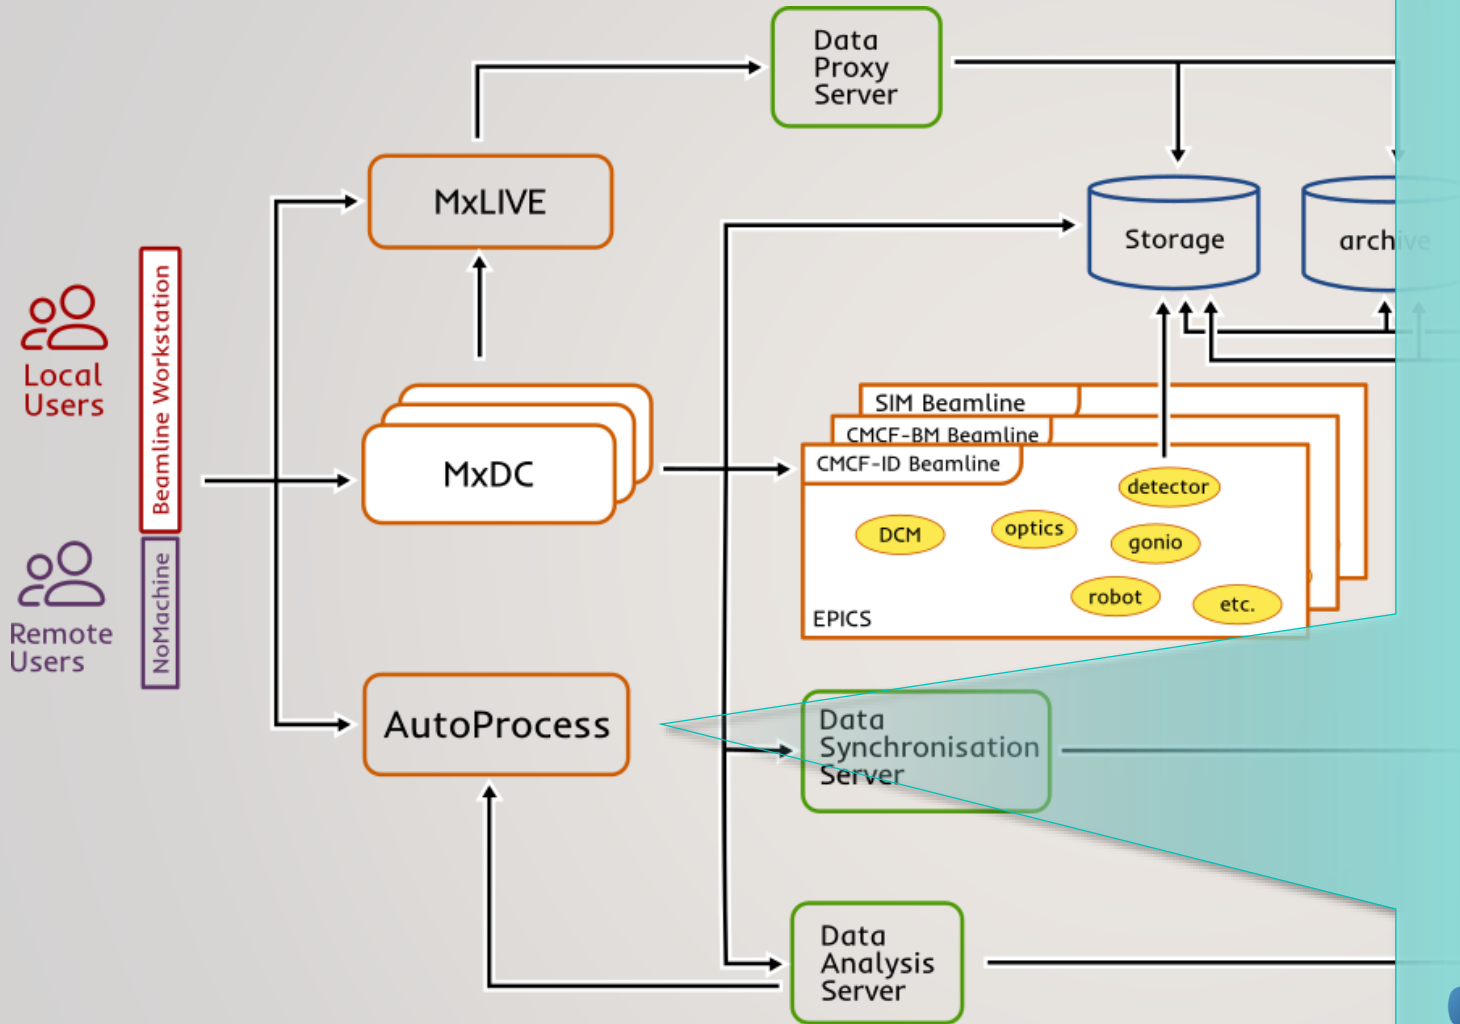

MxLIVE – Mx Lab Information Virtual Environment

- Web-based sample information management
- Meta-data archive
- Secure APIs
- Data access
- Staff Portal
- Since 2011

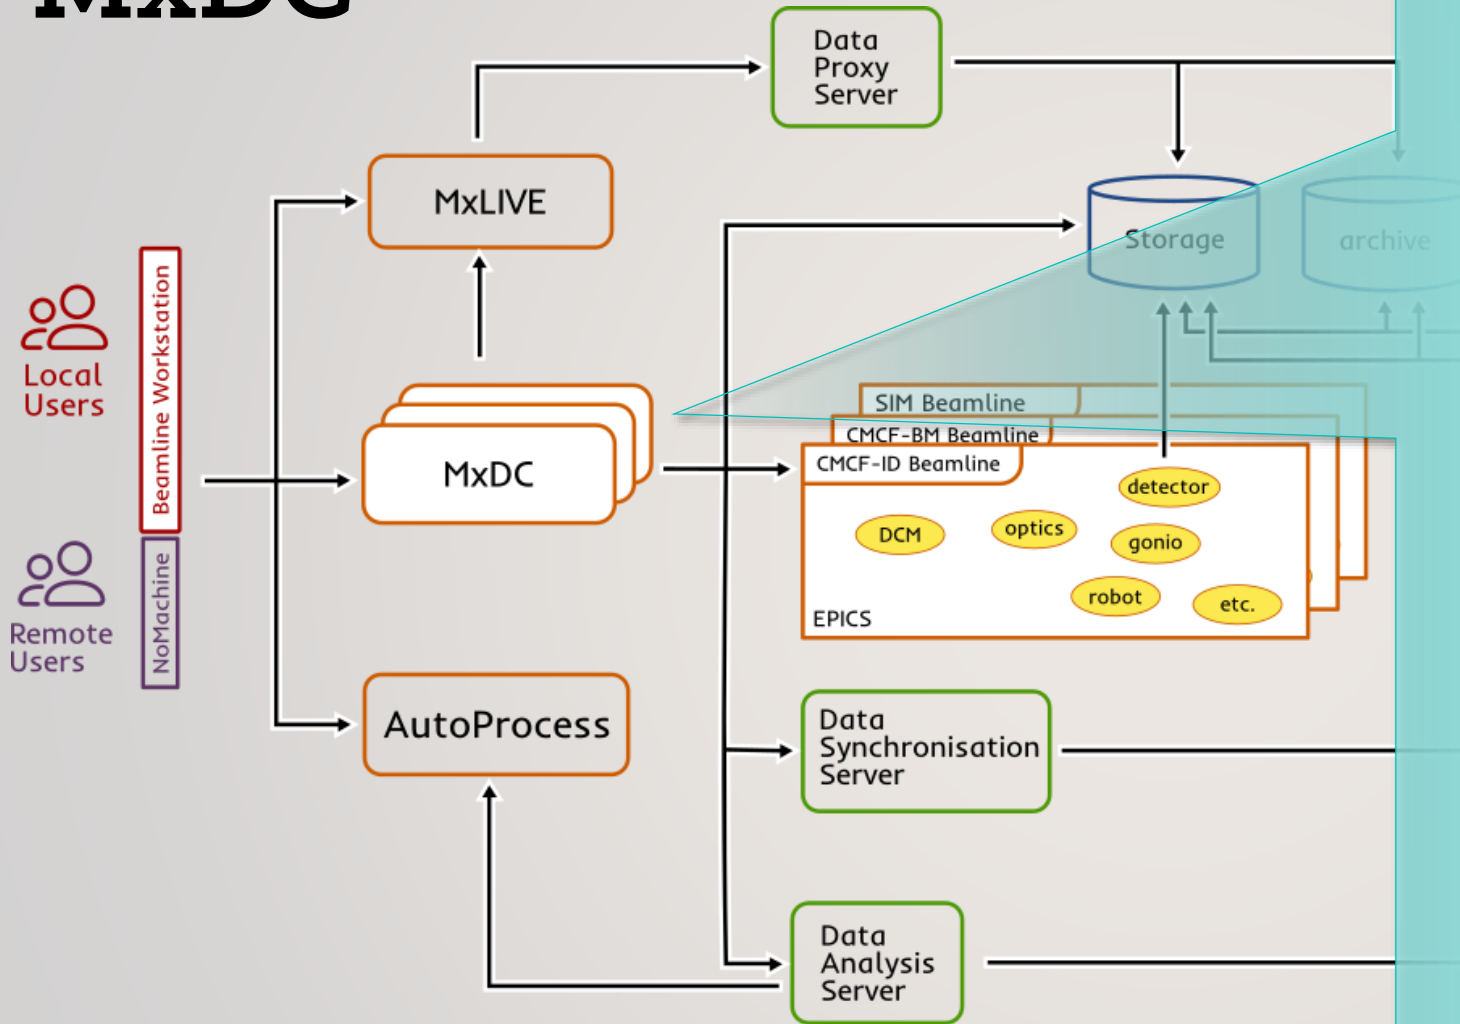

AutoProcess

- A set of command line utilities for automated reduction of diffraction data to “mtz”
- *Data Analysis Server* - an RPC server for automated data analysis from MxDC.
- Automated analysis of datasets from
 - MX
 - Powder Diffraction
- Integrated with MxDC
- Since 2007

MxDC

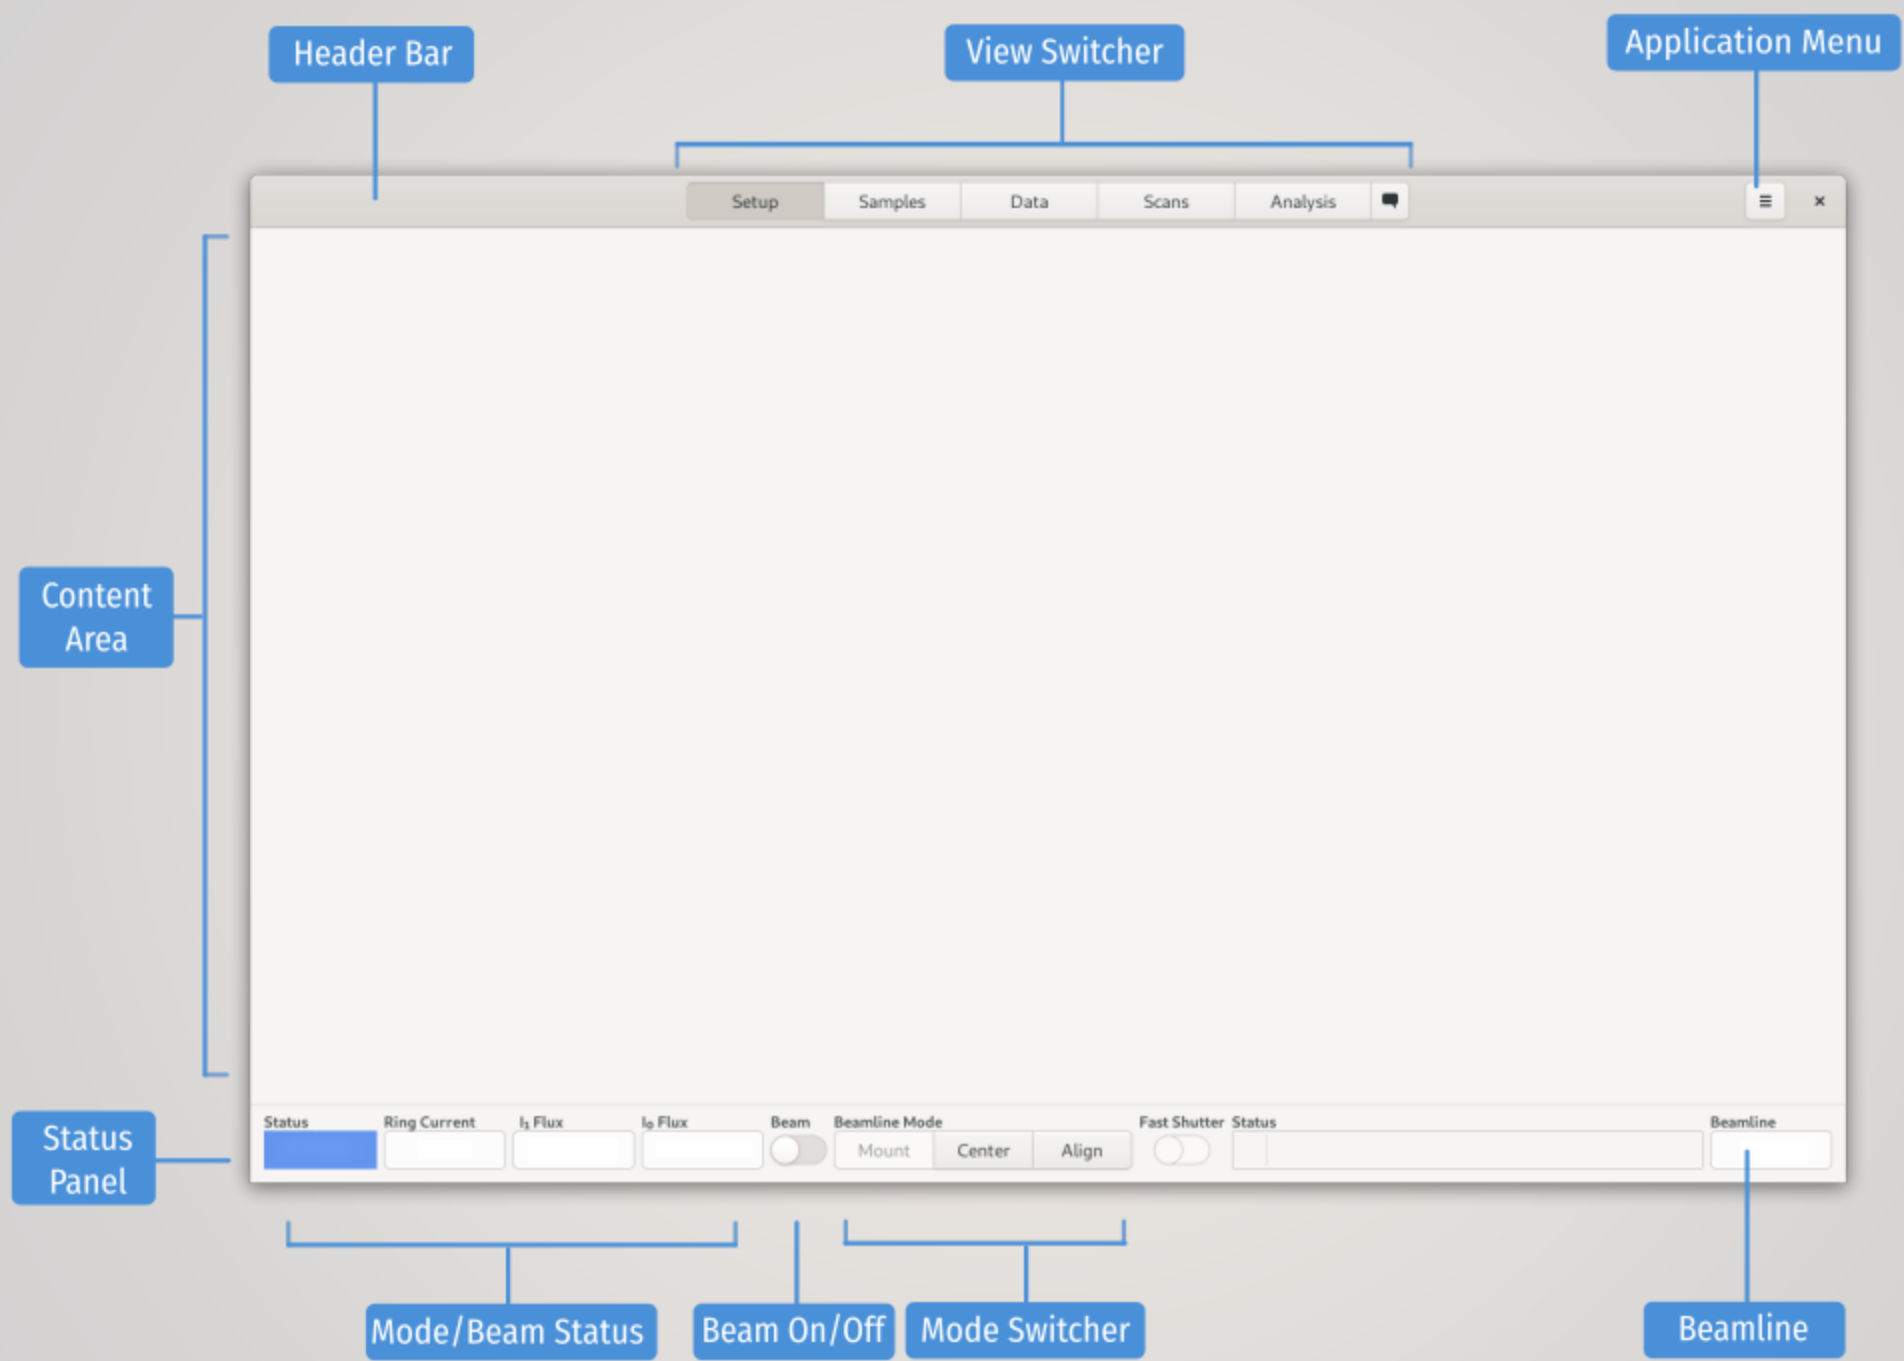

MxDC – Mx Data Collector

- Experiment management,
- Interactive and automated data acquisition
- One instance per beamline
 - Configuration file
- Single-window, multi-paged GUI
 - Setup, Samples, Data, Scans, Analysis Pages
- Separate Python-based SPEC-like Beamline console for staff and commissioning
- Since 2007

Design Principles

- **Users First!**
 - Experiment focused, NOT beamline focused
 - User friendly, intuitive & familiar GUI
 - Make common techniques easy, and complex schemes possible, without sacrificing usability.
 - Integration (Single GUI for all techniques)
- **Separation of Concerns**
 - Pluggable components
 - Versatile interfaces between components
- **Ease of deployment**
 - Focus on common functional aspect of devices relevant for experimental technique
 - Support different beamlines with different hardware devices
 - One Python Config file per beamline

Jun/29, 15:32

Hello, MxDC is show two errors in the log and I don't know why. Also I am not able to do fluorescence scans. Do you know what may be wrong?

Jun/29, 15:33

Hi Michell It looks like the fluoescen scan detector isn't connected right now.

Jun/29, 15:34

It is probably because we are in the middle of our shutdown. You will have to book time later once we have beamtime again.

Jun/29, 15:34

Thanks, would it be possible to fix it soon. It is very crucial for my experiment.

Jun/29, 15:35

I also noticed that my sample is not centering automatically.

Jun/29, 15:36

Yes, one of the errors you saw is for our automated machine learning centering, so you could carry on by manually centering your samples.

Jun/29, 15:36

Manual centering is too hard, I like the automated one.

» MxDC - Macromolecular Crystallography Data Collector

 MxDC

MxDC (Macromolecular Crystallography Data Collector) is a software package for acquisition of Macromolecular Crystallography data and related techniques at synchrotron beamlines. MxDC has been developed since 2006 and has been the primary software for data acquisition and experiment control at the Canadian Light Source Macromolecular Crystallography beamlines. It is also used at the Pohang Light Source II in South-Korea.

 Note

An earlier version of MxDC is described in the following publication:

MxDC and MxLIVE: software for data acquisition, information management and remote access to macromolecular crystallography beamlines. M. Fodje, K. Janzen, R. Berg, G. Black, S. Labiuk, J. Gorin and P. Grochulski J. Synchrotron Rad. (2012). 19, 274-280.
<https://doi.org/10.1107/S0909049511056305>

Although developed primarily for MX beamlines, MxDC is based on an extensible generic framework that can be used to develop data acquisition systems for different types of experiments and beamlines.

How to Use This Documentation

This documentation is divided into three sections targeted at different audiences. For MX beamline users primarily interested in using the MxDC GUI for data acquisition, it is recommended to start with the [Overview](#) section which describes the user interface. For beamline staff interested in
