

# Re-directing SDCC worker nodes to STAR Isobar analysis

- Request is detailed in a notable Performance Evaluation and Measurement Plan from DOE ONP to BNL/NPP management - the Isobar research must be published before the end of the fiscal year.
- A resource reallocation has been endorsed by NPP (ALD)
- A temporary (1 month) shift of resources, to allow the STAR Isobar analysis activities to finish by the end of FY21, is in effect since Tuesday, June 22
- This has resulted in a decrease of ~40% of resources to all other (including other analysis activities in STAR) activities at the SDCC
- Inform the SDCC management if this diversion adversely impacts your experimental deliverables, and we will address your concerns
