

# Collaboration Meeting

Friday 2021-07-08

**The Software and Computing WG Conveners:**  
Andrea Bressan (University of Trieste and INFN) ,  
Dmitry Romanov (Jefferson lab) ,  
Sylvester Joosten (Argonne National Laboratory) ,  
Whitney Armstrong (Argonne National Laboratory) ,  
Wouter Deconinck (The University of Manitoba)

# Simulation status (and “baseline” geometry implementation)

# Calorimetry WG

- Ready to study impact of magnet on HCAL:
  - ☒ Realistic HCAL geometry
  - ☒ Solenoid material
  - ☒ NEW Helmholtz added
  - ☒ HCAL clustering and energy calibration
- ECAL system well-developed:
  - Barrel ECAL:
    - ☒ Barrel SiW imaging calorimeter
    - ☒ Barrel hybrid SiW + WSciFi calorimeter
  - Electron-endcap ECAL:
    - ☒ Crystal calorimeter
    - ☒ Glass calorimeter
    - ☒ NEW Hybrid electron endcap for baseline
    -  WSciFi calorimeter
  - ☒ Reconstruction (2D, 2+1D and 3D clustering)
- Geometry:
  -  Finalize geometry for “baseline” setup with longer barrel/smaller negative endcap ECAL

Hybrid electron  
endcap calorimeter  
with crystal

Realistic HCAL

Forward shashlik  
calorimetry

Calorimetry delegate: Vladimir Berdnikov  
S&C WG contacts: Wouter Deconinck & Sylvester Joosten

# Far-forward & Far-backward WGs

- FF being worked on by Alex Jentsch
  -   Magnets and detectors updated to latest design
  -  Flip IR orientation to right-handed coordinate system (“big flip” in 2 weeks)
  -  Will add realistic beam-pipe model
- FB
  -   IR implementation

FF delegate: Alex Jentsch  
FB delegate: Jaroslav Adam  
S&C WG contact: Whitney Armstrong

# PID WG

- dRICH (Christopher Dilks, Chao Peng)
  - ✓ functioning fuzzy-K ring-clustering
  - ⚠ geometry being adjusted by Christopher
  - ✓ have field maps for both magnet setups
- mRICH (Murad Sarsour, Whitney Armstrong)
  - ✓ received baseline realistic geometry (implemented in fun4All) from Murad
  - ⚠ implement realistic detector in DD4hep (90% complete)
- DIRC (Grzegorz Kalicy, Dmitry Romanov)
  - ✓ simplified geometry
  - ⚠ implement realistic detector in DD4hep
- TOF (Zhenyu Ye)
  - ✓ LGAD implementation with realistic services

gas-RICH starting  
point for dRICH  
implementation

LGAD  
implementation  
ongoing (Zhenyu)

mRICH geometry  
changing quickly

DIRC needs the  
most work

# Tracking WG

Outer LGAD layer not part of the “0-0-0” setup

Barrel staves as in ITS2 TDR

-  silicon tracker
  -  Material validation (Shujie Li)
  -  Vertex layers to be changed to cylindrical geometry
  -  Support cones
-  barrel MPGD
  -   convert to mMGAS (Francesco Bossu)
-  GEM
- Reconstruction:
  -  geometries fully functional with ACTS
  -  updating algorithms for ACTS v8.3 (tracking benchmarks ongoing)

Disks are wedges with sensitive layer and average material backing. Needs better constraints from WG

# Physics WGs

-  Generic (unvalidated) afterburner
  -  Update afterburner based on the presentation by Brian Page
-  Collect physics analysis portfolio
-   First physics-ready production next week
  - gaps in baseline detector reconstruction filled-in with fastMC-style algorithms.
-   Tutorial example on data analysis

*Exclusive & Tagging delegate: TBD*  
*S&C WG contact: Sylvester Joosten*

*Inclusive delegate: Barak Schmookler*  
*S&C WG contact: N/A*

*Jets, HF & EW-BSM delegate: Brian Page*  
*S&C WG contact: Wouter Deconinck*

*SIDIS delegate: Christopher Dilks*  
*S&C WG contact: N/A*

# DAQ WG

*DAQ delegates: Alexandre Camsonne & Jeffery Landgraf*  
*S&C WG contact: Andrea Bressan*

# Tutorial plans

Documentation portal:

[doc.athena-eic.org](https://doc.athena-eic.org)

[Full simulation tutorials](#)

[eic-ip6-software-l@lists.bnl.gov](mailto:eic-ip6-software-l@lists.bnl.gov)

**#software-helpdesk** on Slack

1. Full reconstruction tutorial will be posted as online-only tutorial, with **#software-helpdesk** for support. We can organize an in-person Q&A session later as needed
2. Analysis tutorial/example on data analysis (aimed and Physics WGs). Will be as website.

# Computing Update

# Resource requirements

[illegible]

- **Still need initial estimates from exclusive, PID & calorimetry**
- Estimates are not carved in stone and we will explore synergies between WGs where appropriate
- Currently a lot of computing resources available!

# Large scale data productions

- Input: HepMC files preferred (`pip install mcconv` for other formats)
- Full simulation with current detector model, all bells and whistles:
  - Typical: 0.25 to 3.0 s/event, <500MB RAM RSS, 30 kB to 750 kB output size/event
  - Slightly decreasing performance as geometry features are added
  - Full ROOT files on S3 under [ATHENA/FULL/](#)
- Reconstruction
  - Focus on full calorimetry clustering (Ecal and Hcal), tracking will be added next
  - Reco ROOT files on S3 under [ATHENA/RECO/](#)
- Full simulation: ~weekly repetition; reconstruction: every few days
- Written to work on any slurm batch system; performed at Compute Canada
  - Currently also working on trial runs on OSG at the ~2k job scale for single particle events)

compute | calcul  
canada | canada

Simulations reruns are currently on hold until track reconstruction available and baseline geometry available.

# Overview of Available Productions

- DIS:  $\{5 \times 41, 18 \times 275\} \otimes \{\text{CC, NC}\} \otimes \{Q^2 > 10, 100, 1000 \text{ GeV}\}$  (1M each)
- EXCLUSIVE:
  - eslight rho test production in progress
  - pi-neutron, K-Lambda, K-Sigma in progress
- SINGLES
  - $\{3 \text{ to } 50 \text{ deg}, 45 \text{ to } 135 \text{ deg}, 130 \text{ to } 177 \text{ deg}\} \otimes \{e^-, \pi^+, \text{kaon}^0_L, \text{neutron}, \text{gamma}\} \otimes \{1, 2, 5, 10, 20, 50 \text{ GeV}\}$  (1M each)

Dashboards in progress...

# Software & Computing WG

Bi-weekly software meeting: Thursday 12:00pm EDT

## Software & Computing Conveners:

Whitney Armstrong, Andrea Bressan(\*), Wouter Deconinck, Sylvester Joosten, Dmitry Romanov  
(\*)- liaison to EICUG software group

## Day 0 WG support:

Kolja Kauder, Miguel Arratia, Stephen Sekula, Dmitry Romanov, Yulia Furletova, Andrea Bressan

## Full simulation/reconstruction team

Whitney Armstrong, Miguel Arratia, Wouter Deconinck, Sylvester Joosten, Jihee Kim, Chao Peng, Tomas Polakovic, Dmitry Romanov, Marshall Scott, Zhenyu Ye, Ziyue Zhang, Maria Žurek  
*...and a rapidly growing amount ATHENA collaborators!*

ATHENA central detector
