

Spectroscopy Update: $J/\psi\pi^+\pi^-$

Justin Stevens & Derek Glazier

for EIC Spectroscopy WG (proposal independent)

Model for X and $Y \rightarrow J/\psi \pi^+ \pi^-$

JPAC: PRD 102, 114010

$X(3872)$

Vector States

Event generator: elSpectro

Derek Glazier

Factorise 2 photon vertices

Generator available on GitHub: <https://github.com/dglazier/elSpectro>

Initial test sample

Discussion on slack: #software-helpdesk

- * $X(3872) \rightarrow J/\psi \pi^+ \pi^-$ with 5 x 100 GeV beams run through full simulation
- * Followed instructions for Tutorial Part 5 to make a few e^+e^- invariant mass plots
- * Reasonably good correlation between generated and reconstructed mass
 - * But, long radiative tail for $J/\psi \rightarrow e^+e^-$ due to old detector model (per Sylvester)
- * Initial sample was deleted. **New samples** (today) may be missing reconstruction(?):
 - * <https://dtn01.sdcc.bnl.gov:9000/minio/eictest/ATHENA/RECO/acadia-v1.0-alpha/SPECTROSCOPY/>
