This workshop will introduce the neutrino user community to the detector research and development facilities at Fermilab that are available for use by university and laboratory colleagues. There will be tours of the facilities and presentations on how to get started using them. We will also have presentations from former and current users on their experiences.

We are also very interested in feedback from the community on ways to improve the facilities to maximize their benefit to the community. There will be a session devoted to this feedback as well.

<b>Dates:</b>	from January 20, 2016 09:00 to January 21, 2016 18:00
<b>Timezone:</b>	US/Central
