

BNL Report

NNDC Vision & Mission

The National Nuclear Data Center (NNDC) vision is to be the premier global resource for nuclear data and plan to:

- Implement AI/ML algorithms to reduce the time from data publication to integration in a recommended library to less than two years.
- Establish an open data repository for low-energy nuclear physics.
- □ Advance dissemination efforts with modern and efficient software tools.
- □ Sustain a robust nuclear physics research portfolio, including the development of an experimental program to accelerate isotope production science.

The NNDC is the lead and largest unit of the U.S. Nuclear Data Program (USNDP), whose mission is to provide current, accurate, authoritative data for workers in pure and applied areas of nuclear science and engineering. This is accomplished primarily through the compilation, evaluation, dissemination, and archiving of extensive nuclear datasets. USNDP also addresses gaps in the data, through targeted experimental studies and the use of theoretical models.

Shaofei

It is with infinite sadness that we must inform you about Shaofei Zhu's passing on Monday November 1st, 2021. At the time of his death, Shaofei was a physicist working at the National Nuclear Data Center in Brookhaven Laboratory, specializing in nuclear structure and decay, and in particular gamma-ray spectroscopy and evaluation of nuclear data.

Shaofei was born in China, obtained his BS degree from the University of Science and Technology of China in 1992. He came to the US for graduate school, obtaining a Ph.D. in physics from the University of Notre Dame in 2004. During the 2004-2019 period Shaofei worked at Argonne National Laboratory, first as a post-doc and then as staff. Shaofei joined Brookhaven National Laboratory in May of 2019.

Shaofei was dedicated professional and a fantastic team player who always found time to help and mentor colleagues. His upbeat and friendly personality was cherished by all who were lucky to have known him at the professional and social level. We will be collecting notes of condolences to be sent to his family, please email us at <u>nndc@bnl.gov</u> if you'd like to contribute. A formal obituary will be published in Nuclear Data Sheets.

Other personnel changes at the NNDC

Ryan Lorek left the NNDC August 6th and is now a post-doc at NASA doing data science work.

Alejandro Sonzogni

promoted to Nuclear Science and Technology chair January 1, 2021

Andrea Mattera promoted

<u>Amber Lauer-Coles</u> joined the NNDC July 1st as a post-doc working on the Intentional Forensics NA-22 Venture project.

<u>**Donnie Mason**</u> was converted from SULI student to staff mere two months ago! He is working on improving web services. from post-doc to scientific staff October 2021

<u>Chris Morse</u> joined the NNDC March 2021 as scientific staff working on ENSDF

David Brown promoted to become NNDC group leader June 2021

This is in addition to our usual large number of student interns!

Postdoc in Nuclear Data

Job ID: 2797 Date posted: 09/10/2021

Brookhaven National Laboratory (www.bnl.gov) delivers discovery science and transformative technology to power and secure the nation's future. Brookhaven Lab is a multidisciplinary laboratory with seven Nobel Prize-winning discoveries, 37 R&D 100 Awards, and more than 70 years of pioneering research. The Lab is primarily supported by the U.S. Department of Energy's (DOE) Office of Science. Brookhaven Science Associates (BSA) operates and manages the Laboratory for DOE. BSA is a partnership between Battelle and The Research Foundation for the State University of New York on behalf of Stony Brook University.

Organizational Overview

Brookhaven National Laboratory's Nuclear Science and Technology Department conducts research and development related to nuclear technologies (reactors and accelerator-driven systems), reliability and risk

ENSDF posting coming and an additional ENDF later

7

NNDC Funding and FTE evolution in the last 7 years

 We currently have a post-doc ad, looking to hire <u>2-3 postdocs</u> later in the year.

8

 Additionally, we are working on an <u>assistant scientist</u> personnel requisition for FY23.

Highlights

(some expected, some not!)

Public Reusable Research (PuRe) Data

Public Reusable Research (PuRe) Data is a designation for key data repositories, knowledge bases, analysis platforms, and other activities that strive to make data publicly available to advance scientific or technical knowledge. Spanning the range of the DOE Office of Science (SC) mission, these data resources include a data center for atmospheric data and model products, data repositories and knowledge bases for biological and environmental research, and a materials database for physical sciences. Each resource is an authoritative provider of data or capabilities in their respective subject area. Together, these high-quality public resources play a strategic role in advancing the SC mission while making data easier to find, access, and reuse across the broader scientific community.

Designation as a PuRe Data Resource does more than simply recognize the importance of these investments -- it carries the weight of SC stewardship. SC manages these resources under an oversight model with high standards for data management, resource operations, and scientific impact. The designated PuRe Data Resources go above and beyond the standard SC requirements for data management plans and act as community leaders in data stewardship.

Comparison with a Monte Carlo decay code simulations. CARIBU facility, the reactor facility at TAMU.
- 2021Mi07 Phys.Rev. C 103, 024323 (2021) A.J.Mitchell, R.Orford, G.J.Lane, C.J.Lister, P.Copp, J.A.Clark, G.Savard, J.M.Allmond, A.D.Ayangeakaa, S.Bottoni, M.P.Carpenter, P.Chowdhury, D.A.Gorelov, R.V.F.Janssens, F.G.Kondev, U.Patel, D.Seweryniak, M.L.Smith, Y.Y.Zhong, S.Zhu Ground-state and decay properties of neutron-rich 106Nb RADIOACTIVITY 106Nb(beta-)[from 252Cf(SF), CARIBU radioactive-ion-beam facility at ANL, followed by mass separation and measurement using Multi-Reflection Time-of-Flight (MR-TOF) mass separator and Canadian Penning Trap (CPT)]; measured CPT spectra, E gamma, I gamma, beta gamma gamma-coin, half-life of 106Nb decay using five HPGe clover detectors, and a plastic scintillator at the X-Array and SATURN decay-spectroscopy station. 106Mo; deduced levels, J, pi, apparent beta feedings, range of logft values, configurations. 106Nb; discussed spin, parity and configurations of the ground state. Comparison with earlier experimental results. ATOMIC MASSES 106Nb; measured cyclotron frequency using the Phase-Imaging Ion-Cyclotron-Resonance (PI-ICR) technique, CPT spectra; deduced mass excess. Comparison with previous measurement, and with AME 2016 evaluation.
- 2021Su02 Phys.Rev. C 103, 014319 (2021) S.Suman, S.K.Tandel, A.Kumawat, S.G.Wahid, M.Hemalatha, P.Chowdhury, R.V.F.Janssens, M.P.Carpenter, T.L.Khoo, F.G.Kondev, T.Lauritsen, C.J.Lister, D.Seweryniak, S.Zhu Nanosecond isomers and the evolution of collectivity in stable, even-A Hg isotopes NUCLEAR REACTIONS 197Au(209Bi,X),E=1450 MeV; 197Au(207Pb,X),E=1430 MeV; measured E gamma, I gamma, three- and higher fold gamma gamma-coin, gamma gamma(theta)(DCO), half-lives of nanosecond isomers by gamma gamma(t) using pulsed beams from ATLAS-ANL accelerator, and Gammasphere array of 100 Compton-suppressed HPGe detectors. 198,200,202Hg; deduced levels, J, pi, multipolarities, B(E2), configurations, band crossings, and collectivity; calculated total energy surface plots, neutron and proton quasiparticle energy levels using the Ultimate Cranker code. Systematics of nanosecond isomers, half-lives and B(E2) in 192,194,196,198,200,202,204Hg.
- 2021Za06 Phys.Rev. C 104, 014607 (2021) J.C.Zamora, C.Sullivan, R.G.T.Zegers, N.Aoi, L.Batail, D.Bazin, M.Carpenter, J.J.Carroll, Y.D.Fang, H.Fujita, U.Garg, G.Gey, C.J.Guess, M.N.Harakeh, T.H.Hoang, E.Hudson, N.Ichige, E.Ideguchi, A.Inoue, J.Isaak, C.Iwamoto, C.Kacir, N.Kobayashi, T.Koike, M.Kumar Raju, S.Lipschutz, M.Liu, P.von Neumann-Cosel, S.Noji, H.J.Ong, S.Peru, J.Pereira, J.Schmitt, A.Tamii, R.Titus, V.Werner, Y.Yamamoto, X.Zhou, S.Zhu Investigation of the isoscalar response of 24Mg to 6Li scattering NUCLEAR REACTIONS 24Mg(6Li,6Li'),E=100 MeV/nucleon; measured scattered 6Li particles, sigma(theta) using Grand Raiden spectrometer and two position-sensitive multiwire drift chambers (MWDCs) and three plastic scintillators for particle identification and reconstructing their trajectories at RCNP-Osaka University; deduced differential sigma(E,Q), angular momentum transfers by fitting with multipole-decomposition analysis (MDA) using DWBA calculations for angular-momentum transfers. 24Mg; deduced energies, widths, EWSR, isoscaler giant monopole resonance (ISGDR), isoscaler giant quadrupole resonance (ISGQR) strength functions from Lorentzian fits to data. Comparison with antisymmetrized molecular dynamics (AMD) calculations, and with previous experimental data.
- 2021MaZZ BNL-220804-2021-INRE (2021) A.Mattera, A.A.Sonzogni Revision of Fission Yields Uncertainties in ENDF/B-VIII.0 NUCLEAR REACTIONS 227,229Th(n,F), E thermal; 232Th(n,F), E=0.5,14 MeV; 231Pa(n,F), E=0.5 MeV; 232,233,235U(n,F), E thermal; 233,234, 235,236,238U(n,F), E=0.5,14 MeV; 237U(n,F), E=0.5 MeV; 237Np(n,F), E thermal; 237Np(n,F), E=0.5,14 MeV; 238Np,238,241Pu(n,F), E=0.5 MeV; 239,240,241,242Pu(n,F), E thermal; 239Pu(n,F), E=0.5,2,14 MeV; 240, 242Pu(n,F), E=0.5,14 MeV; 241,242Am(n,F), E thermal; 241Am(n,F), E=0.5,14 MeV; 243Am,242,243,244,246,248Cm(n,F), E=0.5 MeV; 243,245, 249Cm,251Cf,254Es,255Fm(n,F), E thermal; analyzed available dat; deduced neutron fission yields corrections. ENDF/B-VIII.0 library. RADIOACTIVITY 238U,244,246,248Cm,250,252Cf,253Es,254,256Fm(SF); analyzed available dat; deduced spontaneous fission yields corrections. ENDF/B-VIII.0 library

Structure Measurements Highlights

Gamma-ray spectroscopy of the β -decay of ¹⁴¹Ba for a beta-feeding benchmark comparison of HPGe spectroscopy to TAGS

Javier Rufino Jr^{1,2}, E. A. McCutchan², S. Zhu^{2,3}, A. A. Sonzogni², M. Alcorta³, P. F. Bertone³, M. P. Carpenter³, J. Clark³, C. R. Hoffman³, R. V. F. Janssens³, F. G. Kondev³, T. Lauritsen³, C. J. Lister³, R. Pardo³, A. Rogers³, G. Savard³, D. Seweryniak³, R. Vondrasek³

Submitted to Physical Review C

- >70 additions to the level scheme
- Excellent agreement with TAGS
- New measurement of absolute Ig
- >20 new spin determinations
- Javier now PhD student in Nuclear Physics at Notre Dame!

Improving Decay Data on Promising Medical Isotope ¹⁸⁶Ir

- Ir used in chemotherapy treatment
- ¹⁸⁶Ir both Auger emitter and potential SPECT
- Perform therapy and imaging simultaneously
- Last measurement nearly 50 years ago

	Levels in	¹⁸⁶ Os as Populated fr	D			
		Levels in ¹⁸⁶ Os as Populated from Decay of 15.8-h ¹⁸⁶ Ir [†]				
K. J. Hofstetter* Cyclotron Institute and Department of Chemistry, Texas A & M University, College Station, Texas 77843, and Department of Chemistry University of Kantuchy Lavindon Kantuchy 40506						
30000 20000 62 10000	297 137 2* 	435-Gate 622 1000				

- Significant level scheme revision
- > 100 new transitions
- Substantial revision to existing placements
- Sophia will start PhD in Nuclear Physics at University of Montana next Fall !

Reaction Highlights

CSEWG news:

- Mini-CSEWG August 2021
- ENDF/B-VIII.1 delayed until Feb. 2024
- Developing review system for library

NNDC reaction work:

- Published: INDEN Cr evaluations
- Submitted: ⁸⁶Kr evaluation
- In prep.: Resonance reclassification (6 interns: S. Hollick, P. Rodriguez, S. Scoville, M. Fucci, S. Ruiz, R. Crawford)
- In prep.: URR PT development (1 intern: M. Mclaurin) Brookhaven National Laboratory

Fission Yield Highlight

- Retrieval, and compilation of over 538 independent isomeric yield ratios, from 39 compound nuclei, and 62 unique fission products.
- Identification of outliers (decay data, isomeric state assignments, trends vs IYR in other measured systems)
- New recommended experimental yields ratios for low-energy neutron induced fission and SF

C. Sears, *et al.* "Compilation and Evaluation of Isomeric Fission Yield Ratios." *Nucl Data Sheets* 173 (2021): 118.

Work on Fission Yields retrieval, compilation and update continues to include ^{241,239}Pu...

C. Sears (Smith College)

D. Potemkin (SUNY Stonybrook)

New directions

(some expected, some not!)

Gamma-Rays Induced by Neutrons (GRIN) – NA-22 Multilab project

• Oct. 28th kickoff

tional Laboratory

- Led by BNL, with LLNL & LBNL
- Aimed at improving inelastic and capture reaction gamma production simulations
- Serves both non-proliferation & space science
- An opportunity to bridge ENSDF & ENDF workflows

This project & RHIC fixed target experiments as way to engage NASA

Nowicki, S. F., et al, (2017), Modeled Martian subsurface elemental composition measurements with the Probing In situ with Neutron and Gamma ray instrument, Earth and Space Science, 4, 76–90, doi:10.1002/2016EA000162.

Accurate Decay Data for Forensics

- The International Monitoring System of the CTBT is a worldwide network of radiation detectors, continuously monitoring for the presence of radionuclides that can provide evidence of a nuclear event
- The most common way to identify fission products and determine their yield, is to measure the characteristic γ-rays emitted in their decay ("activation technique")
- Proposed new measurement campaign to improve knowledge of nuclear decay data (*i.e.*, γ-ray energy and intensities)

FY21 Measurements

lodine-130

- "blocked" fragment, highly-sensitive to fuel/n-energy changes
- ENSDF based on a 1973 measurement, with more recent experiments reporting intensities disagreeing by as much as 10%

Lanthanum-140

- along with Ba-140, is a well-known chronometer used to date a nuclear event
- evaluated intensities originate from a single publication from 1991

data currently being analyzed and readied for publication...

Intentional Forensics

NA-22 Venture

- Neutronics modeling of taggant performance
- ENDF/B-VIII.0 being used to model taggant effects & performance
- We are developing nuclear data "quality" metric to guide AI/ML optimizations ("feature engineering")

Effect of Concentration on Burn Cycle Length for Five Taggant Candidates

Plots from A. Cuadra & summer interns C. Sears, S. Jones, E. Schess

BNL making significant investment in Nuclear Data and Related Infrastructure

Program Development funds for $\alpha\beta\gamma$ spectrometer

Precision decay studies Complements in-house production capabilities (BLIP and tandem)

PD funds for fission yield measurements at NSLSII

(a) MIRION XRF detector (ordered, fabricated in EU, will arrive BNL in September 2021)

(b) HEXITEC XRF detector (loaned, tested at NSLS-II)

LDRD funding for Silica NanoCages

Trapping noble gases for medical isotopes, energy and nonproliferation

BLIP, CFN, NNDC Collaboration
