

Hi all,

Here is the minutes from today's meeting.

o Production status <Itaru>

- The shipping contract was made for RIKEN->Taiwan->BNL for silicon sensors with the shipping company, Hitachi Vantec Forwarding co. The contract includes Taiwan->BNL shipping, insurance, and US tax. They are all charged to RIKEN. The package should be ready for shipping and taken care by Taiwan agency office of Hitachi co.

- Conversion cable connector design is received from Hayashi-REPIC and posted in wiki. The mapping seems to be OK. There are a few question in the bus extender connector design, e.g. 1) screw hole design seems to be inconsistent with the latest 1.1m bus extender connector design. The holder design to prevent the connection becomes loose for the ROC side connector needs to be addressed with REPIC engineer.

- Thanks to Cheng-wei and Rob for finding components for the beam clock distribution board for cheaper price. Itaru will consult with ARS co. to see if there is still a room to reduce the cost even though components mount becomes manual. Itaru check with Rob if the products can be delivered in a reel even for 50pcs.

o NWU test bench <Takashi>

- The DAQ has been unstable in the NWU test bench these days and the Taiwan ladder testing has been postponed. NWU crews are now under investigation. The ladder testing will be resumed as soon as stable operation is back.

o Taiwan assembly <Cheng-Wei>

- Assembly is going on. Will be updated next week.

o BNL update <Genki>

- Started testing encapsulated ladders. The DAQ is running smoothly. The short term plan is to test one or two ladders per day.

- **Genki** looks for the beam clock distribution board components in FVTX cabinet. See Eric Mannel for help.

- **Genki** looks for FEM/FEM-IB boards (may be still in 1008).

- **Itaru** look for INTT software status inquirely he received sometime ago in e-mail.

- A technician is working on the dark box for the Tohoku beam test assembly this week. Genki will take a look once it is done.

Best regards,

-itaru
