

Dear all,

Here is the agenda from today's meeting.

---

The meeting time/date will change from next one since the day light saving time end on this Sunday. New meeting time is

Thursday evening in BNL time = Friday Morning in Asian Time

o Beam Test Preparation <Genki>

- Japanese regulation will be relaxed starting from Nov. 8th, next week.
- Any volunteers for the online analysis software development are welcome. People in US are encouraged to contribute remotely. Please let Genki know your interest.
- **Genki** will check the conversion cables in BNL and update the database. Consult with Rachid to send the conversion cables to Japan for the beam test if extra cables are found in BNL.

o Taiwan Ladder Performance <Yumika>

- The source test data were taken for the one side of Taiwan ladder. The distribution look nice after 4 hours of data taking and found no dead channel nor noisy chips.

o Production Status <Itaru>

- 11+2 HDI's are to be shipped to NCU on Nov. 9th.
- Itaru will post the latest conversion cable connector design files to wiki. You are encouraged to check them.
- Interception board may trigger half entry to Chip-6 and Chip-19, since these chips have longest signal path on the board, which can defect the transmitting signal.
- Wei and Purdue group contact with Jin Huang to ask if there is any template for the dead maps. It can be a jump start if there is.

Regards,

-iitaru
