

Tools and Services Activity Summary

USATLAS Website:

- Pre-production USATLAS site (<https://www.usatlas.bnl.gov>) was released to users on 12/1, campus access only until user verification is complete. The technical document elaborating the migration process and future development collaboration procedures was drafted and shared with the vendor (DataArt)

DocDB

- Two DocDB instances were released to sPhenix (one brand new, one for legacy DocDB site), received positive user feedback so far, still awaiting further verifications by users

dCache support

- **ATLAS:**
 - NFS4.1 door upgraded to 7.2.5 to address issue of writing into space reservations
- **Pre-production/QoS:**
 - Upgraded to 7.2.5 dCache release
 - Extension with more analytics capability

General Web Services

- Working on a 'pre-registration' form to be used with Federated ID-related projects (initially JupyterHub, but eventually can be used with other services) in conjunction with Jerome Lauret.
- Update to the sPHENIX theme to enable site upgrade to D9.
- SDCC meets regularly with Charity Plata to update facility documentation. Group leaders have begun to receive edited copy from Charity. The responsibility now falls within the groups for content to be updated and entered into Drupal. Charity is working on the tranche of documentation sent to her following Tuesday's meeting. We are beginning to discuss matters of organization and improvements to information architecture with Charity's feedback as well.
