SCI NEWS

CERN Physicists Directly Observe Fundamental Phenomenon in Quantum Chromodynamics

May 19, 2022 by News Staff / Source

A charm quark (c) in a parton shower loses energy by emitting radiation in the form of gluons (g). The shower displays a dead cone of suppressed radiation around the quark for angles smaller than the ratio of the quark's mass (m) and energy (E). The energy decreases at each stage of the shower. Image credit: Daniel Dominguez / CERN.

Good description of the data in general

Deviations in the low-z region

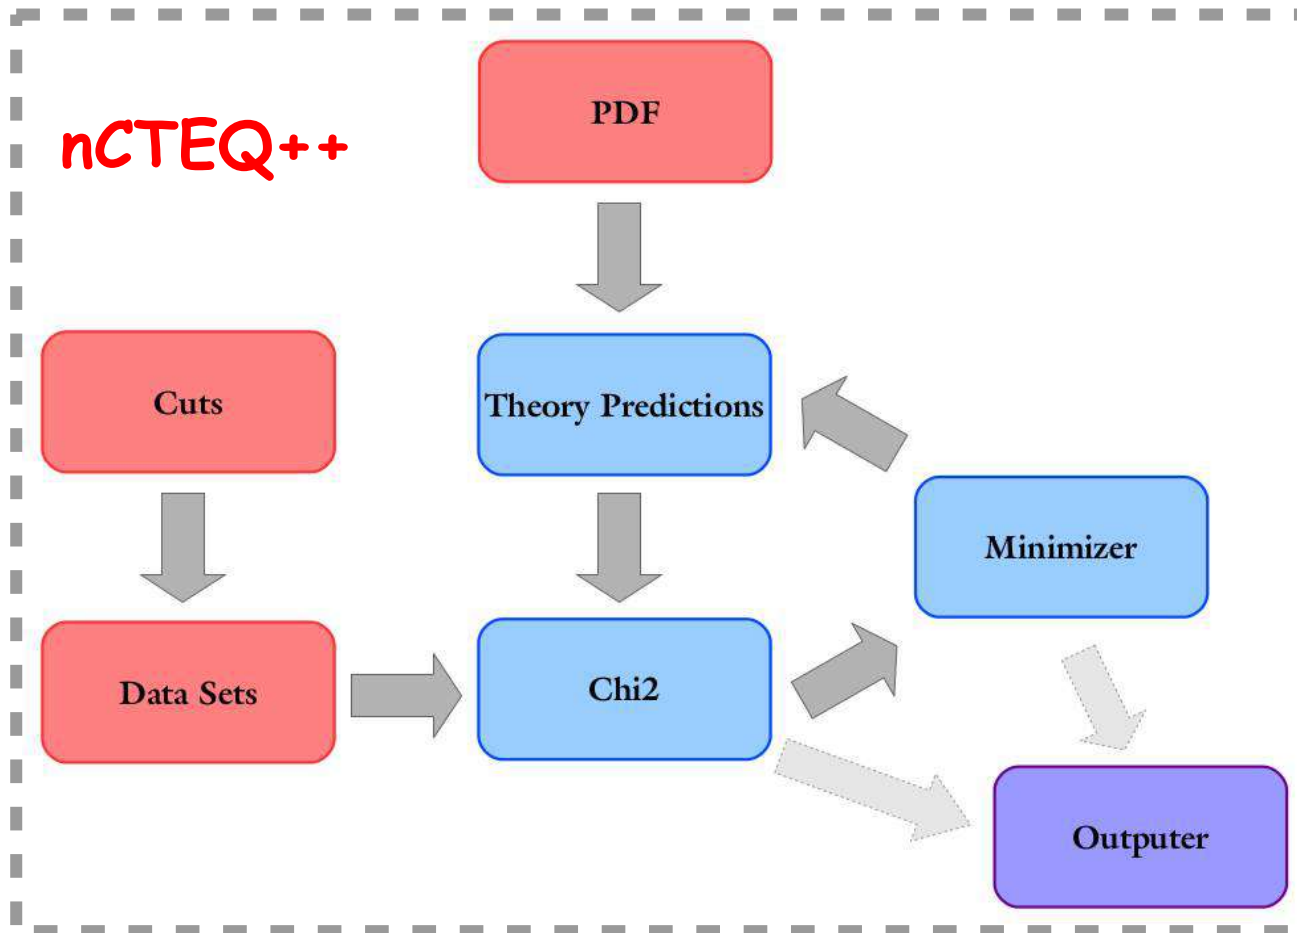

BELLE and BaBar data pull in opposite directions

Clearly further investigation is warranted

nCTEQ++

a modern, modular code base

Top level C++, modular structure, output to YAML & Python scripts

Use external programs

- Minuit
- HOPPET
- MCFM
- APPLgrid

Pre-Computed Grids

Tremendous speed-up for higher order calculation

... for example ...

High order DIS processes
(Peter Risse)

Special thanks to:

*Tomas Jezo
Eric Godat
Florian Lyonnet
Aleksander Kusina*

Code benchmark timings:

Original Fortran Code

contains multiple levels of integrals

New C++ Code

using modern grid techniques

Typical fits current run a few days to a week.
This will be reduced to a few hours.

High order DIS processes
(Peter Risse)
