

Status of the ADVANCE CI/CD

David Brown
National Nuclear Data Center

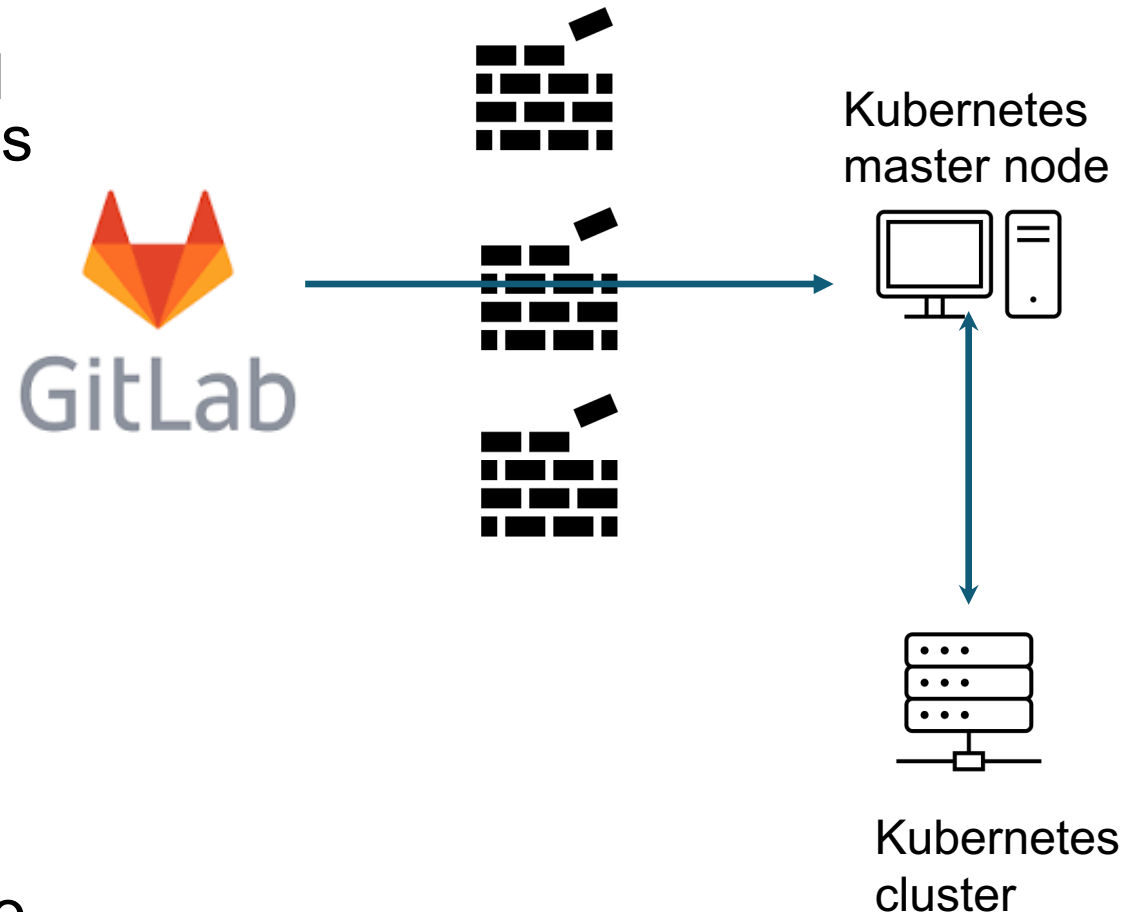

31 October 2022

@BrookhavenLab

ADVANCE is still down

- Gitlab's Ci/CD configuration controlled by per-project YAML file anyone who is part of the project can edit.
- To prevent accidental (or intentional) troubles, must execute checking code in container
- Two configuration requirements Gitlab.com has not anticipated:
 - Our cluster must live behind firewall
 - Legacy checking codes need temp space
- Gitlab engineers are working with us to resolve issues*

*as of Friday, they may be resolved, but we haven't had time to test

Simpler reports

- Reports will be per-commit, on any git branch
- They must be light weight, but not compromise content
- Solution:
 - Summary PDF, per code, replacing website
 - Any important build artifacts made by code (xsdirt, ace files, ...)
 - Pictures & lists of bugs in summary PDF

Thanks to:

- Ramon Arcilla (BNL-NNDC) for fighting the fight with GitLab and
- Rebecca Coles (BNL-NNP) for creating the simplified PDF reports
