Job Submission to-do list with Fun4all

- **Fresh copy of simulation tool kit**
- **Create production Branches**
 - Different scattering parameterization.
 - Turning on and off the beam after-burner.
- **Create Configuration files**
- **Create file list (with input location)**
- **submit Test jobs [Done by 20, June]**

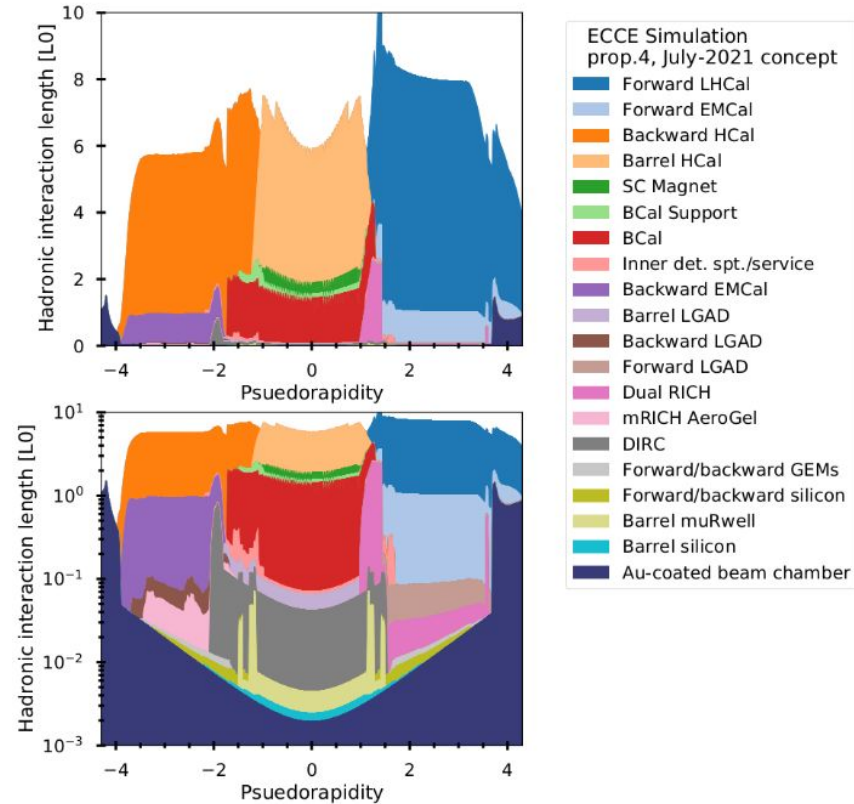

DD4Hep

-
- **Implement babar magnet file map**
-
- **Test job**

I will work with Sylvester and Wouter on the configuration steps.

Details

- **Documentation:**
 - Spreadsheet during the production
 - Wiki to report final location
- **Do we need to produce material map?**
- **Is analyzing DST tree part of the production? (Fun4all specific)**
- **Validation and feedback mechanism?**

Question to Cherenkov PID Group

- **Would the 35cm shift for dRICH be implemented before or after the 1st simulation launch?**
- **That is the plan to validate the new detector location?**
