ZDC update

1. Current priority is to go from deposited energy to something close to real digitized signals with some model of noise
2. This is needed to evaluate tradeoffs in performance/granularity/cost
3. Also hope to start development of low energy cluster finder.
4. Simulations will stay in Fun4All for the moment.
5. Vacuum model looks reasonable
6. Current discussion about beam pipe ongoing
7. Norwegian group has applied for R&D funds.
