

Diversity, Equity and Inclusion

- Ann Nelson: *“Let me be clear. If your career is established and you are not making an explicit and continual effort to encourage, mentor, and support all young physicists, to create a welcoming climate in your department, and to promote the hiring of diverse faculty members, you are part of the problem.”* - Physics Today, May 2017

- What does that mean within the EIC theory context?
 - What are the key challenges in recruiting and retaining a more diverse group of students, postdocs and scientists, in particular in nuclear theory?

 - What are the key challenges in recruiting and retaining a more diverse group of students, postdocs and scientists, in particular in nuclear theory?
 - What are the best ways in which an EIC theory alliance (EICTA) could support diversity and inclusion?
 - If an EICTA supports various groups in some form (bridge positions, postdoc fellowships, ...), how should diversity factor into the process by which such support is allocated? Should EICTA only support groups that commit to hiring that explicitly accounts for diversity in some way?
