

Sorry, there was incorrect sentence the minutes I sent originally. Here is the corrected version.

o Barrel testing <Genki>

- 4 Taiwan ladders installed to the east barrel appeared to be noisy. Replaced 2 out of 4 Taiwan ladders by 2 BNL ladders. The 2 replaced BNL ladders are not noisy. It is likely to replace remaining 2 more Taiwan ladders by BNL ladders to see if we can get rid noise as a next step. All agree about as long as it is that is the plan.

o Database <Itaru>

- **Itaru** will prompt Martin again if postgres-SQL can be installed to the 2nd Felix server without the root account.

- **Genki** upload all existing calibration data to remote computer.

- **Takashi** send the hardware ID definitions to Purdue group.

- **Purdue** develop calibration database.

- **Joseph** travels to BNL on October primarily for the barrel testing with 2nd Felix server. Joseph may develop the API for the calibration data taking on top of the rcdaq and result storing to the database while his stay in BNL.

- **Itaru** proposed the new packet-ID following Martin's suggestion "one packet-ID per one felix". **Itaru** will provide this to Raul.

- **Itaru** will ship 18 production beam clock boards again to BNL on next Monday, 12th.

Best regards,

-itaru
