

# ROUND TABLE #2 POSSIBLE HEP-NP SYNERGIES A SUMMARY

- Klaus Dehmelt
- CPAD 2022 Workshop
- December 02, 2022

Stony Brook **University**

| The State University of New York

# DESCRIPTION OF THE ROUNDTABLE

2

- Identify specific applications and technologies that are of common interest. Identify specifications for EIC and e.g., future collider detectors. In which cases can EIC detector(s) be used as demonstrators for future collider detector needs? How can we improve collaboration and funding synergies (e.g., common FOAs or LDRDs?) between EIC and HEP communities?
- Please note: EIC is one application of Nuclear Physics
  - Others
    - ✦ CEBAF
    - ✦ FRIB
    - ✦ ALICE @ LHC
    - ✦ Fixed target experiments @ SPS ...

# EIC PROJECT DETECTOR

## EPIC - Baseline Design

3

### Magnet

- New 1.7 T SC solenoid

### Tracking

- Si Vertex Tracker MAPS/ITS3 wafer-level stitched sensors
- Si Tracker MAPS/ITS3/EIC barrel and disks
- MPGDs ( $\mu$ RWELL/MMG) cylindrical and planar

### PID

- high performance DIRC (hpDIRC)
- dual RICH (aerogel + gaseous)
- aerogel RICH/modular w/ Fresnel **or** proximity focussing RICH
- ToF using AC-LGAD

### EM Calorimetry

- SciGlass **or** Imaging EMCal
- finely segmented W/SciFi EMCal
- $\text{PbWO}_4$  EMCal

### Hadron Calorimeter

- re-used sPHENIX Fe/Sc
- long. separated Fe-W-Sc calorimeter w/ high- $\eta$  insert

# EIC DETECTOR R&D EFFORTS

## New Generic R&D Program 2022+

- After lots of efforts: Generic program reconstituted starting this year
  - ▶ funded by DOE, coordinated by JLab
  - ▶ [https://www.jlab.org/research/eic\\_rd\\_prgm](https://www.jlab.org/research/eic_rd_prgm)
  - ▶ total of 30 proposals were received on July 25, 2022

Topic
CSGlass for hadron calorimetry at the EIC
A proposal for MPGD-based transition radiation detector/tracker
Continued Development and Evaluation of a Low-Power High-Density High Timing Precision Readout ASIC for AC-LGADs (HPSoC)
A new radiation tolerant low power Phase-Locked Loop IP block in a 65 nm technology for precision clocking in the EIC frontend electronics
Refined Methods for Transfer Matrix Reconstruction Using Beamline Silicon Detectors for Exclusive Processes at the EIC
Development of a Novel Readout Concept for an EIC DIRC
Tracking and PID with a GridPIX Detector

Particle identification and tracking in real time using Machine Learning on FPGA
Superconducting Nanowire Detectors for the EIC
EIC KLM R&D Proposal
Development of Thin Gap MPGDs for EIC Trackers
Simplified LGAD structure with fine pixelation
Imaging Calorimetry for the Electron-Ion Collider
Silicon Tracking and Vertexing Consortium, Section 1: Embedded Monolithic Active Pixel Sensor R&D
Silicon Tracking and Vertexing Consortium, Section 2: Aluminum Flexible Circuit Manufacturing Capability

Tracking PID Calorimetry Software/AI ASICs/FEE

EURO-LABS project

EURO-LABS is a project that mostly provides funding for Transnational Access (TA) to Research Infrastructures (RI).

For us this means test beams and irradiation facilities.

Total EURO-LABS EU funding: **~15 M€**

- **Start of the Project:** **01/09/2022**
- **Duration:** 01/09/2022 - 31/08/2026
- **Budget for WP4:** **~3.2 M€**

**First EU project that brings together Nuclear Physics, HEP Accelerators and HEP Detectors**

# SNOWMASS — ECFA ROADMAP - AIDAINNOVA

5

## Summary

- EC-funded detector initiatives are a **unique forum** to exchange knowhow, unfold synergies and enhance coherence in European detector R&D
- AIDAINNOVA started on April 1, 2021: **10 M€** of EU contribution, total budget of **26 M€** (4 years)
- Targeted applications in line with **European Strategy** Update the ECFA DRD groups and the **Snowmass EF** report
  - Future large  $e^+e^-$  colliders (FCC-ee, CEPC, ILC), EIC, pre-TDR fixed target experiments
  - Pre-TDR LHC upgrades (ALICE LS3, LHCb LS4)
  - Accelerator-based neutrino experiments (DUNE)
- Increased focus on integration with **industrial partners**

# DESCRIPTION OF THE ROUND TABLE

6

- Identify specific applications and technologies that are of common interest. Identify specifications for EIC and e.g., future collider detectors. In which cases can EIC detector(s) be used as demonstrators for future collider detector needs? How can we improve collaboration and funding synergies (e.g., common FOAs or LDRDs?) between EIC and HEP communities?
- Please note: EIC is one application of Nuclear Physics
  - Others
    - ✦ CEBAF
    - ✦ FRIB
    - ✦ ALICE @ LHC
    - ✦ Fixed target experiments @ SPS ...

# A KIND OF SUMMARY - ROUND TABLE #2

7

- Detector R&D is a program in DOE-HEP
- Detector R&D is project dependent in DOE-NP
- What are commonalities/differences of getting physics observables? For instance: trigger requirements? Collision species? Collision rates?
- Many common technologies
- Testbeam facility is already a synergistic effort → FTBF
- P5 → can it be extended to NP?
- Funding sources in general: is overlap allowed?
- Funding agencies cannot support specific experiments installations → restrict requests to detector R&D
- Explore “interdisciplinary” structure of funding agencies
- Users need to act → explore a request for an inclusive generic R&D program
