Electron-Ion Collider

## IR requirements \& parameters

|  | $1{ }^{\text {st }} 1 \mathrm{R}$ |  | $2^{\text {nd }} \mathbf{I R}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | proton | electron | proton | electron |
| Detector occupied region | $\begin{gathered} -4.5 \mathrm{~m}+5.0 \mathrm{~m} \\ \text { Beam elements }<1.5^{\circ} \text { in main } \\ \text { detector } \end{gathered}$ |  | $\begin{gathered} -4.5 \mathrm{~m}+5.0 \mathrm{~m} \\ \text { Beam elements }<1.5^{\circ} \text { in main } \\ \text { detector } \end{gathered}$ |  |
| Polarimetry | Yes (IR4) | local | Yes (IR4) | local |
| $2^{\text {nd }}$ focus | No |  | yes |  |
| $\begin{aligned} & \beta^{*} @ 275 \mathrm{GeV}(\mathrm{~h}), 10 \\ & \mathrm{GeV}(\mathrm{e}) \end{aligned}$ | $\begin{aligned} & \beta^{*}=80 \mathrm{~cm} \\ & \beta^{*}=7.2 \mathrm{~cm} \end{aligned}$ | $\begin{aligned} & \beta^{*}=45 \mathrm{~cm} \\ & \beta_{y}^{*}=5.6 \mathrm{~cm} \end{aligned}$ | $\begin{aligned} & \beta_{x}^{*}=80 \mathrm{~cm} \\ & \beta^{*}=7.2 \mathrm{~cm} \end{aligned}$ | $\begin{aligned} & \beta_{\mathrm{x}}^{*}=45 \mathrm{~cm} \\ & \beta^{*}{ }_{y}=5.6 \mathrm{~cm} \end{aligned}$ |
| ZDC | $\begin{aligned} & 0.6 \mathrm{~m} \times 0.6 \mathrm{~m} \times 2 \mathrm{~m} @ \\ & \mathrm{~s} \cong 30 \mathrm{~m} \\ & n: \pm 4 \mathrm{mrad} \end{aligned}$ |  | $0.6 \mathrm{~m} \times 0.6 \mathrm{mx}$ <br> $2 \mathrm{~m} @ \mathrm{~s} \cong 40 \mathrm{~m}$ <br> $n: \pm 4 \mathrm{mrad}$ |  |
| Roman Pots | $1-5 \mathrm{mrad}, @ \mathrm{~s} \cong 30 \mathrm{~m}$ |  | $0-5 \mathrm{mrad}$, @ $s \cong 30-45 m$ |  |
| Scattered particle acceptance | $\begin{aligned} & \mathrm{p}: 0.18 \mathrm{GeV} / \mathrm{c}<\mathrm{p}_{\mathrm{T}}< \\ & 1.3 \mathrm{GeV} / \mathrm{c} \end{aligned}$ |  | $\begin{aligned} & \mathrm{p}: 0 \mathrm{GeV} / \mathrm{c}<\mathrm{p}_{\mathrm{T}}< \\ & 1.3 \mathrm{GeV} / \mathrm{c} \end{aligned}$ |  |
| $\mathrm{Q}^{2}$ tagger |  | $\mathrm{Q}^{2}<0.1 \mathrm{GeV}$ |  |  |
| Crossing angle | 25 mrad |  | 35 mrad |  |

## Requirements/Constraints

- Fit into the existing RHIC IR8 experimental hall between ARC 7 and 9.
- Preference for a secondary focusis.
- Same accelerator equipment as in IR6 (spin rotators, snake and crab cavities).
- Second colliding IR and detector not in project, but the ability to have one is in the project scope.

## IR6 layout

- 25 mrad crossing angle

## IR8 full layout (colliding)

- 35 mrad crossing angle (driven by accelerator geometry).
- Second focus point at ${ }^{\sim} 47 \mathrm{~m}$.
- Space for similar accelerator equipment as IR6.

## IR8 near IR layout

- Space available for luminosity monitor, low Q2 tagger etc..
- All ancillary detectors in outgoing hadron beam side (Forward) integrated

## IR8 forward acceptance

- This is the previous design of the forward region with NbTi magnets
- Final focusing quads and the dipole placements was optimized for forward scattering neutron and proton acceptance.

Neutrons $\pm 5 \mathrm{mrad}$

Protons $\pm 5$ mrad
$x_{L}=1$
Protons $\pm 5 \mathrm{mrad}$
$x_{L}=0.5$

## Forward acceptance at 41 GeV

- Loss in acceptance without a corrector after B0

## 275 GeV with corrector

- A corrector was added between B0 and the first FFQ

Geant4 simulations by Alex Jentsch :
https://wiki.bnl.gov/eic-detector-2/images/8/86/IP8_HSR_lattice_performance_10_13_22_v3.pdf

## 41 GeV with corrector

Neutrons $\pm 5 \mathrm{mrad}$
Protons $\pm 5 \mathrm{mrad}$
$x_{L}=1$
Protons $\pm 5 \mathrm{mrad}$
$x_{L}=0.5$

## ID8 Seconc focus

Parameters at the $2^{\text {nd }}$ focus

| Parameter | Value | Units |
| :---: | :---: | :---: |
| $\beta_{x}$ | 0.498 | m |
| $D_{x}$ | 0.465 | m |
| $\epsilon_{x}$ | 11.3 | nm |
| $\sigma_{\delta}$ | $6.8 e^{-4}$ | - |

- Optimal $\beta_{x}^{2 n d}=\frac{L_{R P}}{2}$
- For the current design, $x_{L}<0.9930$
- $\operatorname{Max} x_{L}$ for the given momentum spread is 0.9932 (using $x_{L}<1-10 \sigma_{\delta}$ )

## Space constraints

Rear side hadron crab cavity (yellow) interference on the ESR (blue).

## Space constraints

## IR8 hadron optics

- Limited matching space requires some high gradient magnets (quadrupoles) than what is available from existing RHIC magnets.
- All new near IR magnets include 7 FFQs, 2 Dipoles, 1 corrector and BO.
- All magnets are assumed to be NbTi

| Type | RHIC | NEW | $?$ |
| :---: | :---: | :---: | :---: |
| Quad | 11 | 3 | 4 |
| Dipole | 5 | 0 | 1 |

Only showing the dipoles and quadrupoles. Other equipment such as crab cavities, spin rotators are not included here.

Forward

## IR8 electron optics <br> - Optics and design similar to IR6

## Summary $2^{\text {nd }}$ IR (IR8)

- Second colliding IR and detector not in project, but the ability to have one is in the project scope.
- There are many constraints for the IR8 design (particularly equipment, space and arc matching) that the $2^{\text {nd }} I R$ design must satisfy.
- The IR8 with the second focus adds complementarity to IR6.
- Work to be done includes,
- Crab cavity space requirement for the 35 mrad crossing angle.
- Clearance check for the RCS (Rapid Cycling Synchrotron) bypass.
- Account for luminosity sharing by moving the IP by 0.056 m away from IR6.
- Low energy lattices (41,100 for protons and 5,10 for electrons)
- Further study needed for the feasibility of the IR magnets.
- Nb3Sn magnets are being evaluated as an option.
- Chromaticity compensation with two IR's in the HSR.

## Thank you!
