

Far-Forward Meeting – 12/6/2022 – Minutes

- Discussed EPIC Collaboration meeting (<https://indico.bnl.gov/event/17621/>)
 - Far-Forward timeslot is 2pm on January 10th.
 - We have 4 speakers, so each speaker will have 12' + 3'.
 - Please have a close-to-final version of your slides sent around to the mailing list by January 3rd (one week before meeting).
- Simulations are ongoing, but exclusive events have not been processed. Alex will attend EICRecon meeting to discuss B0 tracking today (12/6/2022).
- Alex gave a presentation on the B0 EMCAL before the tracking system.
 - Results indicate this solution is not acceptable – too much impact on tracking performance.
- Wlodek asked about progress on the impedance studies, and commented that the option using accordion foils as shielding and to remove the cavity formed by the two Roman Pots stations needs to be evaluated for long-term use/fatigue.
