

# Status of INTT barrel

G. Nukazuka, J. Bertaux, R. Cecato, I. Nakagawa, R. Nouicer, and M. Shimomura

# Status

- Eventually, 16 ROCs were found to be in good condition. They will be installed in the IR.
- The final barrel tests with the Felix DAQ were finished.
  - The tests were done with a ROC and 7 ladders.
  - We obtained good calibration data from all half-ladders.
  - The map (from Felix's readout channel to the ROC port and the half-ladder) was determined. It's on [the sPHENIX wiki](#).
  - The half-barrels are ready to go. It's not determined when they are moved to the IR.
- Maya and Joseph made fiber connections between a Felix readout channel and a ROC port.

The calibration results of the last ladder (B0L108N)
