

# INTT Event Display

Takashi Hachiya  
Nara Women's University

# Status

- INTT Event display is useful to see the INTT activity during the commissioning and further
- INTT ED is under development using the simulation (p+p) data
  - Manami Fujiwara (NWU B4) is working on this
- Status
  - Basic functions are implemented
    - INTT geometry is taken from offline reconstruction code (not GEANT)
    - INTT clusters (reconstructed) is obtained in the offline data structure
  - Cluster positions are plotted on the wire frame of INTT geometry.
    - 3D model and 2D (beam view) are available
  - Can see the display event by event basis

# An example from p+p simulation

DrawHits()

DrawHit\_rphi()

# Summary and Next

- We would ask what kinds of functions are necessary
  - R-Z view ?
  - Display the hit position for single ladder ?
