

Calibration Monitor

INTT-Meeting

Apr./14/2023 Misaki Hata (NWU)

Calibration Monitor

- Calibration Monitor is what display results of calibration test about barrel ladders together. It makes easy to check the results.
- The results of 1/4barrel (28 half-ladders) can be displayed on each canvas.
- It takes 8 minutes to display results of all ladders. We are trying to make it display faster.
