Hi Itaru,

Yes, I can take over data transfer and production of TTree for INTT.

Right now I'm doing this for calorimeter-like subsystems (EMCal, HCals, MDB, ZDC) and we have a mattermost channel called Cmmissioning_Data_Production to coordinate the work.

Generally, users give me run numbers to process on this channel, and I do the rest.

So, if you post a list of run numbers on the channel and point me to a macro to run the production, I can add INTT to the list of subsystems to process.

Sasha.

We should hand Milan's automation scheme to Sasha and let them maintain.
