

ePIC Streaming Computing Model Working Group

Meeting - Aug 22, 2023

Short recap of what has been discussed so far

I) WG presentation: people, work plans, organization ...

ePIC Streaming Computing Model Working Group Kick-off meeting - July 11, 2023

Infrastructure

- **Streaming Computing Model** (Marco Battaglieri, Jin Huang, Jeff Landgraf (interim)):
 - **Charge:** Development of the computing model for the compute-detector integration using streaming readout, AI/ML, and multi-architecture computing (CPU, GPU, ...) with a specific focus on the data flows after the FEE layer.
 - **Priorities for 2023:**
 - Establish a collaborative dialogue with the Electronics and DAQ WG:
 - Define the requirements and high-level design for a computing model that enables rapid processing for the data for physics analyses, while leveraging external compute resources, including those provided by international partners.
 - Coordinate activities on prototyping streaming computing systems, together with the Physics and Detector Simulation and Reconstruction Framework and Algorithms WGs.
 - Document a streaming computing model that can be redefined further with international partners.

Work plan:

- Define a draft of SRO Computing Model by end of September
- Discuss it during the fall
- Present the ePIC Computing Model at the EIC Resource Review Board meeting scheduled for December 7 and 8 2023

Work Group organization:

- Two meetings before EICUG/ePIC meeting in Warsaw meeting (July 11 and 18)
- Bi-weekly meetings starting from August with contributions from experts (general, EIC, BNL, JLab and foreign institutions CERN, FAIR, KEK, ...) and other ePICs WG (DAQ, SW, Physics, ...)
- From september focus the discussion on ePIC SERO computing model

Regular weekly meeting on Tuesday at 9:00 AM EDT

ePIC Streaming Computing Model Working Group

Meeting - Aug 22, 2023

II) Computing model for HEP/NP physics

ePIC Streaming Computing Model WG Meeting

Tuesday 11 Jul 2023, 09:00 → 10:30 US/Eastern

Jeff Landgraf (Brookhaven National Laboratory) , Jin Huang (Brookhaven National Lab) , Marco Battaglieri (Jefferson Lab)

Description

We will use Zoom for the remote meeting:

- <https://jlab-org.zoomgov.com/j/1614875218?pwd=RFRPcGINM3BaS0pQaDhxS3JURkdJZz09>
- Meeting ID: 1614875218
- Password: 925723

Live Notes

09:00 → 09:30 Organization

09:00

10:00

Discussion

30m

- Real-time data processing is a general issue/opportunity (with commercial/custom solutions already available!)
- SRO is an opportunity to simplify data acquisition
- Need of flexibility to cope with technology evolution
- Every DAQ is a streaming system!
- Should SRO include high-level analysis too or just stop at data collection?
- Row data and 'events': where to place the separation line? physics?

What is this talk about?

- This is not a proposal for a computing model for ePIC. It is a short look at:
 - What streaming data is in the broadest sense
 - The opportunities and challenges for processing such data
- Outline
 - Definition of streaming data
 - The current dominant data processing model
 - The need for a new approach
 - Data Streaming as a disruptive model
 - Science use cases
 - Computing models
 - Hardware architectures
 - Data steering
 - Summary

Meeting - Aug 22, 2023

III) Computing model for ePIC

ePIC Streaming Computing Model WG Meeting

Tuesday 18 Jul 2023, 09:00 → 10:40 US/Eastern

Jeff Landgraf (Brookhaven National Laboratory), Jin Huang (Brookhaven National Lab), Marco Battaglieri (Jefferson Lab)

Description

We will use **Zoom** for the remote meeting:

https://lab-org.zoomgov.com/j/1614875218?pwd=RFRPcGINM3BaS0pQaDhxS3JURkdJZz09

Google Slides

10:10

Discussion

INFN (@CERN) Perspective

- Structured in TIERS (TIER0@CERN)
- Several Tier2 distributed in various locations + TIER I (ICSC)
- LHC-HL specs: 350 PB/y (raw data); ~400+100 Gbps to Tier I s (quasi-real time)
- T1 to T2 probably by tapes

Computing model for EIC

- Experience gained with ECCE,ATHENA and the EIC YR
- Butterfly model

The diagram illustrates the 'Butterfly Model for Distributed Computing' for the EIC experiment. It shows a hierarchical structure with three echelons:

- Echelon 0:** The EIC Experiment, represented by a central box.
- Echelon 1 (host labs):** BNL and Jefferson Lab, shown in red boxes. A note states: 'Nearly all storage (raw data, reconstructed data, simulated data) is stored across Echelon 1 sites.'
- Echelon 2:** Facility A, Facility B, and Facility C, shown in grey boxes.
- Echelon 3:** Multiple University nodes, shown in grey boxes, connected to the Echelon 1 sites.

The diagram also indicates 'domestic + international' participation for Echelons 2 and 3. Logos for ePIC, EPSCI, and Jefferson Lab are present. Footer text includes: 'Kickstarting the ePIC Computing Plan : 2023-07-18 : D. Lawrence : ePIC SRO WG Meeting' and a page number '4'.

09:00 → 09:30	Status and Plans	
09:00	Recap July 11 and 18 Meetings Speaker: Marco Battaglieri (Jefferson Lab)	🕒 15m
09:15	Discussion	🕒 15m
09:30 → 10:00	Echelon 0	
09:30	Requirements from the Streaming DAQ on the Computing Model (Event Rates, Data Sizes, ...) Speaker: Jeff Landgraf (Brookhaven National Laboratory) 	🕒 20m
09:50	Discussion	🕒 10m
10:00 → 10:30	Use Cases and Workflows	
10:00	Data productions, Simulation Campaign, and Physics Analysis Needs Speaker: Dr Markus Diefenthaler (Jefferson Lab)	🕒 15m
10:15	Discussion	🕒 15m

Before October 19-20 review:

- Use cases and workflows (reconstruction, storage, distribution, simulations, high-level analysis and role of Echelon-X): requirements from Physics VVGs
- Alignment and calibrations and near real-time data processing
- ... more in next Tuesday's meetings!

Short recap of what has been disc used so far

- General talk about computing models (not only for hep/np physics) (Graham)
- Real-time data processing is a general issue (with commercial/custom solutions already available!) (Graham)
- SRO is an opportunity to simplify data acquisition (Graham)
- Flexibility to cope with technology evolution (Graham)
- Butterfly model: detector computing hand in hand (Markus D)
- Every DAQ is a streaming system! (Jeff)
- The computing model affects the role of international partners (Pietro A)
- Streaming as a model for the whole analysis pipeline? (Pietro)
- SRO to speed up physics analysis (Markus D)
- The connection between Physics WGs and Computing Models needs to be tightened (Markus)

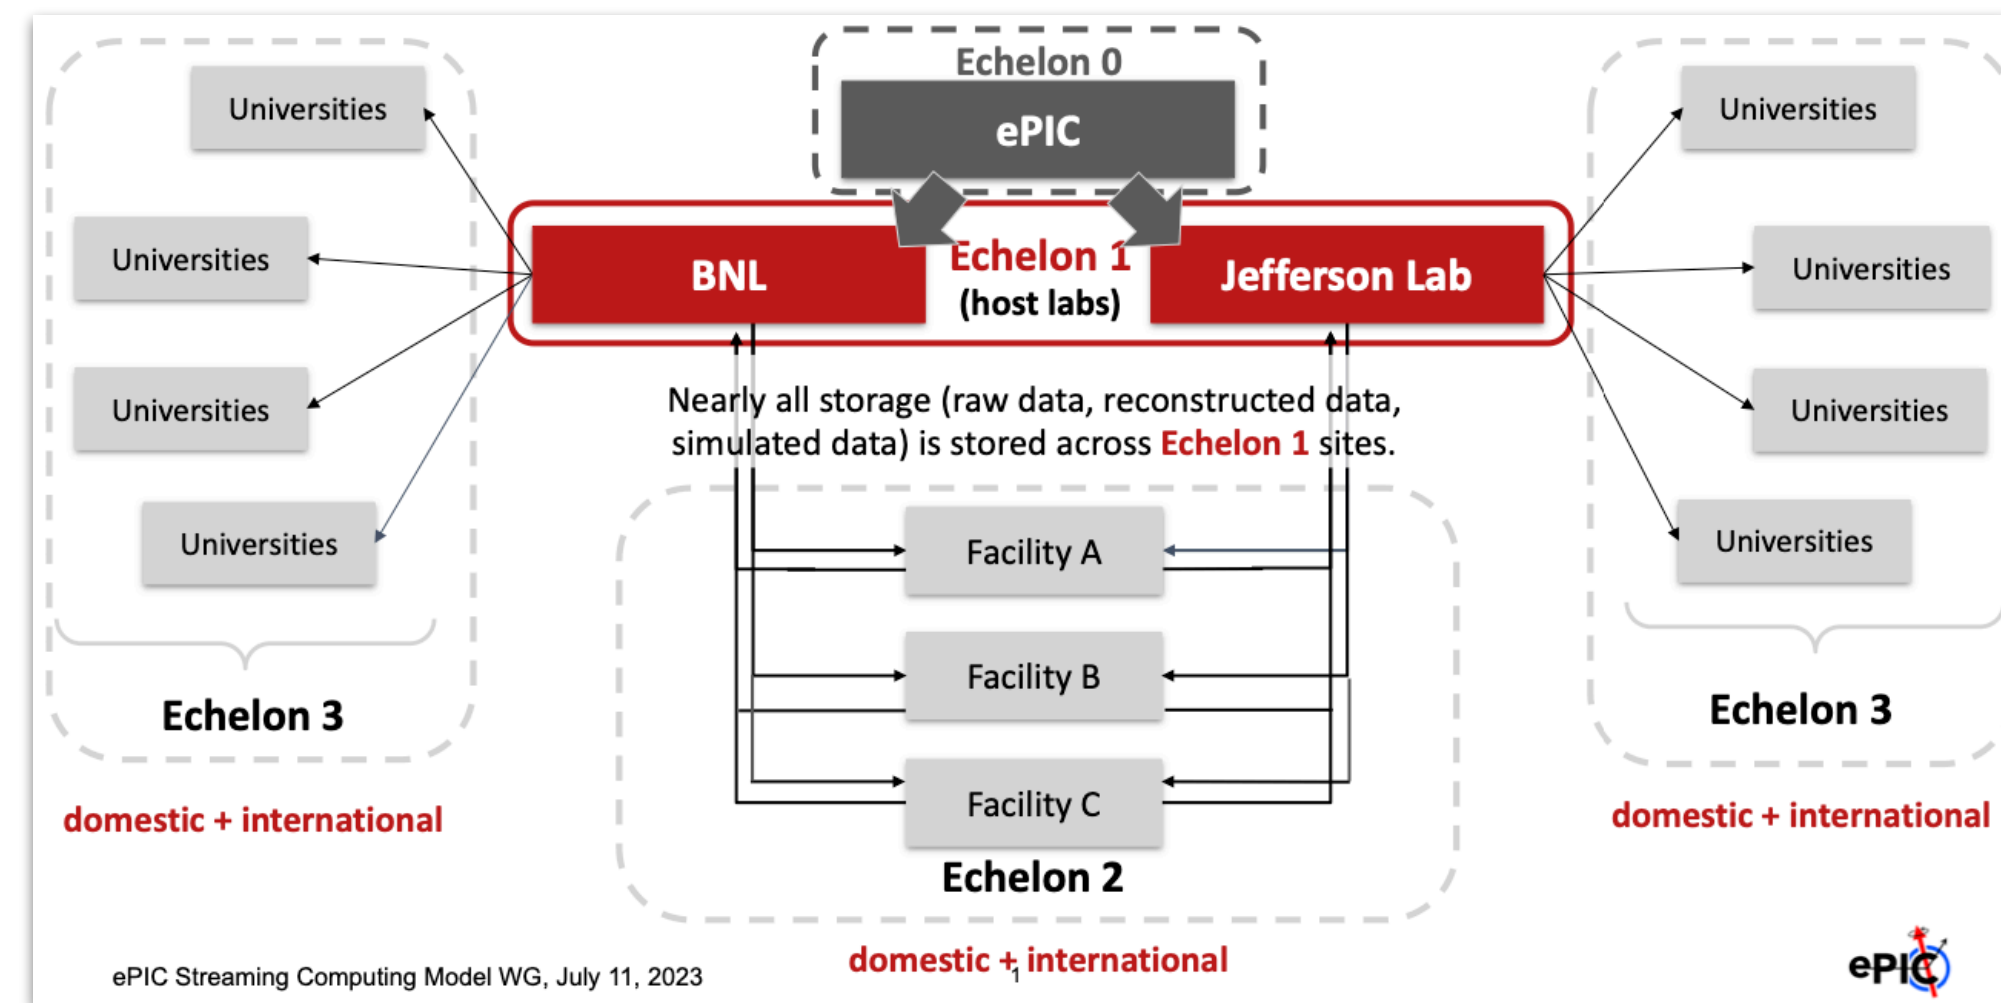

What is this talk about?

- This is not a proposal for a computing model for ePIC. It is a short look at:
 - What streaming data is in the broadest sense
 - The opportunities and challenges for processing such data
- Outline
 - Definition of streaming data
 - The current dominant data processing model
 - The need for a new approach
 - Data Streaming as a disruptive model
 - Science use cases
 - Computing models
 - Hardware architectures
 - Data steering
 - Summary
