Flush report

Wei-Che Tang, NCU

Plan for INTT workshop

- **Goals for the workshop:** Fine tune the stability monitor, cosmic data analysis toward the INTT efficiency study

- **To do:**

  - **Stability monitor**

    - ~~Make shell script that mesh every part of process together~~

    - Make a batch job system for processing many runs

    - Make some real plots in Grafana (i.e. hit numbers for inner & outer layer)

    - Documentation

  - **Check the cosmic data:**

    - Cosmic track angle distribution

    - Cluster ADC vs angle correlation

    - Track fitting quality distribution

Status

- The shell script for running the PSQL database is done.

  - Send information txt file from SDCC to inttdaq -> Run the script to insert the information to database -> Show the information on Grafana

- Jaein's request: to have the hits/event from run to run

- I already have the information of hits/event as a txt file, but…
