Dear all,

Here are the minutes from today's meeting.

----

o Crone event <Cheng-Wei>

– Crone events are not found in zero field Run23 data.

o Software <Takashi>

– **Takashi** will check the dead channel map if it is causing a trouble in new production.

o INTT Geant Model <Genki>

– **Hao-Ren** and **Joseph** will implement half barrel frame into GEANT as the short term solution avoiding full implementation.

– **Rachid** will ask volunteer outside from INTT team to implement any materials outside the acceptance in the operation meeting.

o Dependence of bias voltage on MIP signal amplitude <Takahiro>

– No difference in the depletion region was observed between bias voltage of 50 and 100V.

o Dead/hot channel map implementation <Joseph>

– Joseph completed dead/hot channel map into the decorder. **Joe** will test the hot channel mask results Joseph produced.

– Same dead/hot channel modules are to be developed and employed for data and MC, replacing the existing one which forces different modules between data and MC.

o hot channel map for cosmic runs <Wei-Che>

– **Wei-Che** prepares tight and loose hot channel maps.

Regards,

–itaru
