

Dear all,

Here are the minutes from today's option.

---

o Channel Mapping Issue in the new Production <Takashi>

- Found the "zero" origin location of the ladders in the barrel in the new production. **Takashi** will commit right after the meeting.
- **Takashi** will post the online-offline channel conversion map and the numbering convention on the INTT wiki.

o dN/deta analysis <Cheng-Wei>

- **Jaein** provide zero field run's TTree to Joseph today or tomorrow. **Joseph** develops conversion module Jaein's TTree output format to CDB.
- Cheng-Wei estimated the fraction of 5% of total events falls into  $-10 < z_{\text{vertex}} < 0$  cm. Yasuyuki advices to focus in  $-10 < z_{\text{vertex}} < 0$  cm data for dN/deta analysis so that the uncertainty comes from MC reliability becomes minimal.
- **Cheng-Wei** should prepare work flow to visualize the analysis plan and schedule.
- **Takashi** will implement DAC values into CDB by the end of this month. To be discussed tasks and person in charge in the next dN/deta meeting.

o ROC installation update <Genki>

- Waiting for green light. While waiting, work on the calibration data taking today.

o MBD-INTT Synchronization <Maya>

- No official module exists to synchronize data for Run23. Our semi-automated private module will be official. There will be an official module to be developed by Chris for Run24.
- MBD group is looking into the issue for smaller multiplicity only for zero field runs.

o SQM Conference <Jaein>

- **Jaein** will inform psb that Jaein is applying for a poster in SQM, then send out the abstract draft to INTT mailing list then submit to the conference.

Best regards,

-itaru
