

ePIC Barrel Imaging Calorimeter (BIC) Workshop

May 14 -17,2024

BIC Reconstruction Studies

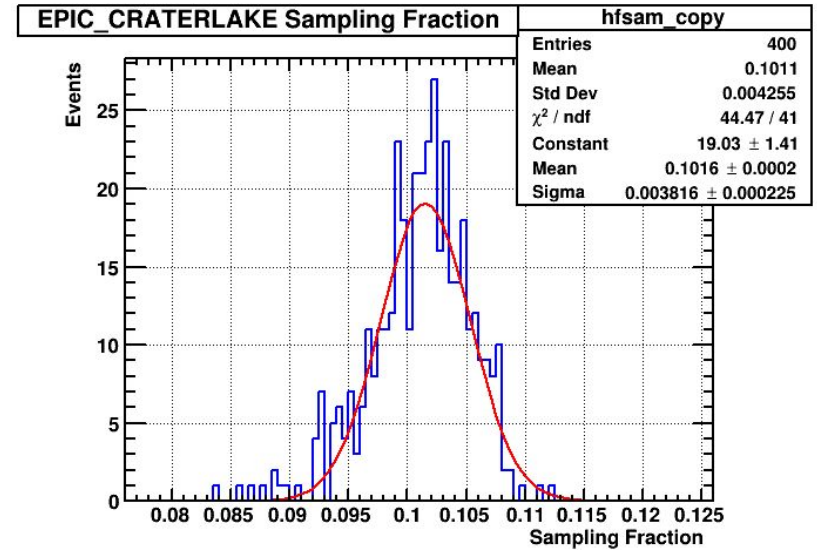

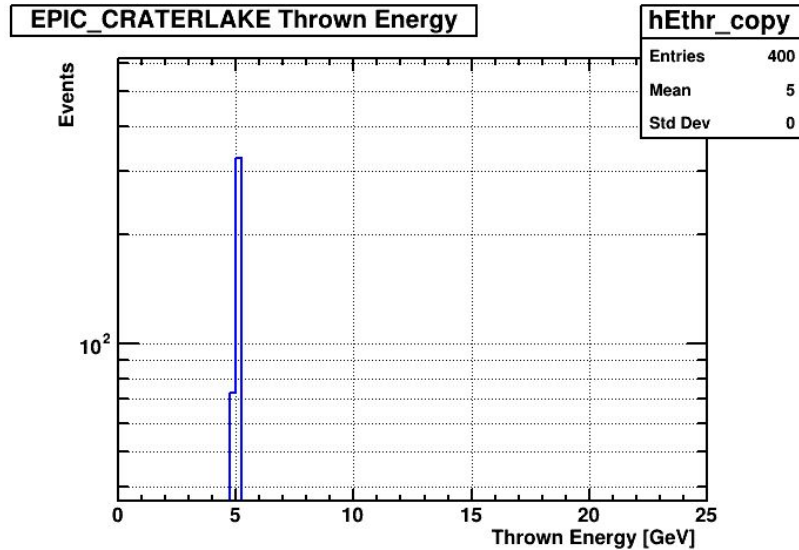

Akshaya Vijay

Advisor: Dr. Wouter Deconinck

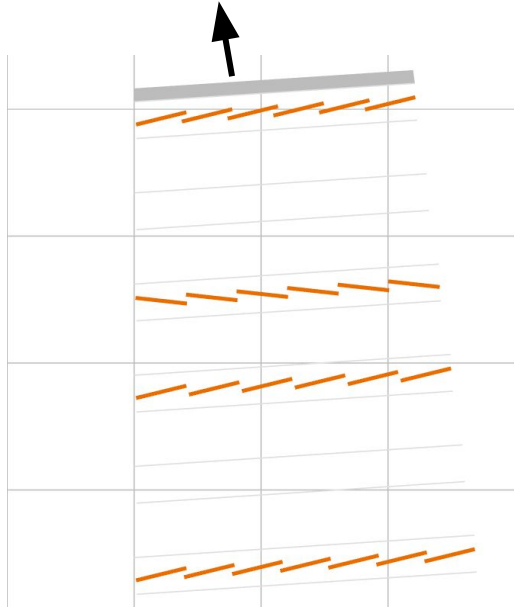

Sampling Fraction of ePIC-Craterlake

✓ Performed simulations to calculate the Sampling fraction.

Geometry Updates

Front Support Thickness 0.5*cm

Back Support Thickness =3cm

DIRC_thickness = 3.1*cm
Position of the rail, $x=20\text{mm}$; $y=0$; $z=0$

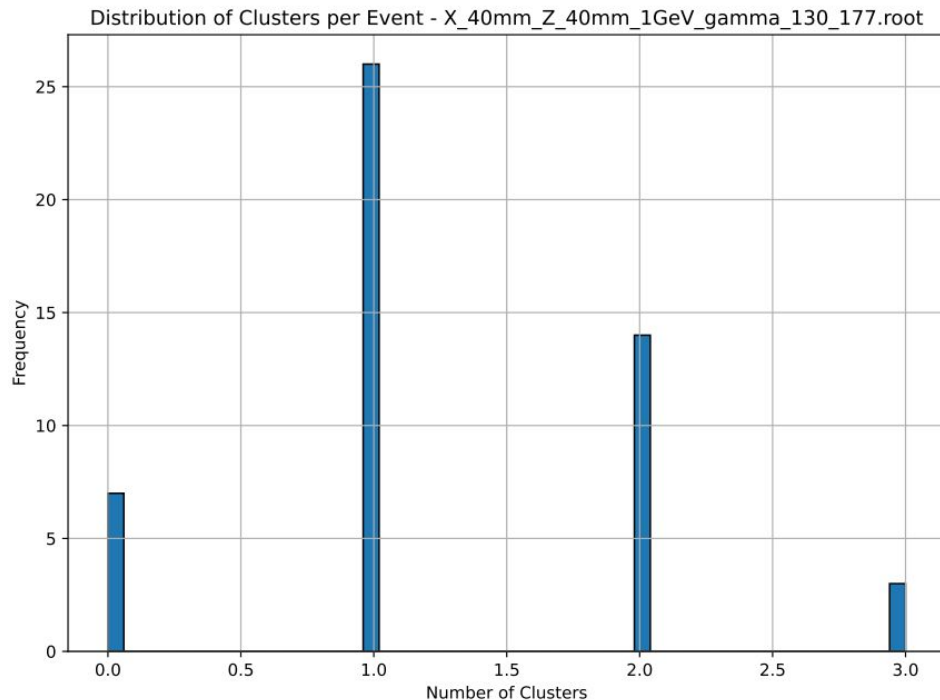

Excessive cluster splitting at high pseudorapidity in EcalBarrelScFi

Simulation info:

```
SIM.gun.etaMin = -2  
SIM.gun.etaMax = -0.8  
SIM.gun.distribution = "cos(theta)"  
SIM.gun.energy = 1*GeV  
SIM.gun.particle = "gamma"  
SIM.gun.phiMin = 130*deg  
SIM.gun.phiMax = 177*deg
```

Clustering Parameters:

```
.sectorDist = 50. * dd4hep::mm,  
.localDistXZ = {40 * dd4hep::mm, 40 * dd4hep::mm},  
.splitCluster = false,  
.minClusterHitEdep = 5.0 * dd4hep::MeV,  
.minClusterCenterEdep = 100.0 * dd4hep::MeV,
```

Excessive cluster splitting at high pseudorapidity in EcalBarrelScFi

Simulation info:

.sectorDist = 50. * dd4hep::mm,  
.localDistXZ = {40 * dd4hep::mm, 40 * dd4hep::mm},  
.splitCluster = false,  
.minClusterHitEdep = 5.0 * dd4hep::MeV,  
.minClusterCenterEdep = 100.0 * dd4hep::MeV,
```

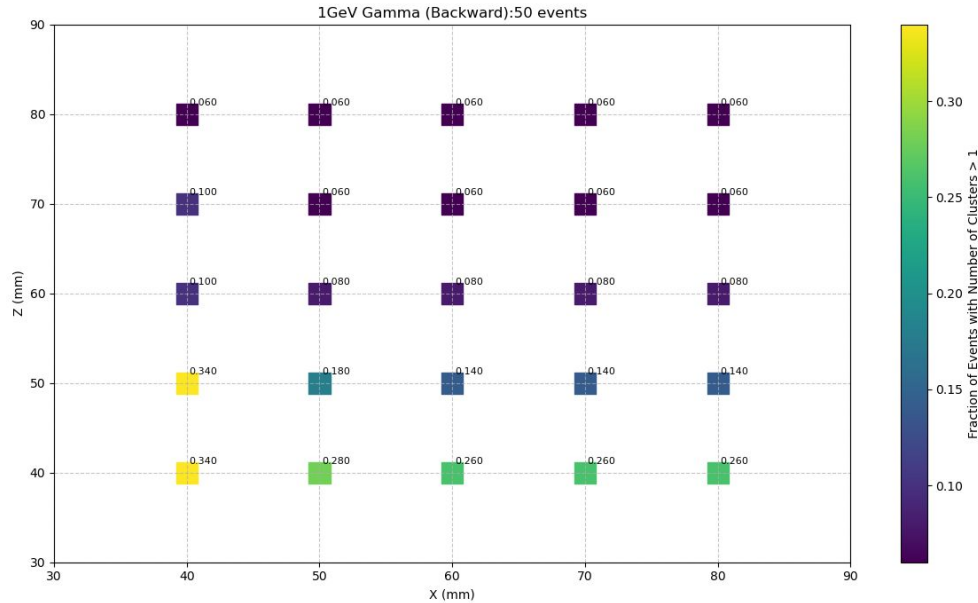

Checked for cluster splitting for a different value of localDistXZ parameter

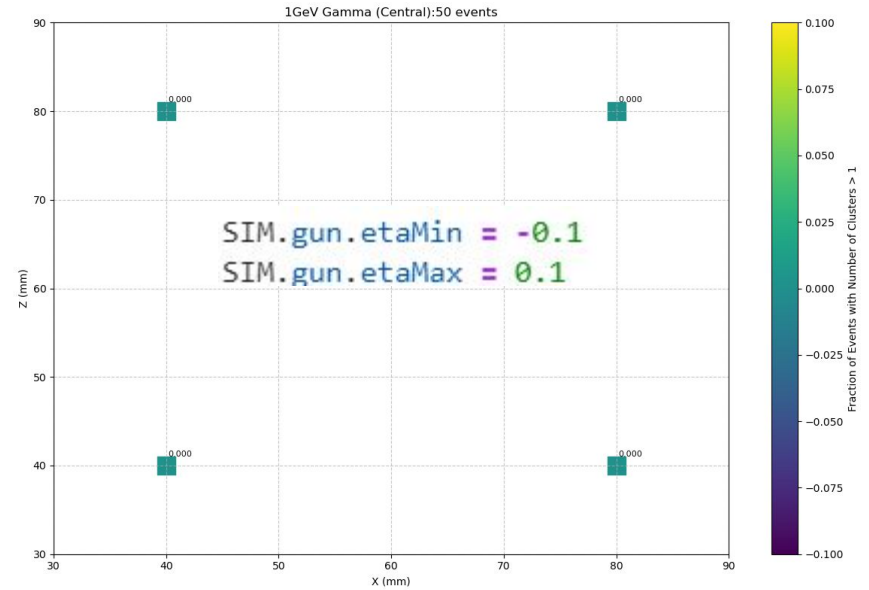

Cluster distribution per event before and after the parameter change

Checked for cluster splitting for different values of localDistXZ parameter for pseudorapidity at backward region

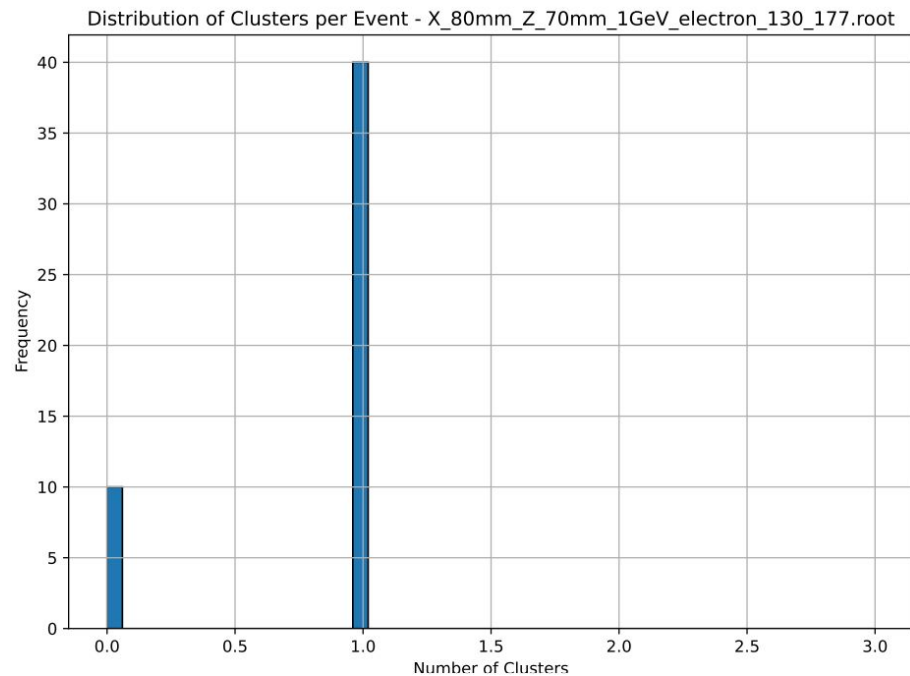

Checked for cluster splitting for different values of localDistXZ parameter for pseudorapidity at forward and central region

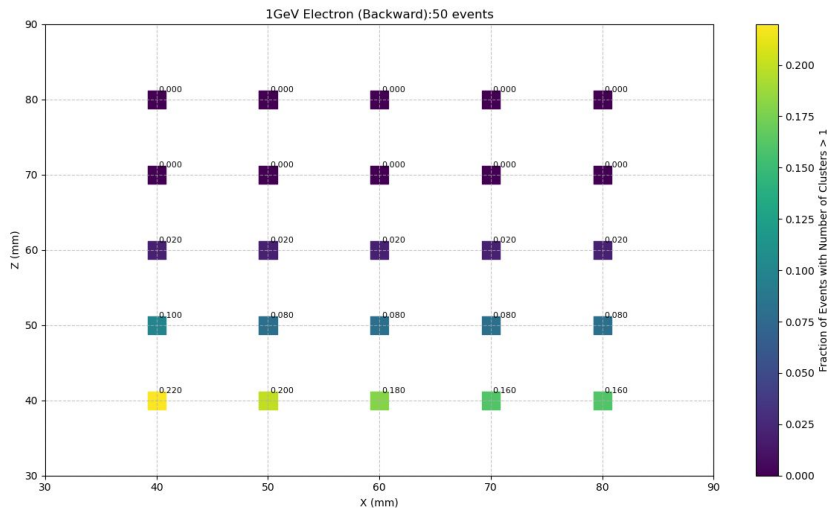

Repeated to 1GeV Electron

Cluster distribution per event before and after the parameter change

Checked for cluster splitting for different values of localDistXZ parameter for pseudorapidity at forward and central region for 1GeV Electron

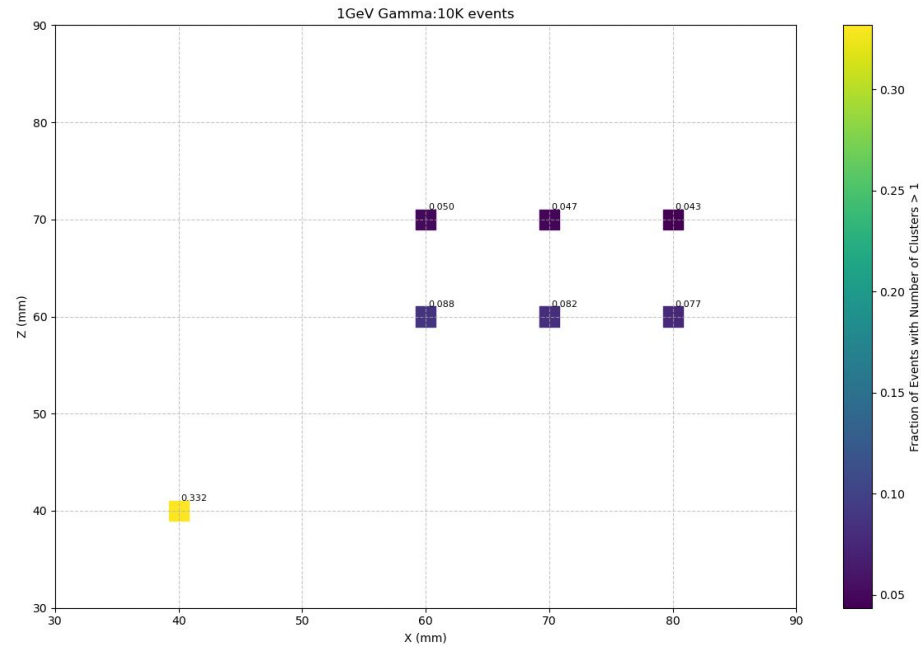

Next Steps...

- Repeat the cluster splitting simulations for larger number of events
(Completed the simulations for the pseudorapidity at the backward region and need to repeat for central and forward region)
- Find the PID of the particle forming multiple clusters and include it in the event display.
- Start to work towards the Pb/ScFi module model construction in summer at UofM

Thank you for Listening...

Back up

cluster splitting for different values of localDistXZ parameter for 10K events for pseudorapidity at backward region
