

Dear all,

Here is the minutes from today's meeting.

o Software update <Takashi>

- We better optimize the number of events to be processed to have reliable hot/dead channel map which is applicable to p+p as well as Au+Au. The present 10k may not be sufficient for p+p. We better be prepared for the scenario to extract from Run24 Au+Au.
- Even the macro is private, but as long as data is produced from Fun4All.

o Detector status <Rachid>

- Rachid confirmed with survey crews and checked the OGP machine that the reference point was front (inner hole) of the PEEK.
- **Cheng-Wei** send the dimension to Dan cross check each other. **Cheng-Wei** will implement numbers in the slide regarding the definition of survey later and **Joseph** will write the clear analysis note within a month.
- **Rachid** will ask John K. to double check if 300mV difference in the grounding between INTT and EMCAL will be disappeared when laser is turned off.
- Jaein took a look cosmic data from two weeks ago and found cosmic tracks from INTT based on the ideal geometry. **Jaein** dresses up (x-axis, y-axis, run number, date) the plots and provide it to **Joseph** so that he can report in the shift change meeting.
- **Joseph** provide good run number to Jaein so that he can do the health check.
- If possible, **Jaein** checks the z-plane track as well.
- **Genki** will implement automated cosmic tracking program.

Regards,
