

# Oct 8, 2024 STAR summery of past week

*Prithwish Tribedy, Brookhaven National Lab*

All subsystems working smoothly

Over the past week:

1. Cosmic during the downtime, physics onwards
2. Trigger setup, calibration done, forward trackers are turned on, running smoothly
3. Continued taking physics (120 M minbias events so far), below our max rate (4K)
4. Use 6x6 fill for TPC space charge, plans for single beam (background studies/beam-gas)
