

Summary of INTT status

- 1008 INTT Members:
 - Rachid, Raul, Itaru, Genki, Takashi, Akitomo, Jeain, Hinako
 - Joseph, Tomoya, Mahiro came to lab yesterday.
- Basically, INTT is participated in the Big-partition when we are not taking our own special data.
- Sometimes, we lose online plots, which is probably caused by Online plot server itself.
 - Even if we don't see online plots, we can see data offline
- We tested our timing scan procedure using 28x28 fill, but it was not successful due to some instability of GTM synchronization.
- Now Raul is debugging instability, which sometimes lost the synchronization, or no data from some Felix channel.
 - After fixing the issue, we will request 56x56 bunch fill for the timing scan
- DAC0 scan and DAC scan data has been taken and we will do more DAC0 and DAC scan, if necessary, after finishing the timing scan.
 - Wei-Chie is working on to analyze DAC0 scan data
 - Who is going to analyze DAC scan data?
