

Exclusive, Diffractive, Tagging WG

Single Meeting

- June 10 : update by L. Preet on meson form factors
- We have only few contributions in this Summer period
 - **Cancelled several meetings**

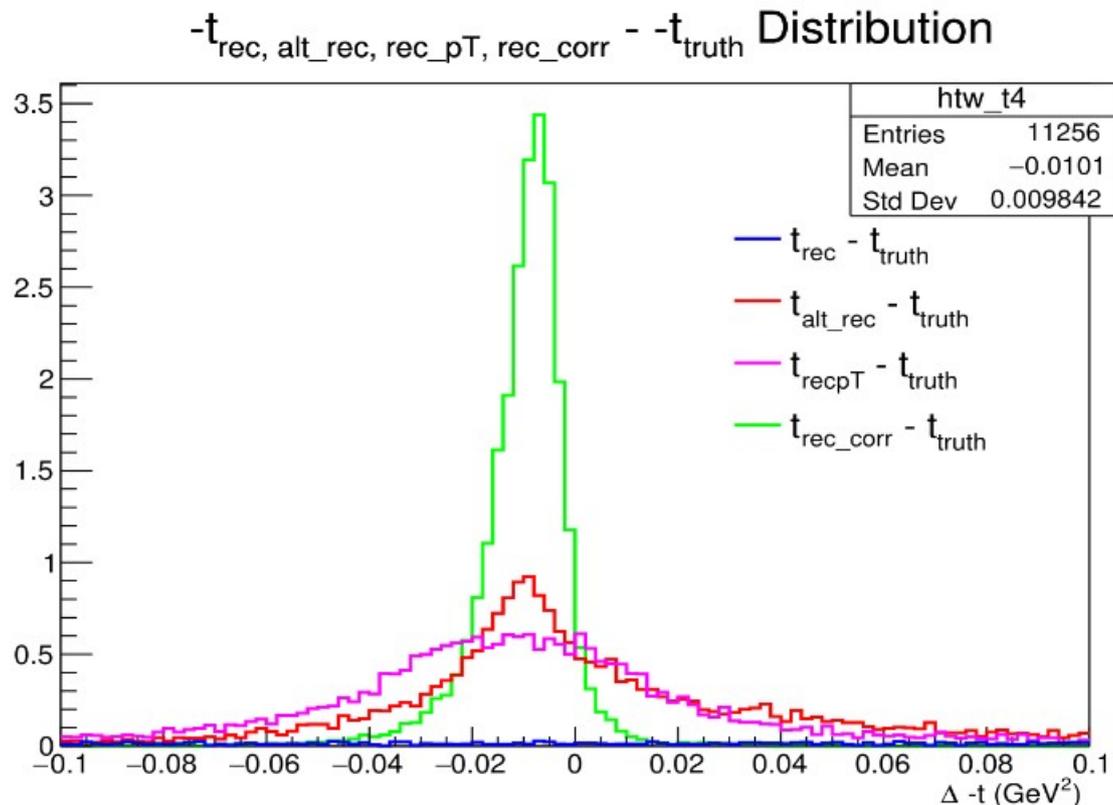

Some work advance on DVCS (O. Jevons)

- Small work meetings on DVCS and π^0
 - **Work is progressing, but still not at the level to TDR plot**
- Identified a person for neutron DVCS analysis

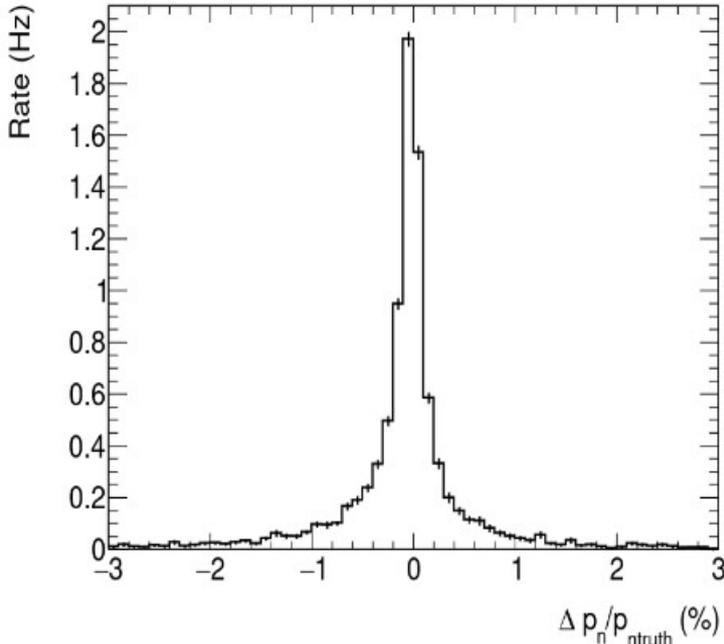

Comparison of $\Delta -t$ from various methods

- All methods reconstruct $-t$ slightly shifted from true $-t$, which would need to be understood and corrected for in the actual physics analysis.

Neutron track momentum resolution

For 5(e) on 100(p) GeV collisions from ECCE simulations.

For 5(e) on 41(p) GeV collisions from ePIC simulations.
