|ReconstructedSeededChargedParticles.momentum|

|ReconstructedChargedParticles.momentum|

- ❑ Single particle: π^-
- ❑ Overall increase in momentum resolution

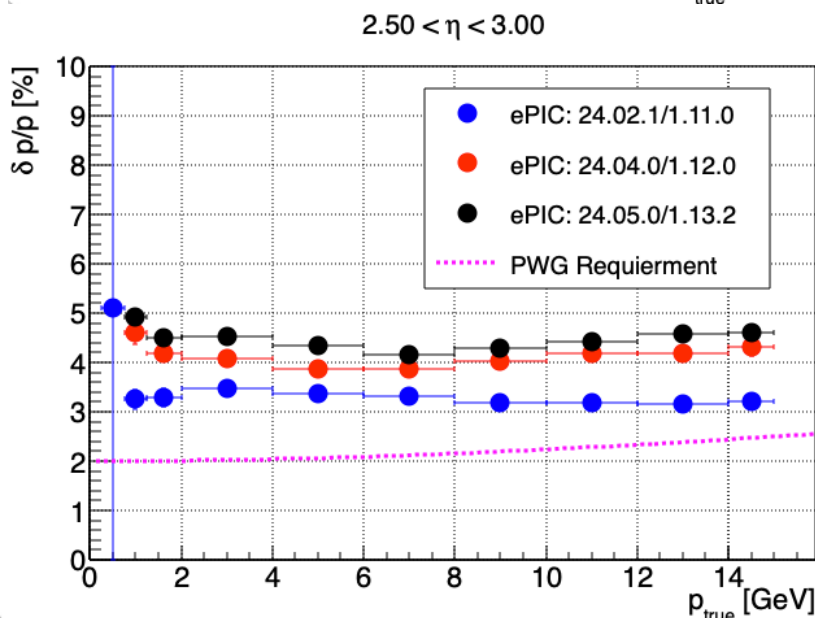

□ Single particle: π^-

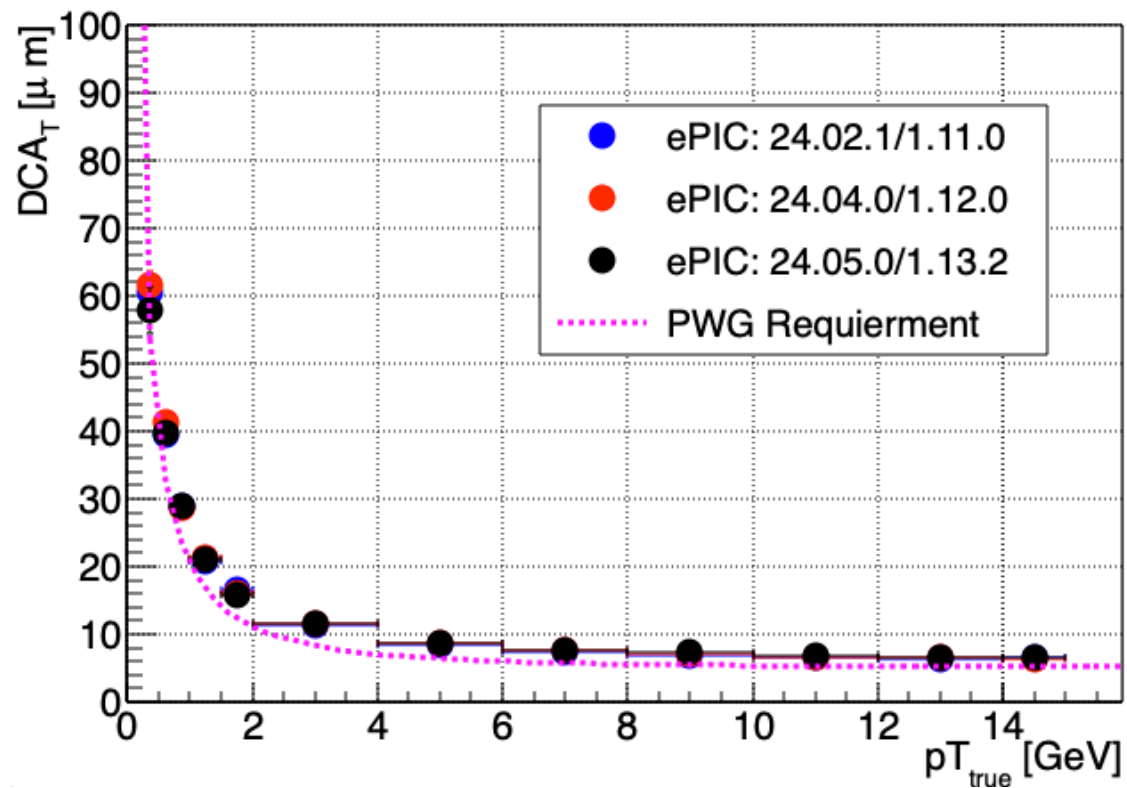

Momentum Resolution: $|\eta| > 2.5$

□ Single particle: π^-

- ❑ Single particle: π^-
- ❑ DCA resolutions are comparable

$0.00 < \eta < 0.50$

$0.50 < \eta < 1.00$

□ Single particle: π^-

- ❑ Comparison of Crater Lake Tracking

- Materials
- Performance

- ❑ Angular Resolutions at PID Surfaces:

- pfRICH
- DIRC
- dRICH

DD4hep Reference Surface:

- Used to register truth hit
- Low mass $X/X_0 \sim 0.01\%$
- Outside tracking volume

Reference Surface Locations

- pfRICH $Z = -123.5$ cm
- DIRC $R = 75.5$ cm
- dRICH $Z = 200$ cm

- Angular resolutions assessed via difference between **track propagated** to PID location and **closest hit** on dd4hep reference surface

PID reference surfaces

- ❑ ePIC 24.04.0, EICrecon v1.12.0/v1.13.1
- ❑ Single particle: π^-
- ❑ $0^\circ \leq \phi \leq 360^\circ$
- ❑ 2° θ -bins
- ❑ Discrete momentum values

pfRICH Example: $p = 2\text{GeV}, 152^\circ \leq \theta \leq 154^\circ$

Representative pfRICH example

- $p = 2 \text{ GeV}$
- $172^\circ < \theta < 174^\circ$
- $\Delta\eta \sim 0.01$
- $\Delta\theta \sim 1.0 \text{ mrad}$
- $\Delta\phi \sim 8.3 \text{ mrad}$

- ❑ Comparison of Crater Lake Tracking

- Materials
- Performance

- ❑ Angular Resolutions at PID Surfaces:

- pfRICH
- DIRC
- dRICH

- ❑ Azimuthal resolution worst than polar angle resolution
- ❑ Good agreement between truth and realistic seeded results

Fit Function: $\sqrt{\frac{A^2}{p[\text{GeV}]^2} + B^2}$

172 <math>\theta < 174</math>, $\langle \eta \rangle = -2.80$

172 <math>\theta < 174</math>, $\langle \eta \rangle = -2.80$

Parameterization Results Summary

- Used in pFRICH PID Look up tables

(extended vertical range)

- ❑ Comparison of Crater Lake Tracking

- Materials
- Performance

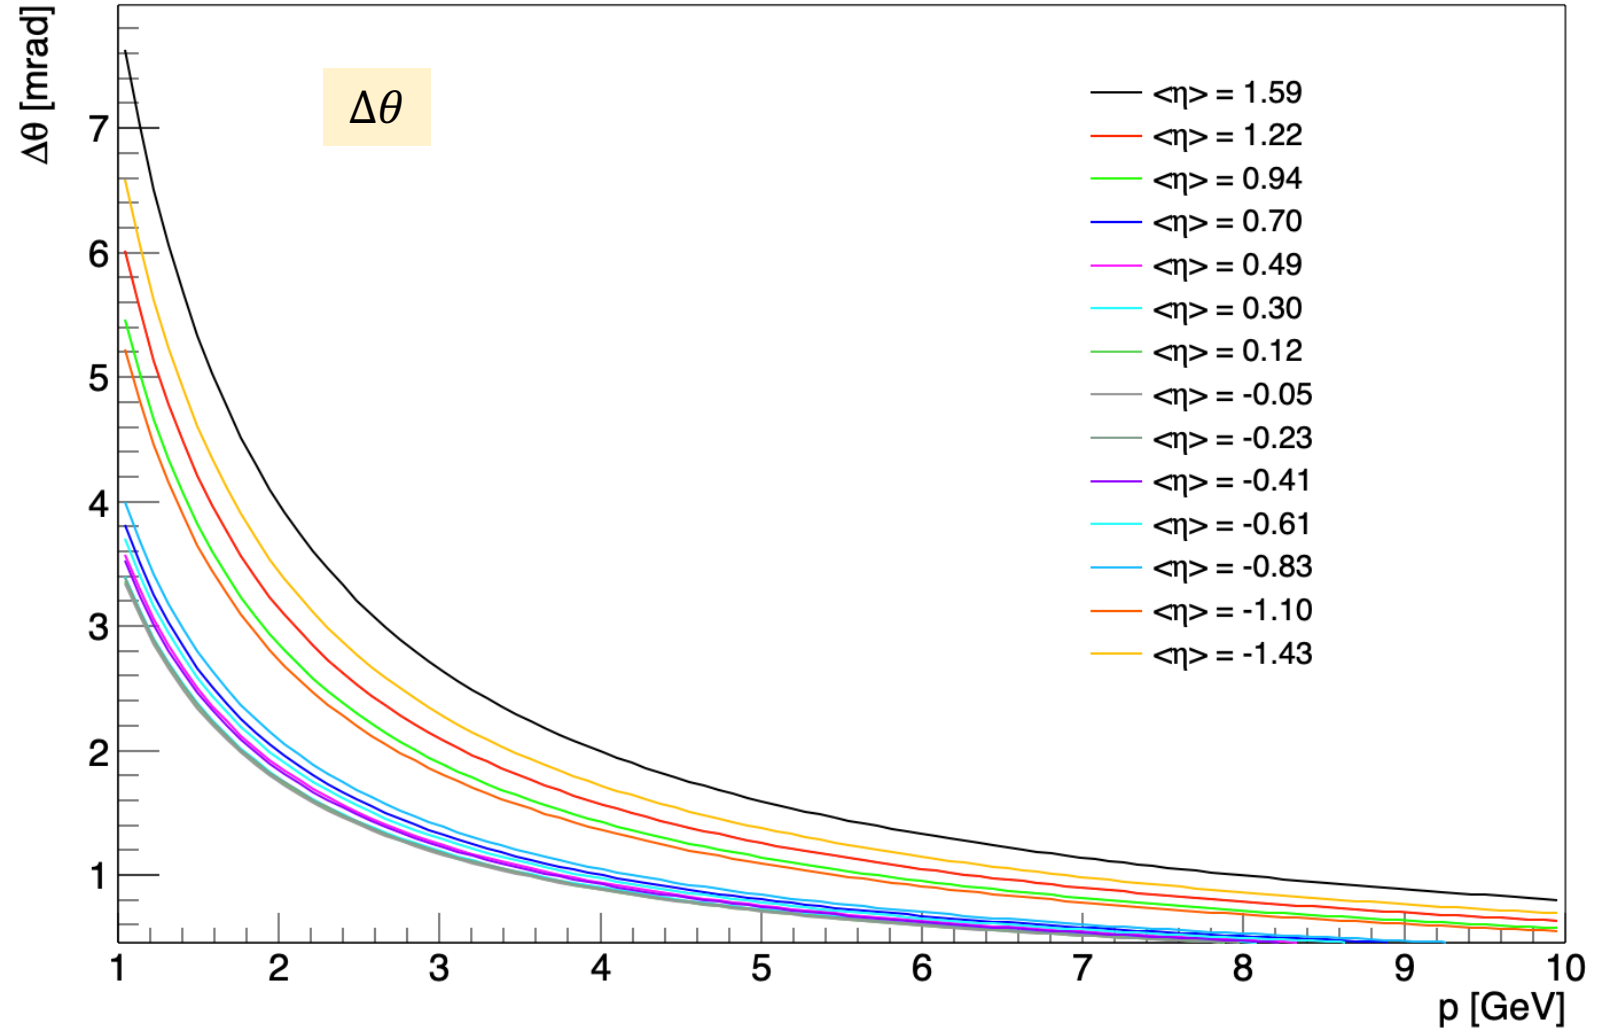

- ❑ Angular Resolutions at PID Surfaces:

- pfRICH
- **DIRC**
- dRICH

Fit Function: $\sqrt{\frac{A^2}{p[\text{GeV}]^2} + B^2}$

- ❑ Parameterization Results Summary
- ❑ Two general groupings
 - Outer grouping: $|\eta| > \sim 0.9$
 - Inner grouping: $|\eta| < \sim 0.9$
- ❑ DIRC PID look up tables assume $\Delta\theta = 0.5 \text{ mrad}$

- ❑ Miss DIRC requirement of 0.5 mrad
- ❑ Best resolution ~ 0.6 mrad

Parameterization Results Summary

- ❑ Comparison of Crater Lake Tracking

- Materials
- Performance

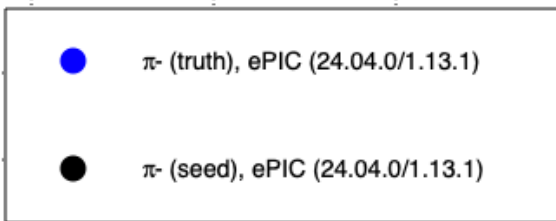

- ❑ Angular Resolutions at PID Surfaces:

- pfRICH
- DIRC
- dRICH

Fit Function: $\sqrt{\frac{A^2}{p[\text{GeV}]^2} + B^2}$

$13 < \theta < 15, \langle \eta \rangle = 2.10$

χ^2 / ndf	245.3 / 3
A	2.912 ± 0.007557
B	-0.04886 ± 0.008556

$13 < \theta < 15, \langle \eta \rangle = 2.10$

χ^2 / ndf	8.973 / 3
A	10.51 ± 0.07871
B	-0.4355 ± 0.02596

Parameterization Results Summary

- ❑ Impact of additional materials evident in tracking performances
 - Worsening of performance with increasing material budgets
- ❑ Assessed angular resolutions at PID entrances for pFRICH, DIRC, and dRICH
 - Better estimates using information more local to PID detectors (e.g. avoid large extrapolation)?
 - Impact of BIC ?

□ Single particle: π^-

□ Single particle: π^-

Momentum Resolution: Backward

□ Single particle: π^-

□ Single particle: π^-

□ Single particle: π^-

□ Single particle: π^-
