Software and Simulations for (pre)TDR: Open Tasks

That are not part of July release.

Development

- **Data Model**:
  - Please provide comments on <u>MC Truth Associations Policy</u>.

- **Physics and Detector Simulations**:
  - Review the status of timeframes and provide a roadmap for further development of timeframes and timing information in simulations.
  - Proposal: Joint meeting with Streaming Computing (and/or Electronics and DAQ)? Maybe July 2?

- **Reconstruction Framework and Algorithms**:
  - Review the streaming reconstruction prototype to determine if it is sufficient for estimating our compute resources.

Development and Operations

- Document requirements for ML integration.

Operations

- **Production**:
  - Document physics processes and related MC samples, jointly with PWGs.
    - Including versioning of MCEG configuration.

Other

- DAP for TDR.
