

Validation WG: Updates

September 4th, 2024

Updates

- Merged backwards_ecal benchmark
- Some issues with files seemingly disappearing from /scratch/ on eicweb, make simulation re-run from scratch on analysis stage -> timeouts
- epic-capybara crashes with Range1d
- Need a new time for the meeting

Writing benchmark artifacts to XRootD

- htgettoken is available in the container, and is able to retrieve the token (executed from SDCC)
- Actual xrdfs/xrdcp operations on xroots://dtn2201.jlab.org fail with “[FATAL] Auth failed”
- Copying same token back to JLab system, it works
- Setting BEARER_TOKEN_FILE doesn't work

image_browser

Was able to get some functionality working
except for generate_sidebar.php

Also image_crawler.py needs to use some industry-standard mysql library
