

Test Beam Prototype Simulations

Artur Hoghmrtsyan

https://github.com/eic/epic/tree/main/build/epic_eeemcal_only.xml

Includes:

https://github.com/eic/epic/tree/main/compact/ecal/backward_PbWO4.xml

Created by:

https://github.com/eic/epic/blob/main/src/HomogeneousCalorimeter_geo.cpp

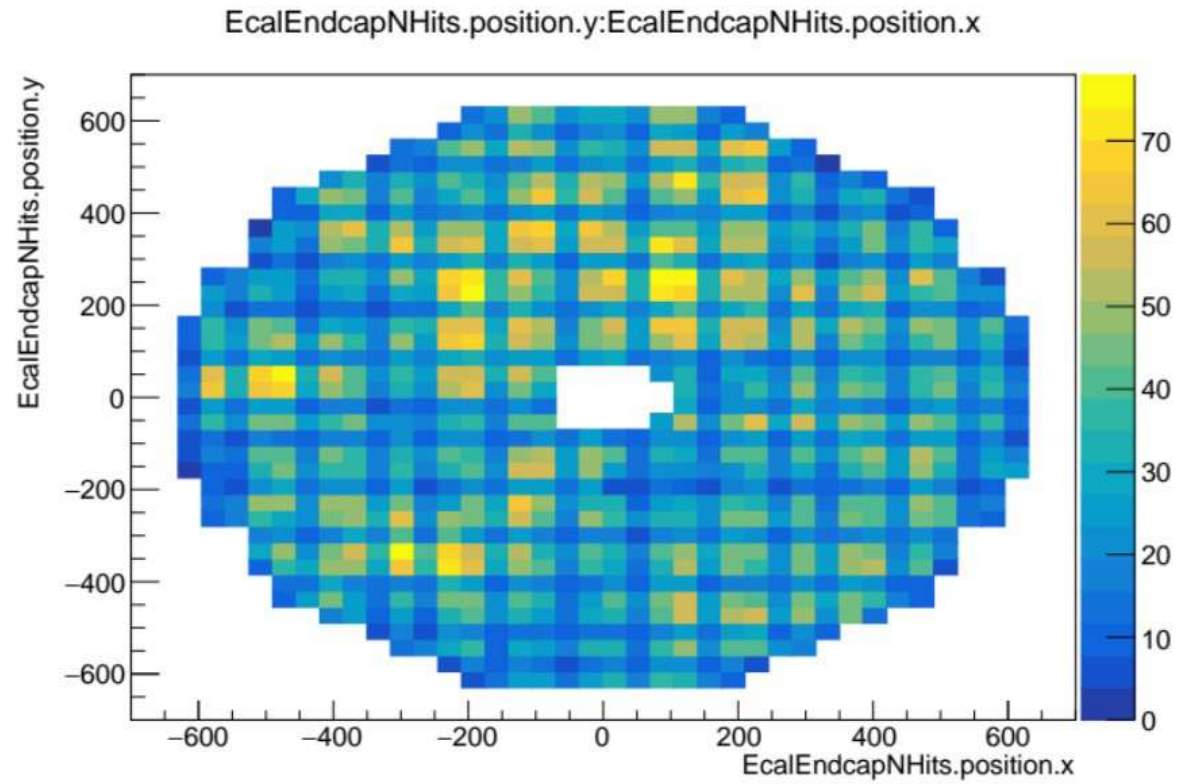

Inner and Outer supports were excluded.

Modules are placed in a 12 surface disk, with

Inner ring - 25 cm

Outer ring - 65 cm

Crystal

Width - 20.50 mm

Length - 200 mm

CarbonFiber thickness - 0.25 mm

VM2000 thickness - 0.13 mm

PCB thickness - 1.45 mm

Sensor (S14160 SiPM)

Size X - 6.85 mm

Size Y - 7.35 mm

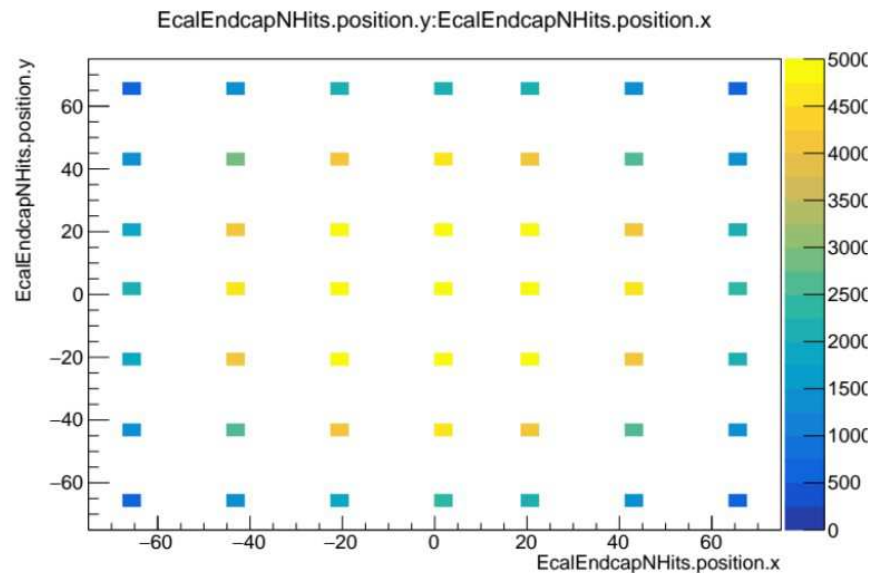

Spacing - 1 mm

Thickness - 1.45 mm

Matrix - 2x2

HomogeneousCalorimeter_geo.cpp and backward_PbWO4.xml have been modified to place modules in a matrix

5x5 Matrix is optimal for further analysis

Particle Gun

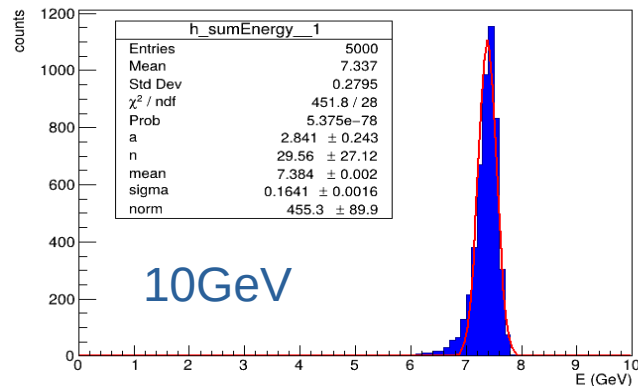

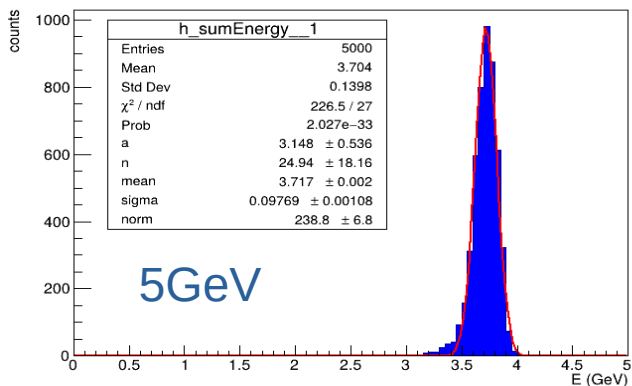

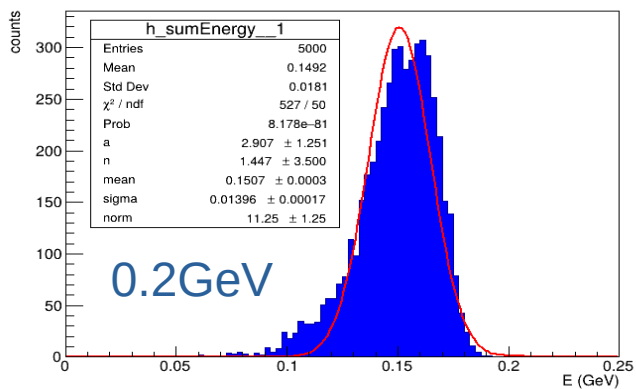

Position (0,0,-40mm)

Particle - e^-

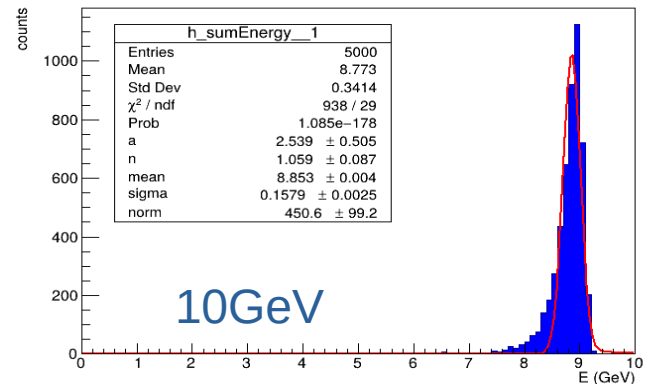

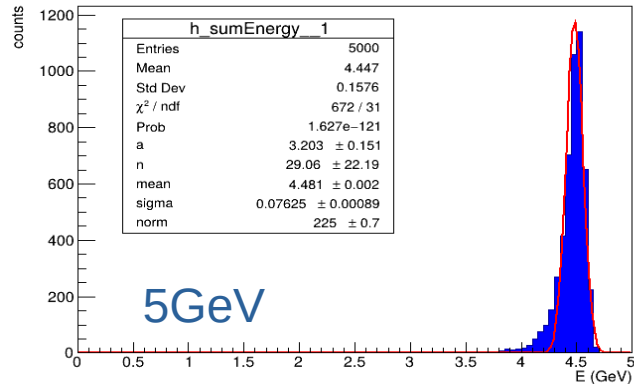

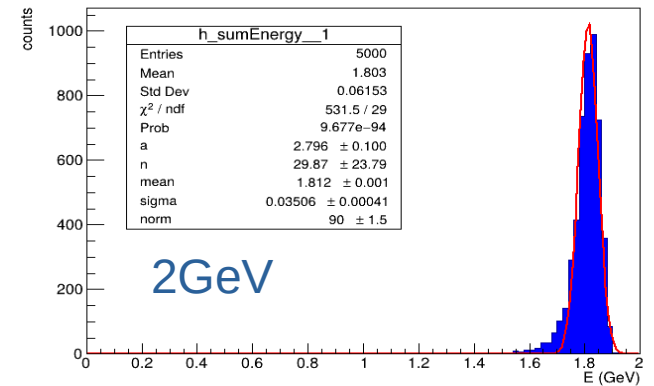

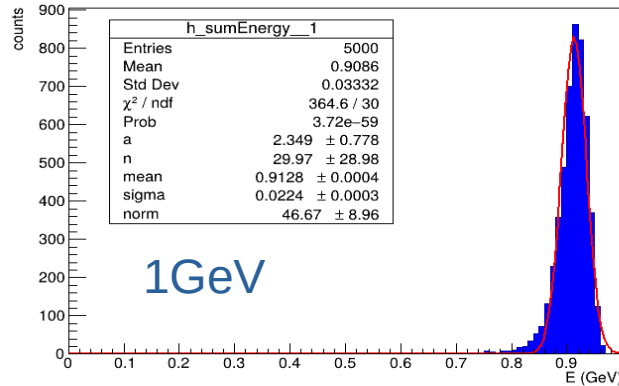

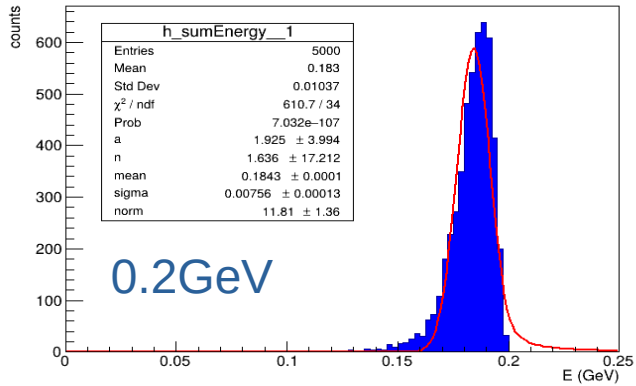

Energy (0.2 ,1 ,2 ,5 , 10)

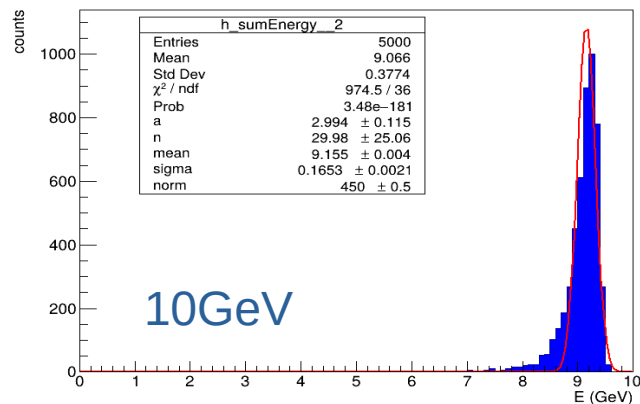

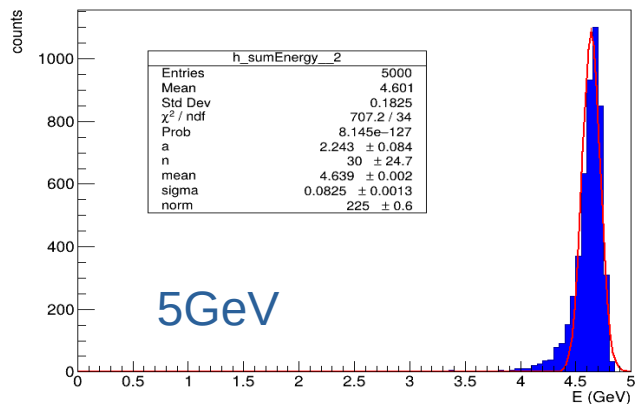

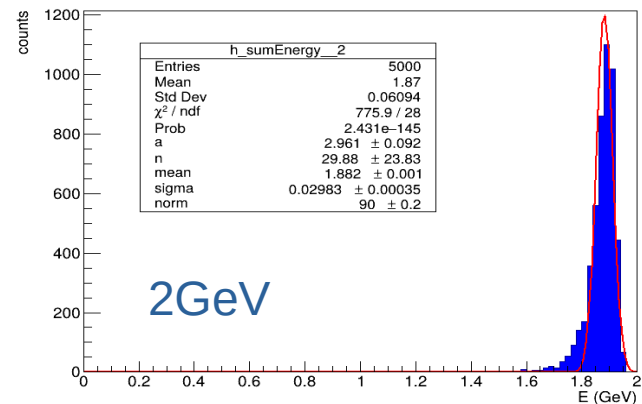

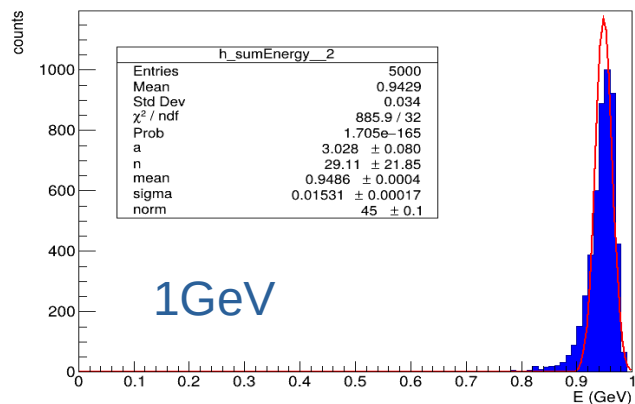

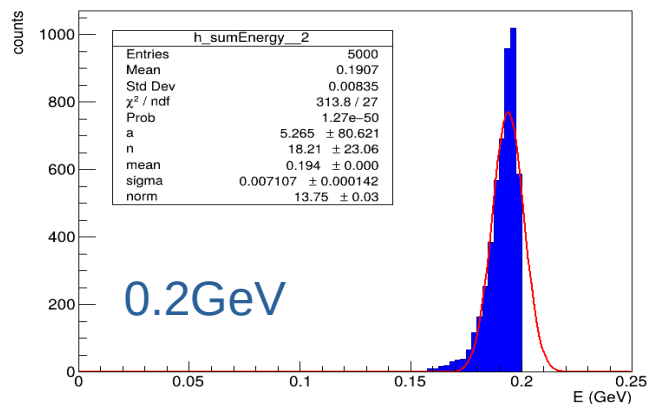

Deposited Energy for 1x1 Matrix for different Gun energies

Deposited Energy for 3x3 Matrix for different Gun energies

Deposited Energy for 5x5 Matrix for different Gun energies

Energy resolution for different Matrix
