# Analysis details

Two sets of simulations using **hepmc** files as input.

- HEPMC files (4662) located at:
  - <https://github.com/deepaksamuel/hepmc-drch-eic/blob/main/README.md>
- Each file (with fine kinematic bins) contains 2000 events but the simulation, due to time constraints, was done with the first 1000 events.
  - **PIDs:** [2212, 321 or 211]
  - **Momentum (74 bins):** [ 0.5, 1.0, 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 6.5, 7.0, 7.5, 8.0, 8.5, 9.0, 9.5, 10.0, 10.5, 11.0, 11.5, 12.0, 12.5, 13.0, 13.5, 14.0, 14.5, 15.0, 15.5, 16.0, 16.5, 17.0, 17.5, 18.0, 18.5, 19.0, 19.5, 20.0, 20.5, 21.0, 21.5, 22.0, 22.5, 23.0, 23.5, 24.0, 24.5, 25.0, 25.5, 26.0, 26.5, 27.0, 27.5, 28.0, 28.5, 29.0, 29.5, 30.0, 30.5, 31.0, 32.0, 34.0, 36.0, 38.0, 40.0, 42.0, 44.0, 46.0, 48.0, 50.0, 55.0, 60.0]
  - **Pseudorapidity:** [1.5-3.5] in 0.1 steps
    - Example 1.5  $\Rightarrow$  bin of 1.499 to 1.501

# Duration

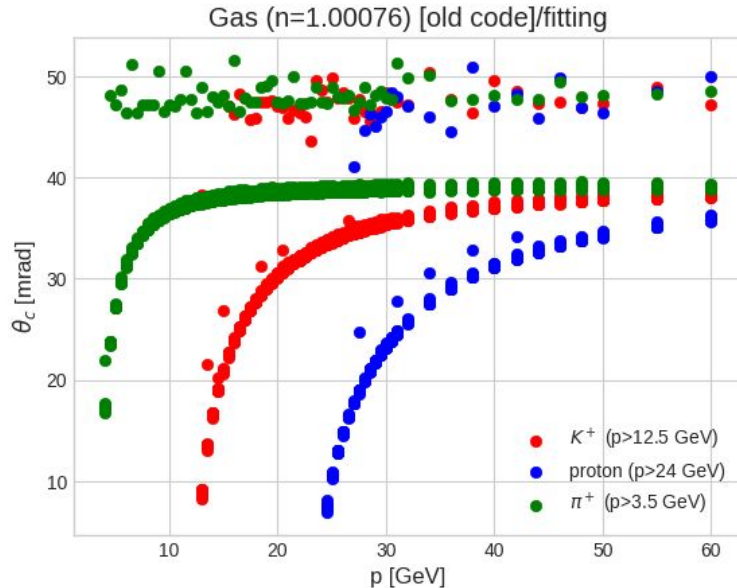

- It took about 5 days to complete both simulations for 1019 and 1026 each using 25 cores of the GPU@CUK
- Few files of simulations, reconstruction were retained without deleting:
  - ```
eta_retain = [0,11,21] #[1.5,2.5,3.5]  
mom_retain = [1,5,10,15,20,25,30,40,50,60]
```
- It was noticed later that eta\_bin 21 is not there since there are only 20 bins!

# Procedure for analysis

- For both gas and aerogel, the  $\theta_c$  and  $\Delta\theta_c$  histograms were analysed
- The mean and RMS/sigma of the histograms were obtained from two methods:
  - Statistical
  - **Gaussian Fitting**
- For gas, the histogram range was restricted to 50 for the  $\theta_c$  histograms
- Separation power:
  - **theta:** Mean from gaussian fit to  $\theta_c$
  - **sigma:** Sigma from gaussian fit to  $\theta_c$

$$N_\sigma = 2 \times \frac{\theta_c^\pi - \theta_c^k}{\sigma_c^\pi + \sigma_c^k}$$

eta: 3.1 shows a deviation from the usual trend (**for gas**)

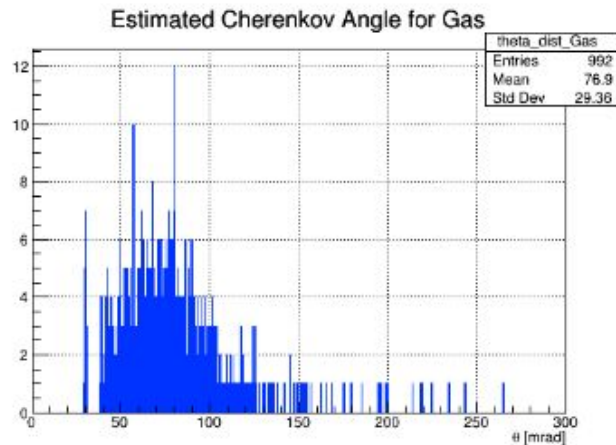

**Before removal of eta=3.1**

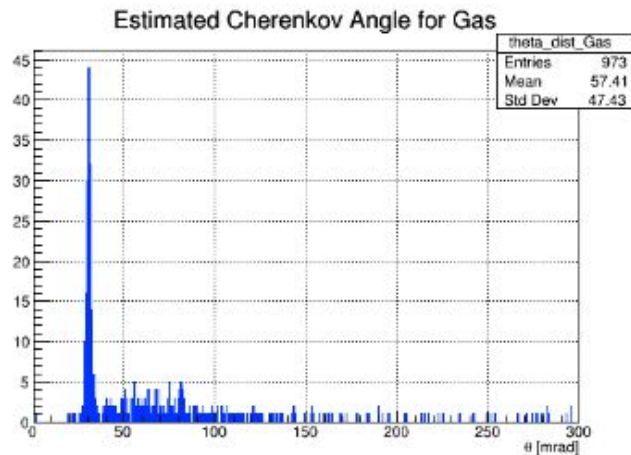

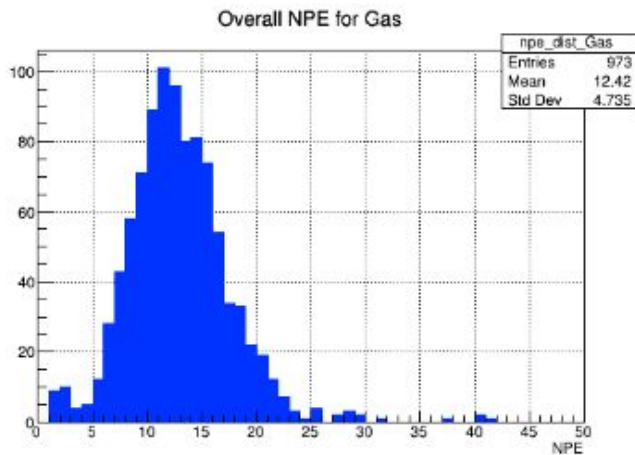

**After removal of eta=3.1**

*The same was observed in revised code with new aerogel parameters: the abnormal trend was observed for 3.1 and 3.2*

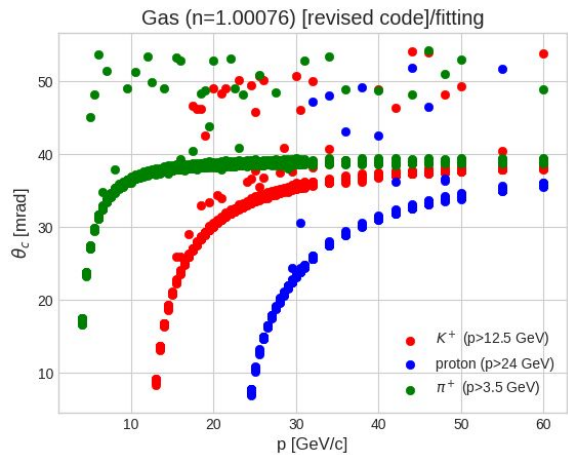

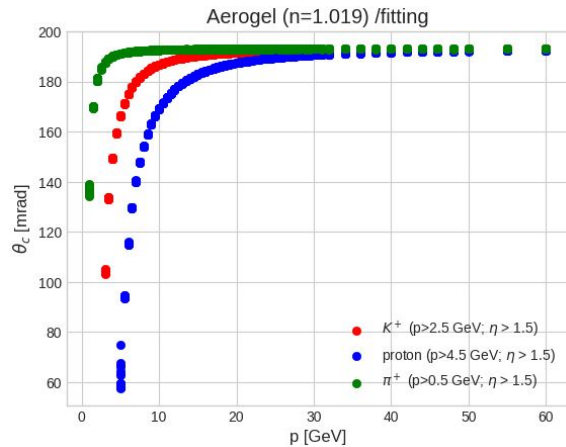

eta\_bin: 16
