- Though it is messy, it works, but:
 - Harder to make changes/revisions
 - Harder to teach others how to use it
- Backup the directory to sPHENIX Gitea
 - Allows proper version control
 - Allows recovery or reversion without needing the opc0 backup
- Identify which subroutines can be called using the DAQ `device_command` hook
 - Makes certain environment variables available (run number, file name)
 - Useful for tasks that write to database
