

AGS Status: Time meeting 5/27/25

- Booster setup of ions to NSRL proceeding well
- AGS Polarized proton work
 - Single resonance crossing user (user 8) set up for studies
- AGS Extraction bumps
 - G09 returned to service continues to operate well
 - H11 troubleshooting of modification continues on 'dummy load' (power load disconnected from ring magnets).
 - Decision Thursday 5/29 about whether to proceed with RHIC setup using both BLWs supplies or just G09.
- AGS extraction kicker (G10)
 - Pulsed at operating current, timing and amplitude issues addressed.
 - Some features (30 MHz signal on readback) probably not affecting the beam, to be investigated over time
