@BrookhavenLab

sPHENIX Status

- Along with a busy and successful week of RHIC & AGS Users' Meeting, 1008 Control Room shifters/experts have been finalizing all the operation and shift details.
 - ❖ During cosmic data taking, we have been optimizing data transfer and making sure that all cosmic data files are transferred to SDCC before the RHIC beams arrive.
- EMCAL group has updated the bias offsets to raise the saturation threshold from ~ 21 GeV to ~ 45 GeV.
- Chiller and AC's for 1008 haven't had problems for the last couple of weeks.
