

Recovery

- Complex went down last Tuesday due to a power pole issue on the main 69 kV feed
- Moved the repair up to Saturday morning, forcing a lot of work on every group to secure their systems for the power outage
- Repair was done in 90 minutes
- Cryo lost ~3k gallons of liquid helium when one of the 3 dewars lost its insulating vacuum.
- All groups were in Saturday to restore the machines
- Injectors had beam to NSRL and the W dump by Sunday morning
- Blue ring is cold, RHIC ps checkout to begin soon
- Yellow ring will be just short of inventory to get cold, cryo is working to get a delivery ASAP
- EBIS is back, Si and protons have been in the booster

Moving ahead

- ◉ Yellow cold
- ◉ PS checkout
- ◉ Back to physics ASAP
