

# STAR Status

- Good physics running over the last week
- STAR continues to run two modes
  - High luminosity for first 4 hours of fill, 100 kHz ZDC
  - Low luminosity for last 2 hours, 13 kHz with 1 mrad crossing angle
- $12.5 \text{ nb}^{-1}$  sampled by high- $p_T$  trigger ( $1.1 \text{ nb}^{-1}$  in last week)
- 4.51 billion min-bias events (470 million in last week)
