

# STAR Status

- Collected physics data through start of maintenance day Thursday
- Failed STAR HSSD components were replaced
- Using downtime to collect cosmic data for alignment with different magnetic field configurations
- $13.0 \text{ nb}^{-1}$  sampled by high- $p_T$  trigger ( $0.4 \text{ nb}^{-1}$  in last week)
- 4.67 billion min-bias events (160 million in last week)

Field Configuration	Hours of Cosmics
Full field	25
Half full field	16
Zero field	41
Reverse half field	41
Reverse full field	674
